DTMF_SEND v 0.921/20160607 - a-gsm 2.064 send DTMF example utility

COPYRIGHT (c) 2014-2016 Dragos Iosub / R&D Software Solutions srl

*****IMPORTANT NOTICE*****

"agsm_basic_lbr.h", "agsm_DTMF_lbr.ino" and "agsm_basic_lbr.h", "agsm_DTMF_lbr.ino"

ARE REQUIERED IN ORDER TO RUN THIS EXAMPLE!!!!!!!!!!!!!!

Download the "a-gsm kickstart for Arduino" from the itbrainpower.net download section.

Uncompress the archive and copy the files mentined above in the folder

where is this utility, then you can compile this code.

You may want to modify "destinationNumber" and other variables found at lines 41->46

*****END of NOTICE*****

*/

/*

In order to make the Arduino serial communication (especially for Arduino Uno) with a-gsm shield reliable you must

edit C:\Program Files\Arduino\libraries\SoftwareSerial\SoftwareSerial.h

comment at line 42

#define _SS_MAX_RX_BUFF 64 (will look like: //#define _SS_MAX_RX_BUFF 64)
and add at next line

#define _SS_MAX_RX_BUFF 128

You just increased increase the RX buffer size speed for UNO and other snails...

*/

//next 2 definition: leave them commented for standard conectivity over Software serial
//#define usejLader //un-comment this if you use micro and nano GSM 3G
adapter for ArduinoNano --Do not use it with a-gsm!!!
//#define HARDWARESERIAL //remove comment to use Serial1 for communication on
AT MEGA 2560...DUE..

//#define atDebug //uncomment this to debug serial communication with a-gsm

int DTMFlenght=100; //DTMF lenght in miliseconds - 90-100ms best value for manual
int DTMFpause=100; //pause lenght between DTMF in miliseconds - 90-100ms best value for
manual
//change next line to fit your destination number!
char destinationNumber[]=""; //usually phone number with International prefix eg. *40
for Romania
char message[]="ABCD0123456789*###"; //last 3 chars -*** are used as terminator
in DTMF_RECEIVE (take a look at DTMF_RECEIVE code)

```
