About the Document

History

Revision	Date	Author	Description
1.0	2014-08-28	Laguna XU/ Wythe WANG	Initial
1.1	2014-12-10	Roddick SUN/ Yolanda YAO/ Jessica GENG	1. Added AT Commands: ATS4/ATS3/+GOI/+QRIR/+QCFG/+QCCID/ +QSIMSTAT/+QSIMDET/+CTZR/+CTZU/ +QLTS/+QECCNUM/+QSCLK/+CALM/+CRSL/ +QAUDLOOP/+QDAC/+QLTONE/+QLDTMF/ +QWDTMF 2. Modified AT Commands: +VTS/+VTD/+CGDCONT/+CPBR 3. Updated the description of URC
1.2	2015-03-01	Bonnie ZHAO/ Jesse ZHANG	1. Changed the document name from "UG95" to "UGxx" 2. Added AT Commands: +QCMGS/+QCMGR/+QCFG="nwscanmode"/ +QCFG="fota/cid"/+QCFG="ussd/textescape"/ +QCFG="sms/textescape"
1.3	2015-04-01	Jesse ZHANG	Updated applicable modules
1.4	2015-05-21	Jesse ZHANG	1. Updated the description of AT+QSCLK 2. Added <number> description in AT+CPBF and AT+CPBW 3. Added AT Commands: +QCFG="vbatt"/+QCFG="temp"/+QCFG="rem oteip"

Contents

Table Index

1 Introduction

1.1. Scope of the Document

This document presents the AT Commands Set for Quectel cellular engine UGxx.

1.2. AT Command Syntax

The "**AT**" or "**at**" prefix must be set at the beginning of each command line. To terminate a command line enter **<CR>**. Commands are usually followed by a response that includes "**<CR><LF><response><CR><LF>**". Throughout this document, only the responses are presented, "**<CR><LF>**" are omitted intentionally.

The AT Commands Set implemented by UGxx is a combination of 3GPP TS 27.007, 3GPP TS 27.005 and ITU-T recommendation V.25ter and the AT Commands developed by Quectel.

All these AT commands can be split into three categories syntactically: "**basic**", "**S parameter**", and "**extended**". They are listed as follows:

● **Basic syntax**
These AT commands have the format of "**AT<x><n>**", or "**AT&<x><n>**", where "**<x>**" is the command, and "**<n>**" is/are the argument(s) for that command. An example of this is "**ATE<n>**", which tells the DCE whether received characters should be echoed back to the DTE according to the value of "**<n>**". "**<n>**" is optional and a default will be used if it is missing.

● **S parameter syntax**
These AT commands have the format of "**ATS<n>=<m>**", where "**<n>**" is the index of the **S** register to set, and "**<m>**" is the value to assign to it.

● **Extended syntax**
These commands can be operated in several modes, as following table:

Table 1: Types of AT Commands and Responses

Test Command	**AT+<*x*>=?**	This command returns the list of parameters and value ranges set by the corresponding Write Command or internal processes.
Read Command	**AT+<*x*>?**	This command returns the currently set value of the parameter or parameters.
Write Command	**AT+<x>=<…>**	This command sets the user-definable parameter values.
Execution Command	**AT+<x>**	This command reads non-variable parameters affected by internal processes in the UE.

1.3. Supported Character Sets

The AT command interface defaults to the **GSM** character set and supports the following character sets:

- GSM
- UCS2
- IRA
- HEX

The character set can be configured and interrogated by AT+CSCS command (3GPP TS 27.007). The character set is defined in 3GPP TS 27.005. The character set affects transmission and reception of SMS and SMS Cell Broadcast Messages, the entry and display of phone book entries text field.

1.4. AT Command Interface

The AT command interface includes three USB ports (USB MODEM port, USB AT port1 and USB AT port2) and one main UART port.

UART Port Feature:

The baud rates of 0, 300, 1200, 2400, 4800, 9600, 19200, 38400, 57600, 115200, 230400, 460800, 921600, 3000000, and 6000000 are supported at present. The default baud rate of main UART port is 0, which means the main UART port would be working on auto baud rate by default.

The main UART port supports hardware flow control lines RTS and CTS. But it is off by default. AT command AT+IFC=2,2 is used to enable hardware flow control.

1.5. Unsolicited Result Code

As an Unsolicited Result Code and a report message, URC is not issued as part of the response related to an executed AT command. URC is issued by the module without being requested by the TE and it is issued automatically when a certain event occurs. Typical events leading to URCs are incoming calls ("RING"), received short messages etc. The AT command AT+QCFG="urc/port" could list all available port(s) and current port. This command also can disable URC indication of a specified port.

1.6. Turn off Procedure

It is recommended to execute AT+QPOWD command to turn off the module, as it is the safest and best way. This procedure is realized by letting the module log off from the network and allowing the software to enter into a secure and safe data state before disconnecting the power supply.

After sending AT+QPOWD, do not enter any other AT commands. The module outputs message "POWERED DOWN" and sets the STATE pin as low to enter into the shutdown state. In order to avoid data loss, it is suggested to wait for 1s to switch off the VBAT after the STATE pin is set as low and the URC "POWERED DOWN" is outputted. If "POWERED DOWN" has not been received after 65s, you should force to switch off the VBAT.

2 General Commands

2.1. ATI Display Product Identification Information

The ATI command delivers a product information text.

ATI Display Product Identification Information	
Execution Command **ATI**	Response TA issues product information text. **Quectel** **UGxx** **Revision: <revision>** **OK**
Maximum Response Time	300ms
Reference V.25ter	

Parameter

<revision>   Revision of software release

Example

ATI
Quectel
UGxx
Revision: UGxxENAR01A01E1G

OK

2.2. AT+GMI   Request Manufacturer Identification

AT+GMI returns a manufacturer identification text. Command is identical with AT+CGMI.

AT+GMI Request Manufacturer Identification	
Test Command **AT+GMI=?**	Response **OK**
Execution Command **AT+GMI**	Response TA reports one or more lines of information text which permit the user to identify the manufacturer. **Quectel** **OK**
Reference V.25ter	

2.3. AT+GMM   Request TA Model Identification

AT+GMM returns a product model identification text. Command is identical with AT+CGMM.

AT+GMM Request TA Model Identification	
Test Command **AT+GMM=?**	Response **OK**
Execution Command **AT+GMM**	Response TA returns a product model identification text. **UGxx** **OK**
Reference V.25ter	

2.4. AT+GMR   Request TA Revision Identification of Software Release

AT+GMR delivers a product firmware version identification. Command is identical with AT+CGMR.

AT+GMR Request TA Revision Identification of Software Release	
Test Command **AT+GMR=?**	Response **OK**

Execution Command	Response
AT+GMR	TA reports one or more lines of information text which permit the user to identify the revision of software release.
	\<revision\>
	OK
Reference	
V.25ter	

Parameter

\<revision\>	Revision of software release

2.5. AT+GOI   Request Global Object Identification

AT+GOI Request Global Object Identification	
Test Command	Response
AT+GOI=?	**OK**
Execution Command	Response
AT+GOI	TA reports one or more lines of information text which permit the user to identify the device, based on the ISO system for registering unique object identifiers.
	\<Object Id\>
	OK
Reference	
V.25ter	

Parameter

\<Object Id\>	Identifier of device type

Example

```
AT+GOI
UGxx

OK
```

2.6. AT+CGMI   Request Manufacturer Identification

AT+CGMI returns a manufacturer identification text.

AT+CGMI Request Manufacturer Identification	
Test Command **AT+CGMI=?**	Response **OK**
Execution Command **AT+CGMI**	Response TA returns manufacturer identification text. **Quectel** **OK**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

2.7. AT+CGMM   Request Model Identification

AT+CGMM returns a product model identification text.

AT+CGMM Request Model Identification	
Test Command **AT+CGMM=?**	Response **OK**
Execution Command **AT+CGMM**	Response TA returns product model identification text. **UGxx** **OK**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

2.8. AT+CGMR   Request TA Revision Identification of Software Release

AT+CGMR delivers a product firmware version identification.

AT+CGMR Request TA Revision Identification of Software Release	
Test Command **AT+CGMR=?**	Response **OK**
Execution Command **AT+CGMR**	Response TA returns identification text of product software version. **\<revision\>** **OK**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

\<revision\>	Identification text of product software version

2.9. AT+GSN   Request International Mobile Equipment Identity (IMEI)

AT+GSN returns the International Mobile Equipment Identity (IMEI). Command is identical with AT+CGSN.

AT+GSN Request International Mobile Equipment Identity (IMEI)	
Test Command **AT+GSN=?**	Response **OK**
Execution Command **AT+GSN**	Response TA reports the IMEI (International Mobile Equipment Identity) number in information text which permit the user to identify the individual ME device. **\<IMEI\>** **OK**
Maximum Response Time	300ms
Reference V.25ter	

Parameter

<IMEI>	IMEI of the telephone

NOTE

The serial number (IMEI) varies with the individual ME device.

2.10. AT+CGSN   Request Product Serial Number Identification

AT+CGSN returns International Mobile Equipment Identity (IMEI). Command is identical with AT+GSN.

AT+CGSN Request Product Serial Number Identification	
Test Command **AT+CGSN=?**	Response **OK**
Execution Command **AT+CGSN**	Response **<IMEI>** **OK**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

2.11. AT&F   Set all Current Parameters to Manufacturer Defaults

AT&F resets AT command settings to their factory default values. However, the command does not change the current baud rate of UART.

AT&F Set all Current Parameters to Manufacturer Defaults	
Execution Command **AT&F[<value>]**	Response TA sets all current parameters to the manufacturer defined profile. See Table 7: Factory Default Settings Restorable with AT&F. **OK**
Maximum Response Time	300ms

Reference	
V.25ter	

Parameter

<value>	0	Set all TA parameters to manufacturer defaults

2.12. AT&V Display Current Configuration

AT&V displays three profiles of several AT command parameters, including the single-letter AT command parameters which are not readable otherwise.

AT&V Display Current Configuration	
Execution Command **AT&V**	Response TA returns the current parameter setting. See Table 2: AT&V Response. **OK**
Maximum Response Time	300ms
Reference V.25ter	

Table 2: AT&V Response

AT&V
&C: 1
&D: 1
&F: 0
&W: 0
E: 1
Q: 0
V: 1

X: 4

Z: 0

S0: 0

S5: 8

S6: 2

S7: 0

S8: 2

S10: 15

OK

2.13. AT&W   Store Current Parameters to User Defined Profile

AT&W stores the current AT command settings to a user defined profile in non-volatile memory.

AT&W Store Current Parameters to User Defined Profile	
Execution Command **AT&W[<n>]**	Response TA stores the current parameter settings in the user defined profile. See Table 8: AT Command Settings Storable with AT&W. **OK**
Maximum Response Time	300ms
Reference V.25ter	

Parameter

<n>	<u>0</u>	Profile 0 to store current parameters

2.14. ATZ   Set all Current Parameters to User Defined Profile

ATZ restores the current AT command settings to the user defined profile in non-volatile memory, if one was stored with AT&W before. Any additional AT command on the same command line may be ignored. ATZ does not change the current baud rate of UART.

ATZ Set all Current Parameters to User Defined Profile	
Execution Command **ATZ[<value>]**	Response TA sets all current parameters to the user defined profile. See Table 9: AT Command Settings Storable with ATZ. **OK**
Maximum Response Time	300ms
Reference V.25ter	

Parameter

<value>	0	Reset to profile number 0

2.15. ATQ   Set Result Code Presentation Mode

ATQ controls whether the result code is transmitted to the CE. Other information text transmitted as response is not affected.

ATQ Set Result Code Presentation Mode	
Execution Command **ATQ<n>**	Response This parameter setting determines whether or not the TA transmits any result code to the TE. Information text transmitted in response is not affected by this setting. If **<n>**=0: **OK** If **<n>**=1: (none)
Maximum Response Time	300ms
Reference V.25ter	

Parameter

| **<n>** | 0 | TA transmits result code |
| | 1 | Result codes are suppressed and not transmitted |

2.16. ATV   TA Response Format

This command determines the contents of header and trailer transmitted with AT command result codes and information responses.

The result codes, their numeric equivalents and brief descriptions are listed in the following table.

ATV TA Response Format	
Execution Command **ATV<value>**	Response This parameter setting determines the contents of the header and trailer transmitted with result codes and information responses. When **<value>**=0 **0** When **<value>**=1 **OK**
Maximum Response Time	300ms
Reference V.25ter	

Parameter

<value>	0	Information response: **<text><CR><LF>**
		Short result code format: **<numeric code><CR>**
	1	Information response: **<CR><LF><text><CR><LF>**
		Long result code format: **<CR><LF><verbose code><CR><LF>**

Example

ATV1	//Set **<value>**=1
OK	
AT+CSQ	
+CSQ: 30,0	
OK	//When **<value>**=1 result code is OK

```
ATV0                                              //Set <value>=0
0
AT+CSQ
+CSQ: 30,0
0                                                 //When <value>=0 result code is 0
```

Table 3: ATV0&ATV1 Result Codes Numeric Equivalents and Brief Description

ATV1	ATV0	Description
OK	0	Acknowledges execution of a command
CONNECT	1	A connection has been established; the DCE is moving from command state to online data state
RING	2	The DCE has detected an incoming call signal from network
NO CARRIER	3	The connection has been terminated or the attempt to establish a connection failed
ERROR	4	Command not recognized, command line maximum length exceeded, parameter value invalid, or other problem with processing the command line
NO DIALTONE	6	No dial tone detected
BUSY	7	Engaged (busy) signal detected
NO ANSWER	8	"@" (Wait for Quiet Answer) dial modifier was used, but remote ringing followed by five seconds of silence was not detected before expiration of the connection timer (S7)

2.17. ATE   Set Command Echo Mode

ATE controls whether the module echoes characters received from TE during AT command state.

ATE Set Command Echo Mode	
Execution Command **ATE<value>**	Response This setting determines whether or not the TA echoes characters received from TE during command state. **OK**
Maximum Response Time	300ms
Reference V.25ter	

Parameter

<value>	0	Echo mode off
	<u>1</u>	Echo mode on

2.18. A/   Repeat Previous Command Line

A/ repeats previous AT command line, and "/" acts as the line terminating character.

A/ Repeat Previous Command Line	
Execution Command **A/**	Response Repeat Previous Command
Reference V.25ter	

Example

ATI
Quectel
UGxx
Revision: UGxxENAR01A01E1G

OK
A/   //Repeat previous command
Quectel
UGxx
Revision: UGxxENAR01A01E1G

OK

2.19. ATS3   Set Command Line Termination Character

ATS3 determines the character recognized by the module to terminate an incoming command line. It is also generated for result codes and information text, along with character value set via ATS4.

ATS3 Set Command Line Termination Character	
Read Command **ATS3?**	Response **<n>**

	OK
Write Command **ATS3=<n>**	Response This parameter setting determines the character recognized by TA to terminate an incoming command line. The TA also returns this character in output. **OK**
Maximum Response Time	300ms
Reference V.25ter	

Parameter

<n>   0-<u>13</u>-127   Command line termination character (Default 13=**<CR>**)

2.20. ATS4   Set Response Formatting Character

ATS4 determines the character generated by the module for result code and information text, along with the command line termination character set via ATS3.

ATS4 Set Response Formatting Character	
Read Command **ATS4?**	Response **<n>** **OK**
Write Command **ATS4=<n>**	Response This parameter setting determines the character generated by the TA for result code and information text. **OK**
Maximum Response Time	300ms
Reference V.25ter	

Parameter

<n>   0-<u>10</u>-127   Response formatting character (Default 10=**<LF>**)

2.21. ATS5　Set Command Line Editing Character

ATS5 determines the character value used by the module to delete the immediately preceding character from the AT command line (i.e. equates to backspace key).

ATS5　Set Command Line Editing Character	
Read Command **ATS5?**	Response **<n>** **OK**
Write Command **ATS5=<n>**	Response This parameter setting determines the character recognized by TA as a request to delete the immediately preceding character from the command line. **OK**
Maximum Response Time	300ms
Reference V.25ter	

Parameter

<n>	0-8-127	Response editing character (Default 008=**<Backspace>**)

2.22. ATX　Set CONNECT Result Code Format and Monitor Call Progress

ATX determines whether or not the module transmits particular result codes to the TE. It also controls whether or not the module verifies the presence of a dial tone when it begins dialing, and whether or not engaged tone (busy signal) detection is enabled.

ATX　Set CONNECT Result Code Format and Monitor Call Progress	
Execution Command **ATX<value>**	Response This parameter setting determines whether or not the TA detected the presence of dial tone and busy signal and whether or not TA transmits particular result codes. **OK**
Maximum Response Time	300ms
Reference V.25ter	

Parameter

<value>	0	**CONNECT** result code only returned, dial tone and busy detection are both disabled
	1	**CONNECT<text>** result code only returned, dial tone and busy detection are both disabled
	2	**CONNECT<text>** result code returned, dial tone detection is enabled, busy detection is disabled
	3	**CONNECT<text>** result code returned, dial tone detection is disabled, busy detection is enabled
	4	**CONNECT<text>** result code returned, dial tone and busy detection are both enabled

2.23. AT+CFUN Set Phone Functionality

AT+CFUN controls the functionality level. It can also be used to reset the UE.

AT+CFUN Set Phone Functionality	
Test Command **AT+CFUN=?**	Response **+CFUN:** (list of supported **<fun>**s),(list of supported **<rst>**s) **OK**
Read Command **AT+CFUN?**	Response **+CFUN: <fun>** **OK**
Write Command **AT+CFUN=<fun>[,<rst>]**	Response **OK** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	15s, determined by network.
Reference 3GPP TS 27.007	

Parameter

<fun>	0	Minimum functionality
	1	Full functionality (Default)
	4	Disable phone both transmit and receive RF circuits
<rst>	0	Do not reset the ME before setting it to **<fun>** power level
		This is default when **<rst>** is not given

1	Reset the ME. The device is fully functional after the reset.

Example

AT+CFUN=0	//Switch phone to minimum functionality
OK	
AT+COPS?	
+COPS: 0	//No operator is registered
OK	
AT+CPIN?	
+CME ERROR: 10	//SIM is not inserted
AT+CFUN=1	//Switch phone to full functionality
OK	
+QUSIM: 0	
+CPIN: SIM PIN	
AT+CPIN=1234	
OK	
+CPIN: READY	
+QIND: SMS DONE	
+QIND: PB DONE	
AT+CPIN?	
+CPIN: READY	
OK	
AT+COPS?	
+COPS: 0,0,"CHN-UNICOM",2	//Operator is registered
OK	

2.24. AT+CMEE   Error Message Format

AT+CMEE controls the format of error result codes: "**ERROR**", error numbers or verbose messages as "**+CME ERROR: <err>**" and "**+CMS ERROR: <err>**".

AT+CMEE   Error Message Format

Test Command AT+CMEE=?	Response +CMEE: (list of supported **<n>**s) OK
Read Command AT+CMEE?	Response +CMEE: <n> OK
Write Command AT+CMEE=<n>	Response TA disables or enables the use of result code **+CME ERROR: <err>** as an indication of an error related to the functionality of the ME. OK
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<n>	0	Disable result code
	1	Enable result code and use numeric values
	2	Enable result code and use verbose values

Example

```
AT+CMEE=0                          //Disable result code
OK
AT+CPIN=1234
ERROR                              //Only "ERROR" will be displayed
AT+CMEE=1                          //Enable error result code with numeric values
OK
AT+CPIN=1234
+CME ERROR: 10
AT+CMEE=2                          //Enable error result code with verbose (string) values
OK
AT+CPIN=1234
+CME ERROR: SIM not inserted
```

2.25. AT+CSCS   Select TE Character Set

AT+CSCS write command informs the module which character set is used by the TE. It enables the UE to convert character strings correctly between TE and UE character sets.

AT+CSCS Select TE Character Set	
Test Command **AT+CSCS=?**	Response **+CSCS:** (list of supported **<chset>**s) **OK**
Read Command **AT+CSCS?**	Response **+CSCS: <chset>** **OK**
Write Command **AT+CSCS=<chset>**	Response Set character set **<chset>** which is used by the TE. The TA can then convert character strings correctly between the TE and ME character sets. **OK**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<chset>	"UCS2"	UCS2 alphabet
	"IRA"	International reference alphabet
	"HEX"	UCS2 alphabet
	"GSM"	GSM default alphabet

Example

AT+CSCS?	//Query the current character set
+CSCS: "GSM"	
OK	

3 Serial Interface Control Commands

3.1. AT&C Set DCD Function Mode

AT&C controls the behavior of the UE's DCD line.

AT&C Set DCD Function Mode	
Execution Command **AT&C[<value>]**	Response This parameter determines how the state of circuit 109 (DCD) relates to the detection of received line signal from the distant end. **OK**
Maximum Response Time	300ms
Reference V.25ter	

Parameter

<value>	0	DCD line is always ON
	1	DCD line is ON only in the presence of data carrier

3.2. AT&D Set DTR Function Mode

AT&D determines how the UE responds if DTR line is changed from the ON to the OFF condition during online data mode.

AT&D Set DTR Function Mode	
Execution Command **AT&D[<value>]**	Response This parameter determines how the TA responds when circuit 108/2 (DTR) is changed from the ON to the OFF condition during data mode. **OK**

Maximum Response Time	300ms
Reference V.25ter	

Parameter

<value>	0	TA ignores status on DTR
	<u>1</u>	ON->OFF on DTR: Change to command mode with remaining the connected call
	2	ON->OFF on DTR: Disconnect data call, change to command mode. During state DTR=OFF, auto-answer function is disabled

3.3. AT+IFC   Set TE-TA Local Data Flow Control

AT+IFC determines the flow control behavior of the serial port.

AT+IFC Set TE-TA Local Data Flow Control	
Test Command **AT+IFC=?**	Response **+IFC:** (list of supported **<dce_by_dte>**s),(list of supported **<dte_by_dce>**s) **OK**
Read Command **AT+IFC?**	Response **+IFC: <dce_by_dte>,<dte_by_dce>** **OK**
Write Command **AT+IFC=<dce_by_dte>,<dte_by_dce>**	Response This parameter setting determines the data flow control on the serial interface for data mode. **OK**
Maximum Response Time	300ms
Reference V.25ter	

Parameter

<dce_by_dte>		Specifies the method will be used by TE when receiving data from TA
	<u>0</u>	None
	2	RTS flow control
<dte_by_dce>		Specifies the method will be used by TA when receiving data from TE

0	None
2	CTS flow control

> **NOTE**
>
> This flow control is applied for data mode.

Example

AT+IFC=2,2	//Open the hardware flow control
OK	
AT+IFC?	
+IFC: 2,2	
OK	

3.4. AT+IPR   Set TE-TA Fixed Local Rate

AT+IPR is used to query and set the baud rate of the UART. The default baud rate value (**<rate>**) is 0bps. **<rate>** setting will not be restored with AT&F.

AT+IPR Set TE-TA Fixed Local Rate	
Test Command **AT+IPR=?**	Response **+IPR:** (list of supported auto detectable **<rate>**s),(list of supported fixed-only**<rate>**s) **OK**
Read Command **AT+IPR?**	Response **+IPR: <rate>** **OK**
Write Command **AT+IPR=<rate>**	Response This parameter setting determines the data rate of the TA on the serial interface. After the delivery of any result code associated with the current command line, the rate of command takes effect. **OK**
Maximum Response Time	300ms
Reference V.25ter	

Parameter

<rate>	Baud rate of per second
	<u>0</u>
	300
	1200
	2400
	4800
	9600
	19200
	38400
	57600
	115200
	230400
	460800
	921600
	3000000
	6000000

NOTES

1. If a fixed baud rate is set, make sure that both TE (DTE, usually external processor) and TA (DCE, Quectel module) are configured to the same rate.
2. If **IPR** is set to 0, it will change module to auto baudrate.
3. The value of **AT+IPR** cannot be restored with **AT&F** and **ATZ**.
4. A selected baud rate takes effect after the write commands are executed and acknowledged by "**OK**".

Example

AT+IPR=115200	//Set fixed baud rate to 115200
OK	
AT+IPR?	
+IPR: 115200	
OK	

3.5. AT+QRIR   Restore Ring Line to Inactive

If the behavior of ring line is "always", you should restore ring line to inactive by AT+QRIR. The behavior of ring line is controlled by AT+QCFG. Please refer to AT+QCFG="urc/ri/ring", AT+QCFG="urc/ri/other" and AT+QCFG="urc/ri/smsincoming".

AT+QRIR   Restore Ring Line to Inactive

Test Command **AT+QRIR=?**	Response **OK**	
Execution Command **AT+QRIR**	Response **OK** **ERROR**	
Maximum Response Time	300ms	

4 Status Control Commands

4.1. AT+CPAS   Mobile Equipment Activity Status

AT+CPAS execute command queries the module's activity status.

AT+CPAS Mobile Equipment Activity Status	
Test Command **AT+CPAS=?**	Response **+CPAS:** (list of supported **<pas>**s) **OK**
Execution Command **AT+CPAS**	Response TA returns the activity status of ME. **+CPAS: <pas>** **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<pas>	0	Ready
	2	Unknown
	3	Ringing
	4	Call in progress or call hold

Example

AT+CPAS
+CPAS: 0   //Module is idle

```
OK
ATD10086;
OK
AT+CLCC
+CLCC: 1,0,3,0,0,"10086",129

OK
AT+CPAS
+CPAS: 3                                    //Module is ringing

OK
AT+CLCC
+CLCC: 1,0,0,0,0,"10086",129

OK
AT+CPAS
+CPAS: 4                                    //Call in progress

OK
```

4.2. AT+CEER   Extended Error Report

AT+CEER provides an extended report of 1 line about categorized error causes, such as:

- +CEER: "No report available"
- +CEER: "CC setup error",1,"Unassigned (unallocated) number"
- +CEER: "SM detach",0,"No cause information available"

AT+CEER Extended Error Report	
Test command **AT+CEER=?**	Response **OK**
Execution command **AT+CEER**	Response In case of CC and SM categories: **+CEER: <category>[,<cause>,<descriptions>]** In case of SS category network error cause: **+CEER: <category>,<cause>[,<tag>]** **OK** **ERROR**

	If error is related to ME functionality: **+CME ERROR: \<err\>**
Maximum Response Time	300ms

Parameter

\<category\>	"No report available" "CC setup error" "CC modification error" "CC release" "SM attach error" "SM detach" "SM activation error" "SM deactivation" "SS network error cause" "SS network reject cause" "SS network GSM cause"
\<cause\>	Contains a digit representing the error cause sent by network or internally. Refer to Table 13: Cause and Description List of AT+CEER.
\<descriptions\>	A verbose string containing the textual representation. Refer to Table 13: Cause and Description List of AT+CEER.
\<tag\>	SS error tag in 3GPP TS 24.008

4.3. AT+QCFG   Extended Configuration Settings

AT+QCFG is used to query and configure various settings of module.

AT+QCFG Extended Configuration Settings	
Test Command **AT+QCFG=?**	Response **+QCFG: "urc/port",** (list of supported **\<enable\>**s), (list of supported **\<port_name\>**s) **+QCFG: "uart/power",** (list of supported **\<uart\>**s), (list of supported **\<mode\>**s) **+QCFG: "urc/ri/ring",** (list of supported **\<typeri\>**s)**,** (list of supported **\<pulse_duration\>**s)**,** (list of supported **\<active_duration\>**s)**,** (list of supported **\<inactive_duration\>**s)**,** (list of supported **\<ring_no_disturbing\>**s)**,**

	(list of supported **<pulse_count>**s)
	+QCFG: "urc/ri/smsincoming",
	(list of supported **<typeri>**s)**,**
	(list of supported **<pulse_duration>**s)**,**
	(list of supported **<pulse_count>**s)
	+QCFG: "urc/ri/other",
	(list of supported **<typeri>**s)**,**
	(list of supported **<pulse_duration>**s)**,**
	(list of supported **<pulse_count>**s)
	+QCFG: "urc/delay",
	(list of supported **<enable>**s)
	+QCFG: "tone/incoming",
	(list of supported **<value>**s)
	+QCFG: "vbatt",
	((list of supported **<vbatt_type>**s)**,**
	(list of supported **<vbatt_value>**s)**,**
	(list of supported **<vbatt_on_off>**s))
	+QCFG: "nwscanmode",
	(list of supported **<scan_mode>**s),
	(list of supported **<effect>**s)
	+QCFG: "fota/cid",
	(list of supported **<contextID>**s)
	+QCFG: "ussd/textescape",
	(list of supported **<enable>**s)
	+QCFG: "sms/textescape",
	(list of supported **<enable>**s)
	OK
Maximum Response Time	300ms
Reference	

4.3.1. AT+QCFG="urc/port"　List All Port (s) or Disable URC of Specified Port

AT+QCFG="urc/port" lists all available port (s) and current port. It can also disable URC indication of a specified port.

AT+QCFG="urc/port"　Display All Port (s) and Disable URC of Specified Port	
Write Command **AT+QCFG="urc/port"[,<enable>[,<port_name>]]**	Response If configuration parameters are omitted: **+QCFG: "urc/port",<enable>,<port_name><port_type>** **+QCFG: "urc/port",<enable>,<port_name><port_type>** **[......]**

	OK
	If configuration parameters are entered: **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Reference	

Parameter

<enable>	0	Disable URC indication of the port
	<u>1</u>	Enable URC indication of the port
<port_name>	A string to describe port name	
<port_type>	0	Current port
	1	Available port

4.3.2. AT+QCFG="uart/power" Turn on/off the UART Port

AT+QCFG="uart/power" Turn on/off the UART Port	
Write Command **AT+QCFG="uart/power"[,<mode>]**	Response If <mode> is omitted: **+QCFG: "uart/power",<uart>,<mode>** **OK** If <mode> is not omitted: **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Reference	

Parameter

<uart>	0	UART 1
	1	UART 3

<mode>	0	Auto turn on/off the UART port
	1	Turn on the UART port
	2	Turn off the UART port

NOTE

The UART 3 does not support mode 0.

4.3.3. AT+QCFG="urc/ri/ring"   Ring Line Behavior of RING

AT+QCFG="urc/ri/ring",   AT+QCFG="urc/ri/smsincoming"   and   AT+QCFG="urc/ri/other"   control   the behavior of ring line when URC is reported. These configurations will be stored into NV automatically. The ring line is active low. AT+QCFG="urc/ri/ring" specifies the behavior of ring line when RING is presented to indicate an incoming call.

The   sum   of   parameter   **<active_duration>** and **<inactive_duration>** determines   the   interval   time   of "RING" indications when a call is coming.

AT+QCFG="urc/ri/ring" Ring Line Behavior of RING	
Write Command **AT+QCFG="urc/ri/ring"[,<typeri>[,<pulse_duration>[,<active_duration>[,<inactive_duration>[,<ring_no_disturbing>]]]]]**	Response If configuration parameters are omitted (**+QCFG="urc/ri/ring"**), return current configuration: **+QCFG:** **"urc/ri/ring",<typeri>,<pulse_duration>,<active_duration>,<inactive_duration>,<ring_no_disturbing>,<pulse_count>** **OK** If configuration parameters are entered: **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms

Parameter

<typeri>	The behavior of the ring line when URCs are presented	
	"off"	No change. Ring line keeps inactive

	"pulse"	Pulse. Pulse width determined by **<pulse_duration>**
	"always"	Change to active. You may restore to inactive by **+QRIR**
	"auto"	When "RING" is presented to indicate an incoming call, ring line changes to and keeps active. When ring of the incoming call ends, either answering or hanging up the incoming call, ring line will change to inactive.
	"wave"	When "RING" is presented to indicate an incoming call. The ring line outputs a square wave. Both **<active_duration>** and **<inactive_duration>** are used to set parameters of the square wave. When the ring of incoming call ends, either answering or hanging up the incoming call, ring line will change to inactive.
<pulse_duration>		Set the width of pulse. Value ranges from 1 to 2000ms and default is 120ms This parameter is only meaningful when **<typeri>** is "pulse". If this parameter is not needed, you can set it as null.
<active_duration>		Set the active duration of the square wave, value ranges from 1 to 10000ms, and the default is 1000ms.This parameter is only meaningful when **<typeri>** is "wave".
<inactive_duration>		Set the inactive duration of the square wave, value ranges from 1 to 10000ms, and the default is 3000ms. This parameter is only meaningful when **<typeri>** is "wave".
<ring_no_disturbing>		Set whether the ring line behavior could be disturbed. This parameter is only meaningful when **<typeri>** is configured to "auto" or "wave". For example, when **<typeri>** is configured to "wave", if you need the square wave not to be disturbed by other URCs (including SMS related URCs), you should set **<ring_no_disturbing>** to "on".
	"off"	It can be disturbed by other URCs which the behavior of ring line is caused by an incoming call ringing.
	"on"	It cannot be disturbed by other URCs which the behavior of ring line is caused by an incoming call ringing.
<pulse_count>		The count of pulse. This parameter is only meaningful when **<typeri>** is "pulse".
		Value ranges from 1 to 5 and default is 1. The interval time between two pulses is equal to **<pulse_duration>**.

4.3.4. AT+QCFG="urc/ri/smsincoming"   Ring Line Behavior of Incoming SMS

AT+QCFG="urc/ri/smsincoming" specifies the behavior of ring line when related incoming message URCs are presented. Related incoming message URCs list: **+CMTI,+CMT,+CDS,+CBM**.

AT+QCFG="urc/ri/smsincoming" Ring Line Behavior of Incoming SMS	
Write Command **AT+QCFG="urc/ri/smsincoming"[,<typeri>[,<pulse_duration>]]**	Response If configuration parameters are omitted (**+QCFG="urc/ri/smsincoming"**), return current configuration: **+QCFG: "urc/ri/smsincoming",<typeri>,<pulse_duration>,<pulse_count>** **OK** If configuration parameters are entered: **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms

Parameter

<typeri>	The behavior of the ring line when URC are presented
	"off" No change. Ring line keeps inactive
	"pulse" Pulse. Pulse width determined by **<pulse_duration>**
	"always" Change to active. You should restore to inactive by **+QRIR**
<pulse_duration>	Set the width of pulse. Value ranges from 1 to 2000ms and the default is 120ms. This parameter is only valid when **<typeri>** is "pulse".
<pulse_count>	The count of pulse. This parameter is only meaningful when **<typeri>** is "pulse". Value ranges from 1 to 5 and default is 1. The interval time between two pulses is equal to **<pulse_duration>**

4.3.5. AT+QCFG="urc/ri/other"   Ring Line Behavior of Other URCs

AT+QCFG="urc/ri/other" specifies the behavior of ring line when other URCs are presented.

AT+QCFG="urc/ri/other" Ring Line Behavior of Other URCs	
Write Command **AT+QCFG="urc/ri/other"[,<typeri>[,<pulse_duration>]]**	Response If configuration parameters are omitted (**+QCFG="urc/ri/other"**), return current configuration: **+QCFG: "urc/ri/other",<typeri>,<pulse_duration>,<pulse_count>**

	OK If configuration parameters are entered: **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: \<err\>**
Maximum Response Time	300ms

Parameter

\<typeri\>	The behavior of the ring line when URCs are presented "off"　　　No change. Ring line keeps inactive "<u>pulse</u>"　　Pulse. Pulse width determined by **\<pulse_duration\>**
\<pulse_duration\>	Set the width of pulse. Value ranges from 1 to 2000ms and the default is 120ms. This parameter is effect only when **\<typeri\>** is "pulse".
\<pulse_count\>	The count of pulse. This parameter is only meaningful when **\<typeri\>** is "pulse". Value ranges from 1 to 5 and default is 1. The interval time between two pulses is equal to **\<pulse_duration\>**.

4.3.6. AT+QCFG="urc/delay"　Delay URC Indication

AT+QCFG="urc/delay" can delay the output of URC indication until ring line pulse ends.

AT+QCFG="urc/delay"　Delay URC Indication	
Write Command **AT+QCFG="urc/delay"[,\<enable\>]**	Response If configuration parameter is omitted: **+QCFG: "urc/delay",\<enable\>** **OK** If configuration parameter is entered: **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: \<err\>**
Reference	

Parameter

\<enable>	0	URC indication will be output when ring line pulse starts
	1	URC indication will be output when ring line pulse ends (only the type of ring line is "pulse", refer to **AT+QCFG="urc/ri/ring"**, **AT+QCFG="urc/ri/smsincoming"** and **AT+QCFG="urc/ri/other"**)

4.3.7. AT+QCFG="tone/incoming" Enable/Disable Ring Tone

AT+QCFG="tone/incoming" is used to enable or disable ring tone.

AT+QCFG="tone/incoming" Enable/Disable Ring Tone	
Write Command **AT+QCFG="tone/incoming"[,\<value>]**	Response If configuration parameters are omitted: **+QCFG: "tone/incoming",\<value>** **OK** If configuration parameters are entered: **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: \<err>**
Reference	

Parameter

\<value>		A numeric parameter which indicates ring tone is open or not. The default value is 0.
	0	Disable ring tone
	1	Enable ring tone

NOTE

Auto save the configuration to NV. The setting is still valid after module restarts.

4.3.8. AT+QCFG="nwscanmode" Network Search Mode Configuration

AT+QCFG="nwscanmode" specifies the mode of searching network. If \<effect> is omitted, the configuration will take effect immediately.

AT+QCFG="nwscanmode" Network Search Mode Configuration	
Write Command **AT+QCFG="nwscanmode"[,<scan_mode>[,<effect>]]**	Response If configuration parameters are omitted (**+QCFG="nwscanmode"**), return current configuration: **+QCFG: "nwscanmode",<scan_mode>** **OK** If configuration parameters are entered: **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Reference	

Parameter

<scan_mode>	Number format, network search mode
	<u>0</u> AUTO
	1 GSM Only
	2 UMTS Only
<effect>	Number format, when to take effect
	0 Take effect after UE reboots
	<u>1</u> Take effect immediately

4.3.9. AT+QCFG="vbatt"   Voltage Detection

AT+QCFG="vbatt" can enable voltage detection and set corresponding parameters.

About Voltage Detection:

When the voltage is lower than the lowest voltage limit, the module will output:

   +QIND: "vbatt",-2

If it does not come back to a degree greater than the lowest voltage limit within 2 seconds, the module will be turned off automatically.

When the voltage is greater than the lowest voltage limit, but lower than low voltage warning limit, the module will output:

   +QIND: "vbatt",-1

When the voltage is greater than the highest voltage limit, the module will output:

+QIND: "vbatt",2

If it does not come back to a degree lower than highest voltage limit within 2 seconds, the module will be turned off automatically.

When the voltage is lower than the highest voltage limit, but greater than high voltage warning limit, the module will output:

+QIND: "vbatt",1

When the voltage comes back to normal voltage range, the module will output:

+QIND: "vbatt",0

Voltage detection is disabled by default. It is suggested to enable voltage detection in order to avoid module breakdown due to excessively high or low voltage.

The configuration will be stored to NV automatically.

AT+QCFG="vbatt" Voltage Detection	
Write Command **AT+QCFG="vbatt"[,\<vbatttype\>[,\<vbattvalue\>,\<vbattonoff\>]]**	Response If configuration parameters are omitted (**+QCFG="vbatt"**), return current configuration: **+QCFG: "vbatt",** **(\<vbatttype\>,\<vbattvalue\>,\<vbattonoff\>),** **(\<vbatttype\>,\<vbattvalue\>,\<vbattonoff\>),** **OK** If configuration parameters are entered: **+QCFG: "vbatt",** **(\<vbatttype\>,\<vbattvalue\>,\<vbattonoff\>)** **OK** Else, response: **ERROR** If error is related to ME functionality: **+CME ERROR: \<err\>**
Maximum Response Time	300ms

Parameter

<vbatttype>	Voltage type
	-2 Indicate the lowest voltage
	-1 Indicate the low voltage warning
	1 Indicate the high voltage warning
	2 Indicate the highest voltage
<vbattvalue>	Voltage threshold value (mv)
	(3250~<u>3290</u>~3420) The lowest voltage limit(If below this limit, module will shut down)
	(3480~<u>3500</u>~3520) Low voltage warning limit
	(4190~<u>4210</u>~4230) High voltage warning limit
	(4280~<u>4310</u>~4400) The highest voltage limit (If above this limit, module will shut down)
<vbattonoff>	Enable/disable voltage detection function
	<u>0</u> Disable
	1 Enable

Example

//Enable low voltage warning report, the limit is 3500mv.
AT+QCFG="VBATT",-1,3500,1
OK

+QIND: "vbatt", -1   //Report result when voltage is lower than low voltage warning limit.

+QIND: "vbatt", 0   //Report result when voltage is back to normal voltage.

AT+QCFG="VBATT",-1   //Query low warning limit.
+QCFG: "VBATT",(-1,3500,1)

OK

//Disable low voltage warning report, the limit is 3500mv.
AT+QCFG="VBATT",-1,3500,0
OK

4.3.10. AT+QCFG="temp"　Temperature Detection

AT+QCFG="temp" can enable temperature detection and set corresponding parameters.

About Temperature Detection:

When the temperature is lower than the lowest temperature limit, the module will output:

     +QIND: "temp",-2

If the temperature did not rise to a degree greater than the lowest temperature within 5 seconds, the module will be turned off automatically. When the temperature is greater than the lowest temperature limit, but lower than the low temperature warning limit, the module will output:

+QIND: "temp",-1

When temperature is greater than the highest temperature limit, the module will output:

+QIND: "temp",2

If the temperature did not drop to a degree lower than the highest temperature limit within 5 seconds, the module will be turned off automatically.

When the temperature is lower than the highest temperature limit, but greater than the high temperature warning limit, the module will output:

+QIND: "temp",1

When the temperature comes back from the low temperature warning limit or the high temperature warning limit to normal temperature range, the module will output:

+QIND: "temp",0

The configuration will be stored to NV automatically.

AT+ QCFG="temp" Temperature Detection	
Write Command **AT+QCFG="temp"[,<temptype>[,<tempvalue>[,<temponoff>]]**	Response If configuration parameters are omitted (**+QCFG="temp"**), return current configuration: **+QCFG: "temp",** **(<temptype>,<tempvalue>,<temponoff>),** **(<temptype>,<tempvalue>,<temponoff>),** **…** **OK** If configuration parameters are entered: **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms

Parameter

\<temptype\>	Temperature type	
	-2	Indicate the lowest temperature
	-1	Indicate low temperature warning
	1	Indicate high temperature warning
	2	Indicate the highest temperature
\<tempvalue\>	Temperature threshold value (degrees Celsius)	
	(-35~-40)	The lowest temperature limit (If below this limit, the module will be shut down). Default value is -38
	(-30~-35)	Low temperature warning limit. Default value is -32
	(70~80)	High temperature warning limit. Default value is 75
	(80~90)	The highest temperature limit (If above this limit, the module will be shut down). Default value is 85
\<temponoff\>	Enable/disable temperature detection function	
	<u>0</u>	Disable
	1	Enable

Example

AT+QCFG="temp",-1   //Query the low temperature warning limit and setting
+QCFG: "temp",(-1,-35,0)

OK
AT+QCFG="temp",-1,-35,1   //Set the low temperature warning limit
OK

\<Enable temperature detection, when greater than the lowest temperature limit, lower than low temperature warning limit\>

+QIND: "temp",-1   //Report result when temperature is lower than warning temperature

\<Enable temperature detection, when temperature is back to normal temperature range\>

+QIND: "temp",0   //Report result when temperature is back to normal temperature

4.3.11. AT+QCFG="fota/cid"   DFOTA Context ID Configuration

When you upgrade firmware by DFOTA on a FTP server or HTTP server, you need to activate a PDP context ID for FTP connection or HTTP connection. The default PDP context ID is 1, and it can be configured by AT+QCFG="fota/cid",\<contexitd\>.

AT+QCFG="fota/cid" DFOTA Context ID Configuration	
Write Command	Response
AT+QCFG="fota/cid"[,\<contextID\>]	If configuration parameters are omitted

	(**AT+QCFG="fota/cid**), return current configuration: **+QCFG: "fota/cid",<contextID>** **OK** If configuration parameters are entered: **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Reference	

Parameter

<contextID>	Integer type, context ID, range is 1-20, the default value is 1.

4.3.12. AT+QCFG="ussd/textescape" Character Escape of USSD Text

When AT+CSCS="GSM" or AT+CSCS="IRA", and USSD outputting text contains character <CR>, <LF>, quotation mark or others, user may make a parse error with USSD URC. AT+QCFG="ussd/textescape" can enable character escape function of USSD text to avoid this error. The configuration is saved into NV automatically.

AT+QCFG="ussd/textescape" Character Escape of USSD Text	
Write Command **AT+QCFG="ussd/textescape"[,<enable>]**	Response If configuration parameters are omitted (**+QCFG="ussd/textescape"**), return current configuration: **+QCFG: "ussd/textescape",<enable>** **OK** If configuration parameters are entered: **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Reference	

Parameter

<enable>	0	Character escape function of USSD text is disabled
	1	Character escape function of USSD text is enabled
		When AT+CSCS="GSM" or AT+CSCS="IRA", in USSD text outputting:
		0x5C (show in hex, character Ö in GSM, character \ in ASCII) will be escaped into 0x5C3543 ("\5C").
		0x0D (show in hex, character <CR> in GSM and IRA) will be escaped into 0x5C3044 ("\0D").
		0x0A (show in hex, character <LF> in GSM and IRA) will be escaped into 0x5C3041 ("\0A").
		0x22 (show in hex, character " in GSM and IRA) will be escaped into 0x5C3232 ("\22").
		0x00 (show in hex, character @ in GSM) will be escaped into 0x5C3030 ("\00").

4.3.13. AT+QCFG="sms/textescape" Character Escape of SMS Text

This command is similar to AT+QCFG="ussd/textescape". The only difference is this command affects SMS text.

AT+QCFG="sms/textescape" Character Escape of SMS Text	
Write Command **AT+QCFG="sms/textescape"[,<enable>]**	Response If configuration parameters are omitted (**+QCFG="sms/textescape"**), return current configuration: **+QCFG: "sms/textescape",<enable>** **OK** If configuration parameters are entered: **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Reference	

Parameter

<enable>	0	Character escape function of SMS text is disabled
	1	Character escape function of SMS text is enabled
		When AT+CSCS="GSM" or AT+CSCS="IRA", in SMS text outputting:

0x5C (show in hex, character Ö in GSM, character \ in ASCII) will be escaped into 0x5C3543 ("\5C").

0x0D (show in hex, character <CR> in GSM and IRA) will be escaped into 0x5C3044 ("\0D").

0x0A (show in hex, character <LF> in GSM and IRA) will be escaped into 0x5C3041 ("\0A").

0x22 (show in hex, character " in GSM and IRA) will be escaped into 0x5C3232 ("\22").

0x00 (show in hex, character @ in GSM) will be escaped into 0x5C3030 ("\00").

4.3.14. AT+QCFG="remoteip"   Enable/Disable Remote IP Function

AT+QCFG="remoteip" is used to set the function whether or not "remoteip" negotiation will be injected during the PPP dialing period. This parameter will not be saved and it will be effective immediately after setting.

AT+QCFG="remoteip" Enable/Disable Remote IP Function	
Write Command **AT+QCFG="remoteip"[,<remoteIPsel>]**	Response If <remoteipsel> is absence which means read. **+QCFG: "remoteip",<remoteIPsel>** **OK** If none is absence which means setting parameters. **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms

Parameter

<remoteIPsel>	Disable/enable the function of "remoteip" negotiation
	<u>0</u> Default value, no "remoteip" negotiation
	1 Active "remoteip" negotiation

NOTE

This default value is "0" for no "remoteip" negotiation function. New settings are saved in NV. This function becomes effective immediately.

Example

AT+QCFG="remoteip"	//Check current status
+QCFG: "remoteip",0	
OK	
AT+QCFG="remoteip",1	//Setting the "remoteip" negotiation active
OK	
AT+QCFG="remoteip"	//Check current status
+QCFG: "remoteip",1	
OK	
AT+QCFG="remoteip",0	//Setting the "remoteip" negotiation inactive
OK	
AT+QCFG="remoteip"	//Check current status
+QCFG: "remoteip",0	
OK	

4.4. AT+QINISTAT   Query Initialization State

AT+QINISTAT Query Initialization State	
Test Command **AT+QINISTAT=?**	Response **OK**
Execution Command **AT+QINISTAT**	Response **+QINISTAT: <state>** **OK**
Reference	

Parameter

<state>	0	No initialization
	1	Ready to execute AT command
	2	SMS has finished initialization
	3	Phonebook has finished initialization

NOTE

When **<state>** is 3, it also means initialization of SIM card related functions has been finished.

5 SIM Related Commands

5.1. AT+CIMI   Request International Mobile Subscriber Identity (IMSI)

AT+CIMI requests the International Mobile Subscriber Identity (IMSI) which is intended to permit the TE to identify the individual SIM card or active application in the UICC (GSM or USIM) which is attached to MT.

AT+CIMI Request International Mobile Subscriber Identity (IMSI)	
Test Command **AT+CIMI=?**	Response **OK**
Execution Command **AT+CIMI**	Response TA returns **<IMSI>** for identifying the individual SIM which is attached to ME. **<IMSI>** **OK** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<IMSI>   International Mobile Subscriber Identity (string without double quotes)

Example

AT+CIMI
460023210226023   //Query IMSI number of SIM which is attached to ME

OK

		to 3GPP TS 22.088 clause 2)
	"AB"	All Barring services (refer to 3GPP TS 22.030) (applicable only for **<mode>**=0)
	"AG"	All outgoing barring services (refer to 3GPP TS 22.030) (applicable only for **<mode>**=0)
	"AC"	All incoming barring services (refer to 3GPP TS 22.030) (applicable only for **<mode>**=0)
	"FD"	SIM card or active application in the UICC (GSM or USIM) fixed dialing memory feature (if PIN2 authentication has not been done during the current session, PIN2 is required as **<passwd>**)
	"PS"	PH SIM (lock Phone to SIM/UICC card)(MT asks password when other current SIM/UICC card is inserted;
		MT may remember certain amount of previously used cards thus not requiring password when they are inserted)
	"PN"	Network Personalization (refer to 3GPP TS 22.022)
	"PU"	Network Subset Personalization (refer to 3GPP TS 22.022)
	"PP"	Service Provider Personalization (refer to 3GPP TS 22.022)
	"PC"	Corporate Personalization (refer to 3GPP TS 22.022)
<mode>	0	Unlock
	1	Lock
	2	Query status
<passwd>	Password	
<class>	1	Voice
	2	Data
	4	FAX
	7	All telephony except SMS (Default)
	8	Short message service
	16	Data circuit sync
	32	Data circuit async
	64	Dedicated packet access
	128	Dedicated PAD access
<status>	0	Off
	1	On

Example

AT+CLCK="SC", 2	
+CLCK: 0	//Query the status of SIM card lock, 0-unlock
OK	
AT+CLCK="SC",1,"1234"	//Lock SIM card, the password is 1234
OK	
AT+CLCK="SC",2	
+CLCK: 1	//Query the status of SIM card lock, 1-lock

```
OK
AT+CLCK="SC",0,"1234"                    //Unlock SIM card
OK
```

5.3. AT+CPIN   Enter PIN

AT+CPIN is used to enter a password or query whether or not module requires a password which is necessary before it can be operated (SIM PIN, SIM PUK, PH-SIM PIN, etc.).

AT+CPIN Enter PIN	
Test Command **AT+CPIN=?**	Response **OK**
Read Command **AT+CPIN?**	Response TA returns an alphanumeric string indicating whether or not some password is required. **+CPIN: <code>** **OK**
Write Command **AT+CPIN=<pin>[,<new pin>]**	Response TA stores a password which is necessary before it can be operated (SIM PIN, SIM PUK, etc.). If the PIN is to be entered twice, the TA shall automatically repeat the PIN. If no PIN request is pending, no action is taken and an error message, **+CME ERROR**, is returned to TE. If the PIN required is SIM PUK or SIM PUK2, the second pin is required. This second pin, **<new pin>**, is used to replace the old pin in the SIM. **OK**
Maximum Response Time	5s
Reference 3GPP TS 27.007	

Parameter

<code>	READY	MT is not pending for any password
	SIM PIN	MT is waiting for SIM PIN to be given
	SIM PUK	MT is waiting for SIM PUK to be given
	SIM PIN2	MT is waiting for SIM PIN2 to be given
	SIM PUK2	MT is waiting for SIM PUK2 to be given

	PH-NET PIN	MT is waiting for network personalization password to be given
	PH-NET PUK	MT is waiting for network personalization unblocking password to be given
	PH-NETSUB PIN	MT is waiting for network subset personalization password to be given
	PH-NETSUB PUK	MT is waiting for network subset personalization unblocking password to be given
	PH-SP PIN	MT is waiting for service provider personalization password to be given
	PH-SP PUK	MT is waiting for service provider personalization unblocking password to be given
	PH-CORP PIN	MT is waiting for corporate personalization password to be given
	PH-CORP PUK	MT is waiting for corporate personalization unblocking password to be given
<pin>	Password (string type). If the requested password was a PUK, such as SIM PUK1 or PH-FSIM PUK or another password, then **<pin>** must be followed by **<new pin>**	
<new pin>	New password (string type) if the requested code was a PUK.	

Example

```
//Enter PIN

AT+CPIN?
+CPIN: SIM PIN                       //Query PIN code is locked

OK
AT+CPIN=1234                         //Enter PIN
OK

+CPIN: READY

AT+CPIN?                             //PIN has already been entered
+CPIN: READY

OK

//Enter PUK and PIN

AT+CPIN?
+CPIN: SIM PUK                       //Query PUK code is locked

OK
AT+CPIN="26601934","1234"            //Enter PUK and new PIN password
OK
```

+CPIN: READY

AT+CPIN?
+CPIN: READY   //PUK has already been entered

OK

5.4. AT+CPWD   Change Password

AT+CPWD sets a new password for the facility lock function defined by command Facility Lock **+CLCK**.

AT+CPWD Change Password	
Test Command **AT+CPWD=?**	Response TA returns a list of pairs which present the available facilities and the maximum length of their password. **+CPWD:** (list of supported **<fac>**s),(**<pwdlength>**s) **OK**
Write Command **AT+CPWD=<fac>,<oldpwd>,<newpwd>**	Response TA sets a new password for the facility lock function. **OK**
Maximum Response Time	5s
Reference 3GPP TS 27.007	

Parameter

<fac>	"SC"	SIM (lock SIM/UICC card) (SIM/UICC asks password in MT power-up and when this lock command is issued)
	"AO"	BAOC (Barr All Outgoing Calls, refer to 3GPP TS 22.088 clause 1)
	"OI"	BOIC (Barr Outgoing International Calls, refer to 3GPP TS 22.088 clause 1)
	"OX"	BOIC-exHC (Barr Outgoing International Calls except to Home Country, refer to 3GPP TS 22.088 clause 1)
	"AI"	BAIC (Barr All Incoming Calls, refer to 3GPP TS 22.088 clause 2)
	"IR"	BIC-Roam (Barr Incoming Calls when Roaming outside the home country, refer to 3GPP TS 22.088 clause 2)
	"AB"	All barring services (refer to 3GPP TS 22.030, applicable only for **<mode>**=0)
	"AG"	All outgoing barring services (refer to 3GPP TS 22.030, applicable only for **<mode>**=0)

	"AC	All incoming barring services (refer to 3GPP TS 22.030, applicable only for **<mode>**=0)
	"PS"	PH SIM (lock Phone to SIM/UICC card)(MT asks password when other current SIM/UICC card inserted; MT may remember certain amount of previously used cards thus not requiring password when they are inserted)
	"P2"	SIM PIN2
	"PN"	Network Personalization (refer to 3GPP TS 22.022)
	"PU"	Network Subset Personalization (refer to 3GPP TS 22.022)
	"PP"	Service Provider Personalization (refer to 3GPP TS 22.022)
	"PC"	Corporate Personalization (refer to 3GPP TS 22.022)
<pwdlength>	Integer type, max length of password	
<oldpwd>	Password specified for the facility from the user interface or with command	
<newpwd>	New password	

Example

AT+CPIN?
+CPIN: READY

OK
AT+CPWD="SC","1234","4321"   //Change SIM card password to "4321"
OK

//Restart module or re-activate the SIM card

AT+CPIN   //Query PIN code is locked
+CPIN: SIM PIN

OK
AT+CPIN=4321   //PIN must be entered to define a new password "4321"
OK

+CPIN: READY

5.5. AT+CSIM   Generic SIM Access

AT+CSIM allows a direct control of the SIM that is installed in the currently selected card slot by a distant application on the TE. The TE shall then keep the processing of SIM information within the frame specified by GSM/UMTS.

AT+CSIM Generic SIM Access	
Test Command **AT+CSIM=?**	Response **OK**
Write Command **AT+CSIM= <length>,<command>**	Response **+CSIM: <length>,<response>** **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<length>	Integer type. Length of **<command>** or **<response>** string
<command>	Command transferred by the MT to the SIM in the format as described in 3GPP TS 51.011
<response>	Response to the command transferred by the SIM to the MT in the format as described in 3GPP TS 51.011

5.6. AT+CRSM   Restricted SIM Access

AT+CRSM offers easy and limited access to the SIM database. It transmits the SIM **<command>** and required parameters to the MT.

AT+CRSM Restricted SIM Access	
Test Command **AT+CRSM=?**	Response **OK**
Write Command **AT+CRSM=<command>[,<fileId>[,<P1>,<P2>,<P3>[,<data>][,<pathId>]]]**	Response **+CRSM: <sw1>,<sw2>[,<response>]** **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**

Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

\<command\>	USIM command number
	176 READ BINARY
	178 READ RECORD
	192 GET RESPONSE
	214 UPDATE BINARY
	220 UPDATE RECORD
	242 STATUS
\<fileId\>	Integer type; identifier for an elementary data file on USIM, if used by **\<command\>**
\<P1\>, \<P2\>, \<P3\>	Integer type; parameters transferred by the MT to the SIM. These parameters are mandatory for every command, except GET RESPONSE and STATUS. The values are described in 3GPP TS 51.011
\<data\>	Information which shall be written to the SIM (hexadecimal character fomat; refer to **+CSCS)**
\<pathId\>	Contains the directory path of an elementary file on a UICC in hexadecimal format
\<sw1\>, \<sw2\>	Integer type; information from the SIM about the execution of the actual command. These parameters are delivered to the TE in both cases, on successful or failed execution of the command
\<response\>	Response of a successful completion of the command previously issued (hexadecimal character format; refer to **+CSCS)**. STATUS and GET RESPONSE return data, which gives information about the current elementary data field. This information includes the type of file and its size (refer to 3GPP TS 51.011). After READ BINARY, READ RECORD or RETRIEVE DATA command the requested data will be returned. **\<response\>** is not returned after a successful UPDATE BINARY, UPDATE RECORD or SET DATA command

5.7. AT+QCCID   Show ICCID

AT+QCCID returns the ICCID (Integrated Circuit Card Identifier) number of the SIM card.

AT+QCCID Show ICCID	
Test Command	Response

AT+QCCID=?	OK
Execution Command **AT+QCCID**	Response **+QCCID: <iccid>** **OK** **ERROR**
Maximum Response Time	300ms

Example

AT+QCCID **+QCCID: 898600220909A0206023** **OK**	//Query ICCID of the SIM card

5.8. AT+QSIMDET   SIM Card Detection

AT+QSIMDET enables SIM/USIM card hotswap function. SIM/USIM card is detected by GPIO interrupt. You should also set the level of SIM/USIM detecting pin when the SIM card is inserted. This command can be saved by AT&W.

AT+QSIMDET SIM Card Detection	
Test Command **AT+QSIMDET=?**	Response **+QSIMDET: (0,1),(0,1)** **OK**
Read Command **AT+QSIMDET?**	Response **+QSIMDET: <enable>,<insert_level>** **OK**
Write Command **AT+QSIMDET=<enable>,<insert_level>**	Response **OK** **ERROR**
Maximum Response Time	300ms

Parameter

<enable>	Switch on or off detecting SIM/USIM card
	<u>0</u> Off

<insert_level>	1	On
		The level of SIM detection pin when a SIM card is inserted
	0	Low level
	1	High level

NOTE

Hotswap function is invalid if the configured value of **<insert_level>** is inconsistent with hardware design.

Example

AT+QSIMDET=1,0	//If SIM/USIM detection pin level is low when SIM/USIM card inserted
OK	
<Remove SIM/USIM card>	
+CPIN: NOT READY	
<Insert SIM/USIM card>	
+CPIN: READY	//If PIN1 of the SIM/USIM card is unlocked

5.9. AT+QSIMSTAT   SIM Inserted Status Report

AT+QSIMSTAT can query SIM/USIM inserted status or enable SIM/USIM inserted status report. The configuration of this command can be saved by AT&W.

AT+QSIMSTAT SIM Inserted Status Report	
Test Command **AT+QSIMSTAT=?**	Response **+QSIMSTAT: (0,1)** **OK**
Read Command **AT+QSIMSTAT?**	Response **+QSIMSTAT: <enable>,<inserted_status>** **OK**
Write Command **AT+QSIMSTAT=<enable>**	Response **OK** **ERROR**
Maximum Response Time	300ms

Parameter

<enable>	Enable or disable SIM/USIM inserted status report. If it is enabled, when SIM/USIM card removes or inserts, the URC: **+QSIMSTAT: <enable>,<inserted_status>** will be reported.
	0 Disable
	1 Enable
<inserted_status>	SIM/USIM is inserted or removed. This argument is not allowed to be set.
	0 Removed
	1 Inserted
	2 Unknown, before SIM initialization

Example

```
AT+QSIMSTAT?                    //Query SIM/USIM inserted status
+QSIMSTAT: 0,1

OK
AT+QSIMDET=1,0
OK
AT+QSIMSTAT=1                   //Enable SIM/USIM inserted status report
OK
AT+QSIMSTAT?
+QSIMSTAT: 1,1

OK

<Remove SIM/USIM card>

+QSIMSTAT : 1,0                 //Report of SIM/USIM inserted status, removed

+CPIN: NOT READY
AT+QSIMSTAT?
+QSIMSTAT: 1,0

OK

<Insert SIM/USIM card>

+QSIMSTAT : 1,1                 //Report of SIM/USIM inserted status, inserted

+CPIN: READY
```

6 Network Service Commands

6.1. AT+COPS   Operator Selection

AT+COPS returns the current operators and their status and allows to set automatic or manual network selection.

AT+COPS Operator Selection	
Test Command **AT+COPS=?**	Response TA returns a set of five parameters, each representing an operator present in the network. Any of the formats may be unavailable and should then be an empty field. The list of operators shall be in order: home network, networks referenced in SIM and other networks. **+COPS:** (list of supported **<stat>**, long alphanumeric **<oper>**, short alphanumeric **<oper>**, numeric **<oper>**s)[,**< Act>**])s][,**< Plmn_flag>**])s] [,,(list of supported **<mode>**s),(list of supported **<format>**s)] **OK** If error is related to ME functionality: **+CME ERROR: <err>**
Read Command **AT+COPS?**	Response TA returns the current mode and the currently selected operator. If no operator is selected, **<format>**, **<oper>** and **<Act>** are omitted. **+COPS: <mode>[,<format>[,<oper>][,<Act>]]** **OK** If error is related to ME functionality: **+CME ERROR: <err>**
Write Command **AT+COPS=<mode>**	Response TA forces an attempt to select and register the GSM/UMTS

[,<format>[,<oper>]]	network operator. If the selected operator is not available, no other operator shall be selected (except **<mode>**=4). The format of selected operator name shall apply to further read commands (**+COPS?**). **OK** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	180s, determined by network.
Reference 3GPP TS 27.007	

Parameter

<stat>	0	Unknown
	1	Operator available
	2	Operator current
	3	Operator forbidden
<oper>	Operator in format as per **<mode>**	
<mode>	0	Automatic mode; **<oper>** field is ignored
	1	Manual operator selection; **<oper>** field shall be present and **<Act>** optionally
	2	Manual deregister from network
	3	Set only **<format>** (for read command **+COPS?**), do not attempt registration/deregistration (**<oper>** and **<Act>** fields are ignored); this value is not applicable in read command response
	4	Manual/automatic selected, **<oper>** field shall be presented; if manual selection fails, automatic mode (**<mode>**=0) is entered
<format>	0	Long format alphanumeric **<oper>**; can be up to 16 characters long
	1	Short format alphanumeric **<oper>**
	2	Numeric **<oper>**; GSM location area identification number
<Act>	Access technology selected	
	0	GSM
	2	UTRAN
	3	GSM W/EGPRS
	4	UTRAN W/HSDPA
	5	UTRAN W/HSUPA
	6	UTRAN W/HSDPA and HSUPA
<Plmn_flag>	0	Available PLMN is present on EHPLMN List
	1	Available PLMN is present on User controlled List
	2	Available PLMN is present on Operator controlled List

Example

AT+COPS=?	//List all current network operators
+COPS:	
(2,"CHN-UNICOM","UNICOM","46001",2),(1,"CHN-UNICOM","UNICOM","46001",0,0),(3,"CHINA	
MOBILE","CMCC","46000",0),,(0-4),(0-2)	
OK	
AT+COPS?	//Query the currently selected network operator
+COPS: 0,0,"CHN-UNICOM",2	
OK	

6.2. AT+CREG   Network Registration

AT+CREG returns the network registration status. The write command sets whether or not to present URC.

AT+CREG Network Registration	
Test Command **AT+CREG=?**	Response **+CREG:** (list of supported **<n>**s) **OK**
Read Command **AT+CREG?**	Response TA returns the status of result code presentation and an integer **<stat>** which shows whether the network has currently indicated the registration of the ME. Location information elements **<lac>** and **<ci>** are returned only when **<n>**=2 and ME is registered in the network. **+CREG: <n>,<stat>[,<lac>,<ci>[,<Act>]]** **OK** If error is related to ME functionality: **+CME ERROR: <err>**
Write Command **AT+CREG=<n>**	Response TA controls the presentation of an unsolicited result code **+CREG: <stat>** when **<n>**=1 and there is a change in the ME network registration status. **OK**
Maximum Response Time	300ms

Reference	
3GPP TS 27.007	

Parameter

\<n\>	0	Disable network registration unsolicited result code
	1	Enable network registration unsolicited result code **+CREG: \<stat\>**
	2	Enable network registration unsolicited result code with location information **+CREG: \<stat\>[,\<lac\>,\<ci\>[,\<Act\>]]**
\<stat\>	0	Not registered, ME is not currently searching a new operator to register to
	1	Registered, home network
	2	Not registered, but ME is currently searching a new operator to register to
	3	Registration denied
	4	Unknown
	5	Registered, roaming
\<lac\>		String type, two bytes location area code in hexadecimal format
\<ci\>		String type, 16 bit (GSM) or 28 bit (UMTS) cell ID in hexadecimal format
\<Act\>		Access technology selected
	0	GSM
	2	UTRAN

Example

```
AT+CREG=1
OK

+CREG: 1                          //URC reports that ME has registered
AT+CREG=2                         //Activates extended URC mode
OK

+CREG: 1,"D504","08043799",2      //URC reports that operator has found location area code and
                                    cell ID
```

6.3. AT+CSQ   Signal Quality Report

AT+CSQ indicates the received signal strength **\<rssi\>** and the channel bit error rate **\<ber\>**.

AT+CSQ Signal Quality Report	
Test Command **AT+CSQ=?**	Response **+CSQ:** (list of supported **\<rssi\>**s),(list of supported **\<ber\>**s)

	OK
Execution Command **AT+CSQ**	Response **+CSQ: <rssi>,<ber>** **OK** **+CME ERROR: <err>** Execution Command returns received signal strength indication **<rssi>** and channel bit error rate **<ber>** from the ME. Test Command returns values supported by the TA.
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<rssi>	0	-113dBm or less
	1	-111dBm
	2...30	-109... -53dBm
	31	-51dBm or greater
	99	Not known or not detectable

According to 3GPP TS 27.007 [47], the **<rssi>** value is not applicable to 3G networks. Yet, with a view to employing **+CSQ** for all networks has been designed to show a **<rssi>** value derived from the 3G specific RSCP parameter is shown by AT+QENG. Nevertheless, please note that connection quality in 3G networks is depending on further factors. For example, despite good **<rssi>** or RSCP values for signal quality, data throughput may vary depending on the number of subscribers sharing the same cell.

<ber>	Channel bit error rate (in percent)	
	0...7	As RXQUAL values in the table in 3GPP TS 45.008 subclause 8.2.4
	99	Not known or not detectable

Example

AT+CSQ=?
+CSQ: (0-31,99),(0-7,99)

OK
AT+CSQ
+CSQ: 28,0   //Query the current signal strength indication is 28 and channel bit error rate is 0

OK

NOTES

After using network related commands such as **+CCWA, +CCFC**, users are advised to wait for 3s before entering AT+CSQ. This is recommended to ensure that any network access required for the preceding command has finished.

6.4. AT+CPOL   Preferred Operator List

AT+CPOL edits and queries the list of the preferred operators.

AT+CPOL Preferred Operator List	
Test Command **AT+CPOL=?**	Response **+CPOL:** (list of supported **<index>**s)**,**(list of supported **<format>**s) **OK**
Read Command **AT+CPOL?**	Response Query the list of the preferred operators: **+CPOL: <index>,<format>,<oper>** **[,<GSM>,<GSM_compact,<UTRAN>]** **[+CPOL: <index>,<format>,<oper>** **[,<GSM>,<GSM_compact,<UTRAN>]** **[…]]** **OK**
Write Command **AT+CPOL=<index>[,<format>[,<oper>** **[<GSM>,<GSM_compact>,<UTRAN>]]** **]**	Response Edit the list of the preferred operators. **OK** **ERROR** If the **<index>** is given but the **<operator>** is left out, the entry is deleted.
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<index>	Integer type; the order number of operator in the SIM/USIM preferred operator list	
<format>	0	Long format alphanumeric **<oper>**

	1	Short format alphanumeric **<oper>**
	2	Numeric **<oper>**
<oper>		String type; **<format>** indicates if the format is alphanumeric or numeric (see **+COPS**)
<GSM>		GSM access technology
	0	Access technology is not selected
	1	Access technology is selected
<GSM_Compact>		GSM compact access technology
	0	Access technology is not selected
	1	Access technology is selected
<UTRAN>		UTRAN access technology
	0	Access technology is not selected
	1	Access technology is selected

6.5. AT+COPN   Read Operator Names

The AT+COPN command returns the list of operator names from the ME. Each operator code **<numericn>** that has an alphanumeric equivalent **<alphan>** in the ME memory is returned.

AT+COPN Read Operator Names	
Test Command **AT+COPN=?**	Response **OK**
Execution Command **AT+COPN**	Response **+COPN: <numeric1>,<alpha1>** **[+COPN: <numeric2>,<alpha2>** **[…]]** **OK** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	Depends on the number of operator names
Reference 3GPP TS 27.007	

Parameter

<numericn>	String type; operator in numeric format (see **+COPS**)
<alphan>	String type; operator in long alphanumeric format (see **+COPS**)

6.6. AT+CTZU   Automatic Time Zone Update

Set command enables and disables automatic time zone update via NITZ. The configuration is stored to NV automatically.

AT+CTZU Automatic Time Zone Update	
Test Command **AT+CTZU=?**	Response **+CTZU: (0,1)** **OK**
Write Command **AT+CTZU=<onoff>**	Response **OK** **ERROR**
Read Command **AT+CTZU?**	Response **+CTZU: <onoff>** **OK**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<onoff>	Integer type, indicates the mode of automatic time zone update	
	0	Disable automatic time zone update via NITZ.
	1	Enable automatic time zone update via NITZ

Example

```
AT+CTZU?
+CTZU: 0

OK
AT+CTZU=?
+CTZU: (0,1)

OK
AT+CTZU=1
OK
AT+CTZU?
+CTZU: 1
```

OK

6.7. AT+CTZR   Time Zone Reporting

This command controls the time zone reporting of changed event. If reporting is enabled the MT returns the unsolicited result code **+CTZV: <tz>or +CTZE: <tz>,<dst>,<time>** whenever the time zone is changed. The configuration is stored to NV automatically.

AT+CTZR Time Zone Reporting	
Test Command **AT+CTZR=?**	Response **+CTZR: (0-2)** **OK**
Write Command **AT+CTZR=<reporting>**	Response **OK** **ERROR**
Read Command **AT+CTZR?**	Response **+CTZR: <reporting>** **OK**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<reporting>	Integer type, indicates the mode of time zone reporting 0 Disable time zone reporting of changed event 1 Enable time zone reporting of changed event by unsolicited result code **+CTZV: <tz>** 2 Enable extended time zone reporting by unsolicited result code **+CTZE: <tz>,<dst>,<time>**
<tz>	String type, represents the sum of the local time zone (difference between the local time and GMT is expressed in quarters of an hour) plus daylight saving time. The format is "±zz", expressed as a fixed width, two digit integer with the range -48 ... +56. To maintain a fixed width, numbers in the range -9 ... +9 are expressed with a leading zero, e.g. "-09", "+00" and "+09".
<dst>	Integer type, indicates whether **<tz>** includes daylight savings adjustment 0 **<tz>** includes no adjustment for Daylight Saving Time 1 **<tz>** includes +1 hour (equals 4 quarters in **<tz>**) adjustment for daylight saving time

	2	**<tz>** includes +2 hours (equals 8 quarters in **<tz>**) adjustment for daylight saving time
<time>		String type, represents the local time. The format is "YYYY/MM/DD,hh:mm:ss", expressed as integers representing year (YYYY), month (MM), date (DD), hour (hh), minute (mm) and second (ss). This parameter can be provided by the network when delivering time zone information and will be presented in the unsolicited result code of extended time zone reporting if provided by the network.

Example

```
AT+CTZR=2
OK
AT+CTZR?
+CTZR: 2

OK

+CTZE: "+32",0,"2013/08/23,06:51:13"          //<reporting> is 2
```

6.8. AT+QLTS   Obtain the Latest Network Time Synchronization

AT+QLTS is used to obtain the latest network time synchronization.

AT+QLTS Obtain the Latest Network Time Synchronization	
Test Command **AT+QLTS=?**	Response **OK**
Execution Command **AT+QLTS**	Response Execution Command returns latest time for Network synchronization: **+QLTS: <time>,<dst>** **OK**
Write Command **AT+QLTS=<mode>**	Response **+QLTS: <time>,<dst>** **OK** **ERROR** If error is related to ME functionality **+CME ERROR: <err>**
Maximum Response Time	300ms

Parameter

<mode>	Query network time mode
	0 Query latest time that network synchronized
	1 Query current GMT time calculated from the latest time that network synchronized
	2 Query current LOCAL time calculated from the latest time network synchronized
<time>	String type. Format is "YYYY/MM/DD,hh:mm:ss±zz", indicates year (two last digits), month, day, hour, minutes, seconds and time zone (indicates the difference, expressed in quarters of an hour, between the local time and GMT; range -48...+56). E.g. 6th of May 2004, 22:10:00 GMT+2 hours.
<dst>	Daylight saving time. It is zero equals to "04/05/06,22:10:00+08,0"

> **NOTES**
>
> If network has not synchronized the time, **AT+QLTS** command will only return OK

Example

```
AT+QLTS=?          //Query supported QLTS mode
+QLTS: (0-2)

OK
AT+QLTS            //Query latest time that network synchronized
+QLTS: "14/04/29,06:30:15+32,0"

OK
AT+QLTS=0          //Query latest time that network synchronized. It's same as "AT+QLTS"
+QLTS: "14/04/29,06:30:15+32,0"

OK
AT+QLTS=1          //Query current GMT time calculated from the latest time that network synchronized
+QLTS: "14/04/29,06:40:43+32,0"

OK
AT+QLTS=2          //Query current LOCAL time calculated from the latest time network synchronized
+QLTS: "14/04/29,14:41:33+32,0"

OK
```

7 Call Related Commands

7.1. ATA   Answer an Incoming Call

ATA connects the module to an incoming voice or data call indicated by a "RING" URC.

ATA Answer an Incoming Call	
Execution Command **ATA**	Response TA sends off-hook to the remote station. Response in case of data call, if successfully connected **CONNECT<text>** TA switches to data mode. Note: **<text>** output only if **ATX<value>** parameter setting with the **<value>** >0. When TA returns to command mode after call release: **OK** Response in case of voice call, if successfully connected: **OK** Response if no connection: **NO CARRIER**
Maximum Response Time	90s, determined by network.
Reference V.25ter	

NOTES

1. Any additional commands on the same command line are ignored.
2. This command may be aborted generally by receiving a character during execution. The aborting is not possible during some states of connection establishment such as handshaking.
3. See also **ATX**.

Example

RING	//A voice call is ringing
AT+CLCC	
+CLCC: 1,1,4,0,0,"02154450290",129	
OK	
ATA	//Accept the voice call with **ATA**
OK	

7.2. ATD   Mobile Originated Call to Dial a Number

ATD can be used to set up outgoing voice and data calls. Supplementary Services can also be controlled with ATD.

ATD Mobile Originated Call to Dial a Number	
Execution Command **ATD<n>[<mgsm>][;]**	Response This command can be used to set up outgoing voice, data or FAX calls. It also serves to control supplementary services. If no dial tone and (parameter setting **ATX2** or **ATX4**): **NO DIALTONE** If busy and (parameter setting **ATX3** or **ATX4**): **BUSY** If a connection cannot be established: **NO CARRIER** If connection is successful and non-voice call. **CONNECT<text>** TA switches to data mode. **<text>** outputs only if **ATX<value>** parameter setting with the **<value>** >0 When TA returns to command mode after call release: **OK** If connection is successful and voice call: **OK**
Maximum Response Time	5s, determined by network (AT+COLP=0).

Reference	
V.25ter	

Parameter

<n>	String of dialing digits and optionally V.25ter modifiers
	Dialing digits: **0-9, * , #, +, A, B, C**
	Following V.25ter modifiers are ignored: **,(comma), T, P, !, W, @**
<mgsm>	String of **GSM** modifiers:
	I Actives **CLIR** (Disable presentation of own number to called party)
	i Deactivates **CLIR** (Enable presentation of own number to called party)
	G Activates closed user group invocation for this call only
	g Deactivates closed user group invocation for this call only
<;>	Only required to set up voice call, return to command state

NOTES

1. This command may be aborted generally by receiving an **ATH** command or a character during execution. The aborting is not possible during some states of connection establishment such as handshaking.
2. Parameter "I" and "i" only if no *# code is within the dial string.
3. See **ATX** command for setting result code and call monitoring parameters.
4. <n> is default value for last number that can be dialed by **ATDL**.
5. Responses returned after dialing with **ATD**.
   For voice call two different responses mode can be determined. TA returns "OK" immediately either after dialing was completed or after the call was established. The setting is controlled by AT+COLP. Factory default is AT+COLP=0, which causes the TA returns "OK" immediately after dialing was completed, otherwise TA will return "OK", "BUSY", "NO DIAL TONE", "NO CARRIER".
6. Using **ATD** during an active voice call:
   ● When a user originates a second voice call while there is already an active voice call, the first call will be automatically put on hold.
   ● The current states of all calls can be easily checked at any time by using the AT+CLCC command.

Example

ATD10086;	//Dialing out the party's number
OK	

7.3. ATH   Disconnect Existing Connection

ATH disconnects circuit switched data calls or voice calls. AT+CHUP is also used to disconnect the voice call.

ATH Disconnect Existing Connection	
Execution Command **ATH[n]**	Response Disconnect existing call by local TE from command line and terminate call. **OK**
Maximum Response Time	90s, determined by network.
Reference V.25ter	

Parameter	
<n> 0 Disconnect from line and terminate call	

7.4. AT+CVHU   Voice Hang Up Control

AT+CVHU controls whether ATH can be used to disconnect the voice call.

AT+CVHU Voice Hang Up Control	
Test Command **AT+CVHU=?**	Response **+CVHU: (list of supported<mode>s)** **OK**
Read Command **AT+CVHU?**	Response **+CVHU: <mode>** **OK**
Write Command **AT+CVHU=<mode>**	Response **OK** **ERROR**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<mode>	0	ATH is disconnected
	1	ATH is ignored but "OK" response is returned

7.5. AT+CHUP   Hang Up Call

AT+CHUP cancels all voice calls in the state of Active, Waiting and Held. For data connections, use ATH.

AT+CHUP Hang Up Call	
Test Command **AT+CHUP=?**	Response **OK**
Execution Command **AT+CHUP**	Response **OK** **ERROR**
Maximum Response Time	90s, determined by network.
Reference 3GPP 27.007	

Example

RING	//Incoming call
AT+CHUP **OK**	//Hang up call

7.6. +++   Switch From Data Mode to Command Mode

The +++ character sequence causes the module to switch from data mode to AT command mode. It allows inputting AT commands while maintaining the data connection with the remote device.

+++ Switch From Data Mode to Command Mode	
Execution Command **+++**	Response This command is only available during TA is in data mode. The"**+++**" character sequence causes the TA to cancel the data flow over the AT interface and switch to command mode. This allows you to enter AT command while maintaining the data connection with the remote server or, accordingly, the packet domain connection.

	OK
Maximum Response Time	300ms
Reference V.25ter	

NOTES

1. To prevent the "+++" escape sequence from being misinterpreted as data, it should comply to following sequence:
   - Do not input any character within T1 time (1000ms) before inputting "+++".
   - Input "+++" within 1000ms, and no other characters can be inputted during this time.
   - Do not input any character within T1 time (1000ms) after "+++" has been inputted.
   - Switch to command mode, otherwise return to step 1.
2. To return from command mode back to data mode: Enter **ATO**
   - Another way to change to command mode is through DTR, refer to **AT&D** command for details.

7.7. ATO   Switch From Command Mode to Data Mode

ATO resumes the connection and switches back from command mode to data mode.

ATO Switch From Command Mode to Data Mode	
Execution Command **ATO[n]**	Response TA resumes the connection and switches back from command mode to data mode. If connection is not successfully resumed: **NO CARRIER** else TA returns to data mode from command mode **CONNECT** **<text>**
Maximum Response Time	300ms
Reference V.25ter	

Parameter

<n>	0	Switch from command mode to data mode

> **NOTE**
>
> TA returns to data mode from command mode **CONNECT <text>**,**<text>** only if **ATX** parameter is set as value>0.

7.8. ATS0   Set Number of Rings before Automatically Answering Call

ATS0 controls automatic answering mode for the incoming calls.

ATS0 Set Number of Rings Before Automatically Answering Call	
Read Command **ATS0?**	Response **<n>** **OK**
Write Command **ATS0=<n>**	Response This parameter setting determines the number of rings before auto-answer. **OK**
Maximum Response Time	300ms
Reference V.25ter	

Parameter

<n>	<u>0</u>	Automatic answering is disabled
	1-255	Enable automatic answering on the ring number specified

> **NOTE**
>
> If **<n>** is set too high, the calling party may hang up before the call is answered automatically.

Example

ATS0=3	//Set three rings before automatically answering a call
OK	
RING	//Call coming
RING	

RING	//Automatically answering the call after three rings

7.9. ATS6 Set Pause Before Blind Dialing

ATS6 is implemented for compatibility reasons only, and has no effect.

ATS6 Set Pause Before Blind Dialing	
Read Command **ATS6?**	Response **<n>** **OK**
Write Command **ATS6=<n>**	Response **OK**
Maximum Response Time	300ms
Reference V.25ter	

Parameter

<n>	0-<u>2</u>-10	Number of seconds to wait before blind dialing

7.10. ATS7 Set Number of Seconds to Wait for Connection Completion

ATS7 specifies the amount of time to wait for the connection completion in case of answering or originating a call. If no connection is established during this time, the module disconnects from the line.

ATS7 Set Number of Seconds to Wait for Connection Completion	
Read Command **ATS7?**	Response **<n>** **OK**
Write Command **ATS7=<n>**	Response This parameter setting determines the amount of time to wait for the connection completion in case of answering or originating a call. **OK**

Maximum Response Time	300ms
Reference V.25ter	

Parameter

<n>	0	Disabled
	1-255	Number of seconds to wait for connection completion

7.11. ATS8　Set the Number of Seconds to Wait for Comma Dial Modifier

ATS8 is implemented for compatibility reasons only, and has no effect.

ATS8　Set the Number of Seconds to Wait for Comma Dial Modifier	
Read Command **ATS8?**	Response **<n>** **OK**
Write Command **ATS8=<n>**	Response **OK**
Maximum Response Time	300ms
Reference V.25ter	

Parameter

<n>	0	No pause when comma encountered in dial string
	1-2-255	Number of seconds to wait

7.12. ATS10　Set Disconnect Delay after Indicating the Absence of Data Carrier

ATS10 determines the amount of time, which the UE remains connected in absence of a data carrier.

ATS10　Set Disconnect Delay after Indicating the Absence of Data Carrier	
Read Command **ATS10?**	Response **<n>** **OK**
Write Command **ATS10=<n>**	Response This parameter setting determines the amount of time that the TA will remain connected in absence of data carrier. If the data carrier is once more detected before disconnection, the TA remains connected. **OK**
Maximum Response Time	300ms
Reference V.25ter	

Parameter

<n>	1-15-254	Number of tenths of seconds to wait before disconnecting after UE has indicated the absence of received line signal

7.13. AT+CBST　Select Bearer Service Type

AT+CBST write command selects the bearer service **<name>**, the data rate **<speed>** and the connection element **<ce>** to be used when data calls are originated.

AT+CBST　Select Bearer Service Type	
Test Command **AT+CBST=?**	Response **+CBST:** (list of supported **<speed>**s) ,(list of supported **<name>**s) ,(list of supported **<ce>**s) **OK**
Read Command **AT+CBST?**	Response **+CBST: <speed>,<name>,<ce>**

	OK
Write Command **AT+CBST=[\<speed\>[,\<name\>[,\<ce\>]]]**	Response TA selects the bearer service **\<name\>** with data rate **\<speed\>**, and the connection element **\<ce\>** to be used when data calls are originated. **OK**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

\<speed\>	0	Automatic selection of the speed; this setting is possible in case of 3.1kHz modem and non-transparent service
	4	2400 bps (V.22bis)
	5	2400 bps (V.26ter)
	6	4800 bps (V.32)
	7	9600 bps (V.32)
	12	9600 bps (V.34)
	14	14400 bps (V.34)
	15	19200 bps (V.34)
	16	28800 bps (V.34)
	17	32000 bps (V.34)
	39	9600 bps (V.120)
	43	14400 bps (V.120)
	47	19200 bps (V.120)
	48	28800 bps (V.120)
	49	38400 bps (V.120)
	50	48000 bps (V.120)
	51	56000 bps (V.120)
	68	2400 bps (V.110 or X.31 flag stuffing)
	70	4800 bps (V.110 or X.31 flag stuffing)
	71	9600 bps (V.110)
	75	14400 bps (V.110)
	79	19200 bps (V.110 or X.31 flag stuffing)
	80	28800 bps (V.110 or X.31 flag stuffing)
	81	38400 bps (V.110 or X.31 flag stuffing)
	82	48000 bps (V.110 or X.31 flag stuffing)
	83	56000 bps (V.110 or X.31 flag stuffing; this setting can be used in conjunction with asynchronous non-transparent UDI or RDI service in order to get FTM84 64000 bps (X.31 flag stuffing; this setting can be used in conjunction with asyn-chronous non-transparent UDI service in order to get FTM)

	84	64000 bps (X.31 flag stuffing; this setting can be used in conjunction with asynchronous non-transparent UDI service in order to get FTM)
	115	56000 bps (bit transparent)
	116	64000 bps (bit transparent)
	120	32000 bps (PIAFS32k)
	121	64000 bps (PIAFS64k)
	130	28800 bps (multimedia)
	131	32000 bps (multimedia)
	132	33600 bps (multimedia)
	133	56000 bps (multimedia)
	134	64000 bps (multimedia)
\<name\>	0	Asynchronous Modem
	1	Synchronous Modem
	4	Asynchronous Modem (RDI)
	5	Synchronous Modem (RDI)
\<ce\>	0	Transparent
	1	Non-transparent
	2	Both, transparent preferred
	3	Both, non-transparent preferred

NOTE

3GPP TS 22.002 lists the allowed combinations of the sub-parameters.

7.14. AT+CSTA   Select Type of Address

AT+CSTA write command selects the type of number for further dialing commands ATD according to 3GPP Technical Specifications. Test command returns values supported a compound value.

AT+CSTA Select Type of Address	
Test Command **AT+CSTA=?**	Response **+CSTA:** (list of supported **\<type\>**s) **OK**
Read Command **AT+CSTA?**	Response **+CSTA: \<type\>** **OK**
Write Command **AT+CSTA=\<type\>**	Response **OK**

Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

\<type>	128-<u>129</u>-255 Current address type settings, e.g:
	129 Unknown type
	145 International type (contains the character "+")

7.15. AT+CLCC   List Current Calls of ME

The execution command returns the list of all current calls. If the command is executed successfully, but no calls are existed, no information but OK response is sent to the TE.

AT+CLCC List Current Calls of ME	
Test Command **AT+CLCC=?**	Response **OK**
Execution Command **AT+CLCC**	Response TA returns a list of current calls of ME. If command execute successfully but no calls are existed, no information but OK response is sent to TE. **[+CLCC: <id1>,<dir>,<stat>,<mode>,<mpty>[,<number>,<type>[,<alpha>]]** **[+CLCC: <id2>,<dir>,<stat>,<mode>,<mpty>[,<number>,<type>[,<alpha>]]** **[...]** **OK** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms

Parameter

<idx>	Integer type; call identification number as described in 3GPP TS 22.030 sub clause 4.5.5.1; this number can be used in **AT+CHLD** command operations	
<dir>	0	Mobile originated (MO) call
	1	Mobile terminated (MT) call
<stat>	State of the call	
	0	Active
	1	Held
	2	Dialing (MO call)
	3	Alerting (MO call)
	4	Incoming (MT call)
	5	Waiting (MT call)
<mode>	Bearer/tele service	
	0	Voice
	1	Data
	2	FAX
<mpty>	0	Call is not one of multiparty (conference) call parties
	1	Call is one of multiparty (conference) call parties
<number>	Phone number in string type in format specified by **<type>**	
<type>	Type of address of octet in integer format(Refer to 3GPP TS 24.008 , sub clause 10.5.4.7 for details). Usually, it has three kinds of values:	
	129	Unknown type
	145	International type(contains the character "+")
	161	National type
<alpha>	Alphanumeric representation of **<number>** corresponding to the entry found in phonebook	

7.16. AT+CR   Service Reporting Control

AT+CR controls the module whether or not to transmit an intermediate result code **+CR: <serv>** to the TE when a call is being set up.

If it is enabled, an intermediate result code is transmitted at the point during connect negotiation at which the TA has determined which speed and quality of service will be used, before any error control or data compression reports are transmitted, and before any final result code (e.g. **CONNECT**) is transmitted.

AT+CR Service Reporting Control	
Test Command **AT+CR=?**	Response **+CR:** (list of supported **<mode>**s) **OK**

Read Command	Response
AT+CR?	**+CR: <mode>**
	OK
Write Command	Response
AT+CR=[<mode>]	TA controls whether or not intermediate result code **+CR: <serv>** is returned from the TA to the TE when a call set up.
	OK
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<mode>	0	Disable
	1	Enable
<serv>	ASYNC	Asynchronous transparent
	SYNC	Synchronous transparent
	REL ASYNC	Asynchronous non-transparent
	REL SYNC	Synchronous non-transparent
	GPRS	GPRS

7.17. AT+CRC   Set Cellular Result Codes for Incoming Call Indication

AT+CRC controls whether or not to use the extended format of incoming call indication.

When it is enabled, an incoming call is indicated to the TE with unsolicited result code **+CRING: <type>** instead of the normal **RING**.

AT+CRC Set Cellular Result Codes for Incoming Call Indication	
Test Command	Response
AT+CRC=?	**+CRC:** (list of supported **<mode>**s)
	OK
Read Command	Response
AT+CRC?	**+CRC: <mode>**
	OK
Write Command	Response
AT+CRC=[<mode>]	TA controls whether or not the extended format of incoming

| | call indication is used.
OK |
|---|---|
| Maximum Response Time | 300ms |
| Reference
3GPP TS 27.007 | |

Parameter

<mode>	0	Disable extended format
	1	Enable extended format
<type>	ASYNC	Asynchronous transparent
	SYNC	Synchronous transparent
	REL ASYNC	Asynchronous non-transparent
	REL SYNC	Synchronous non-transparent
	VOICE	Voice

Example

AT+CRC=1	//Enable extended format
OK	
+CRING: VOICE	//Indicate incoming call to the TE
ATH	
OK	
AT+CRC=0	//Disable extended format
OK	
RING	//Indicate incoming call to the TE
ATH	
OK	

7.18. AT+CRLP　Select Radio Link Protocol Parameter

AT+CRLP write command sets radio link protocol (RLP) parameters used when non-transparent data calls are originated.

AT+CRLP　Select Radio Link Protocol Parameter	
Test Command
AT+CRLP=?	Response
+CRLP:
(list of supported **<iws>**s),(list of supported **<mws>**s),(list of

	supported **<T1>**s),(list of supported **<N2>**s)
	OK
Read Command **AT+CRLP?**	Response **+CRLP: <iws>,<mws>,<T1>,<N2>** OK
Write Command **AT+CRLP=[<iws>[,<mws>[,<T1>[,<N2>]]]]**	Response TA sets radio link protocol (RLP) parameters used when non-transparent data calls are set up. OK
Maximum Response Time	300ms
Reference 3GPP TS27.007	

Parameter

<iws>	0-61	Interworking window size (IWF to MS)
<mws>	0-61	Mobile window size (MS to IWF)
<T1>	39-48-255	Acknowledgment timer T1 in a unit of 10ms
<N2>	1-6-255	Retransmission attempts

7.19. AT+QHUP   Hang up Call with a Specific Release Cause

AT+QHUP can terminate call(s) with a specific 3GPP TS 24.008 release cause specified by host (Including voice and data calls).

AT+QHUP Hang up Call with a Specific Release Cause	
Test Command **AT+QHUP=?**	Response OK
Write Command **AT+QHUP=<cause>[,<idx>]**	Response OK ERROR If error is related to ME functionality: **+CME ERROR: <err>**

Parameter

\<cause\>	Release cause, 3GPP TS 24.008 release cause to be indicated to the network.	
	1	Release cause "unassigned (unallocated) number"
	16	Release cause "normal call clearing"
	17	Release cause "user busy"
	18	Release cause "no user responding"
	21	Release cause "call rejected"
	27	Release cause "destination out of order"
	31	Release cause "normal, unspecified"
	88	Release cause "incompatible destination"
\<idx\>	Call identification number is an optional index in the list of current calls indicated by **+CLCC**. **+QHUP** will terminate the call identified by the given call number. The default call number 0 is not assigned to any call, but signifies all calls.	
	0	Terminate all known calls. However, if circuit switches data calls and voice calls at the same time, this command only terminates the CSD calls.
	1…7	Terminate the specific call with identification number.

7.20. AT+QECCNUM Configure Emergency Call Numbers

AT+QECCNUM can be used to query, add, delete and replace ECC numbers (emergency call numbers). There are two kinds of ECC numbers, always valid ECC numbers and ECC numbers valid only without SIM. The default always valid ECC numbers are 911 and 112. The default ECC numbers without SIM are 000, 08, 110, 999, 118 and 119. The always valid ECC number 911 and 112 cannot be deleted. ECC numbers can be saved into NV automatically. If the SIM card contains ECC File, the numbers in ECC File can also be regarded as ECC numbers.

The maximal supported ECC numbers of each type is 20.

AT+QECCNUM Configure Emergency Call Numbers	
Test Command **AT+QECCNUM=?**	Response **+QECCNUM: (0-3)** **OK**
Write Command **AT+QECCNUM=\<mode\>,\<type\>[,\<eccnum1\>[,\<eccnum2\>,…[,\<eccnumN\>]]]**	Response If **\<mode\>** is equal to 0, query the ECC numbers, **\<eccnumN\>** should be omitted, return: **+QECCNUM: \<type\>,\<eccnum1\>,\<eccnum2\>[…]** **OK**

	If **<mode>** is not equal to 0: <mode>=1 is used to add the ECC number; **<mode>**=2 is used to delete the ECC number; <**mode**> =3 is used to replace the specified ECC numbers. If <**mode**>=0 , at least one ECC number **<eccnumN>** should be inputted, return: **ERROR**
Read Command **AT+QECCNUM?**	Response **+QECCNUM: 0,<eccnum1>,<eccnum2>[…]** **+QECCNUM: 1,<eccnum1>,<eccnum2>[…]** **OK**
Maximum Response Time	300ms

Parameter

<mode>	ECC number operation mode
	0 Query ECC numbers
	1 Add ECC numbers
	2 Delete ECC numbers
	3 Replace specified numbers
<type>	ECC number type
	0 Valid ECC numbers only without SIM
	1 Always valid ECC numbers
<eccnum>	String type; ECC numbers (e.g.110,119), the maximum length is 7

Example

```
AT+QECCNUM=?                    //Query the supported ECC number operation mode
+QECCNUM: (0-3)

OK
AT+QECCNUM?                     //Query the ECC numbers always valid or without SIM
+QECCNUM: 0,"000","08","110","999","118","119"
+QECCNUM: 1,"112","911"

OK
AT+QECCNUM=1,0,"110","234"      //Add "110" and "234" into the type of ECC numbers without SIM
OK
AT+QECCNUM=0,0                  //Query the ECC numbers without SIM
+QECCNUM: 1, "000","08","110","999","118","119","234"

OK
```

AT+QECCNUM=2,0,"110"   //Delete "110" from the type of ECC numbers without SIM
OK
AT+QECCNUM=0,0   //Query the ECC numbers without SIM
+QECCNUM: 1, "000","08","999","118","119",”234”

OK
AT+QECCNUM=3,0,"115"   //Replace ECC numbers without SIM with "115"
OK
AT+QECCNUM=0,0   //Query the ECC numbers without SIM
+QECCNUM: 1, "115”

OK
AT+QECCNUM=0,1   //Query the ECC numbers always valid
+QECCNUM: 0,”112","911"

OK
AT+QECCNUM=1,1,"110","234"   //Add "110" and "234" into always valid ECC numbers

OK
AT+QECCNUM=0,1   //Query the ECC numbers always valid
+QECCNUM: 0,”112","911",”110”,”234”

OK
AT+QECCNUM=3,1,"115"   //Replace the always valid ECC numbers with "115"
OK
AT+QECCNUM=0,1   //Query the ECC numbers always valid
+QECCNUM: 0,”112","911",”115”

OK

8 Phonebook Commands

8.1. AT+CNUM Subscriber Number

AT+CNUM can get the subscribers own number (s) from the SIM.

AT+CNUM Subscriber Number	
Test Command **AT+CNUM=?**	Response **OK**
Execution Command **AT+CNUM**	Response **+CNUM:** **[<alpha1>],<number1>,<type1>[,<speed>,<service>[,<itc>]]** **[<CR><LF>** **+CNUM: [<alpha2>],<number2>,<type2>[,<speed>,<service> [,<itc>]]** **[...]]** **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms
Reference 3GPP 27.007	

Parameter

<alpha*x*>	Optional alphanumeric string associated with **<number*x*>**; the used character set should be the one selected with command Select TE Character Set **+CSCS**
<number*x*>	String type phone number of format specified by **<type*x*>**
<type*x*>	Type of address of octet in integer format (Refer to 3GPP TS 24.008, subclause 10.5.4.7 for details). Usually, it has three kinds of values: 129 Unknown type

	145	International type (contains the character "+")
	161	National type
<speed>	As defined by the **+CBST** command	
<service>	Service related to the phone number:	
	0	Asynchronous modem
	1	Synchronous modem
	2	PAD Access (asynchronous)
	3	Packet Access (synchronous)
	4	Voice
	5	FAX
<itc>	Information transfer capability:	
	0	3.1 kHz
	1	UDI

8.2. AT+CPBF   Find Phonebook Entries

AT+CPBF can search the phonebook entries starting with the given **<findtext>** string from the current phonebook memory storage selected with **+CPBS**, and return all found entries sorted in alphanumeric order.

AT+CPBF Find Phonebook Entries	
Test Command **AT+CPBF=?**	Response **+CPBF: <nlength>,<tlength>** **OK**
Write Command **AT+CPBF=<findtext>**	Response **[+CPBF: <index>,<number>,<type>,<text>]** **[…]** **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	Depends on the storage of phonebook entries.
Reference 3GPP 27.007	

Parameter

\<nlength\>	Integer type, indicates the maximum length of field **\<number\>**
\<tlength\>	Integer type, indicates the maximum length of field **\<text\>**
\<findtext\>	String type, field of maximum length **\<tlength\>** in current TE character set specified by **+CSCS**
\<number\>	Phone number
\<index\>	Integer type, in the range of location numbers of phone book memory
\<type\>	Type of address of octet in integer format (Refer to 3GPP TS 24.008, subclause 10.5.4.7 for details). Usually, it has three kinds of values:
	129 Unknown type
	145 International type(contains the character "+")
	161 National type
\<text\>	String type, field of maximum length **\<tlength\>** in current TE character set specified by **+CSCS**

8.3. AT+CPBR Read Phonebook Entries

AT+CPBF can return phonebook entries in location number range **\<index1\>... \<index2\>** from the current phonebook memory storage selected with **+CPBS**. If **\<index2\>** is left out, only location **\<index1\>** is returned.

AT+CPBR Read Phonebook Entries	
Test Command **AT+CPBR=?**	Response **+CPBR:** (list of supported **\<index\>**s),**\<nlength\>**,**\<tlength\>** **OK**
Write Command **AT+CPBR=\<index1\>[,\<index2\>]**	Response **+CPBR: \<index1\>,\<number\>,\<type\>,\<text\>** **[+CPBR: \<index2\>,\<number\>,\<type\>,\<text\>** **[…]]** **OK** If error is related to ME functionality: **+CME ERROR: \<err\>**
Maximum Response Time	Depends on the storage of phonebook entries.
Reference 3GPP 27.007	

Parameter

\<index\>	Integer type, in the range of location numbers of phone book memory
\<nlength\>	Integer type, indicates the maximum length of field **\<number\>**
\<tlength\>	Integer type, indicates the maximum length of field **\<text\>**
\<number\>	Phone number
\<index1\>	The first phone book record to read
\<index2\>	The last phonebook record to read
\<type\>	Type of address of octet in integer format (Refer to 3GPP TS 24.008, subclause 10.5.4.7 for details). Usually, it has three kinds of values:
	129 Unknown type
	145 International type(contains the character "**+**")
	161 National type
\<text\>	String type, field of maximum length **\<tlength\>** in current TE character set specified by **+CSCS**

8.4. AT+CPBS Select Phonebook Memory Storage

AT+CPBS selects phonebook memory storage, which is used by other phonebook commands. Read command returns currently selected memory, and number of used locations and total number of locations in the memory when supported by manufacturer. Test command returns supported storages as compound value.

AT+CPBS Select Phonebook Memory Storage	
Test Command **AT+CPBS=?**	Response **+CPBS:** (list of supported **\<storage\>**s) **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: \<err\>**
Read Command **AT+CPBS?**	Response **+CPBS: \<storage\>[,\<used\>,\<total\>]** **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: \<err\>**
Write Command **AT+CPBS=\<storage\>**	Response **OK**

	ERROR
	If error is related to ME functionality:
	+CME ERROR: <err>
Maximum Response Time	300ms
Reference 3GPP 27.007	

Parameter

<storage>	"SM"	SIM phonebook
	"FD"	SIM fix dialing-phone book (**+CPBW** operation need the authority of PIN2)
	"LD"	SIM last-dialing-phone book (read only)
	"BL"	Black list in SIM
	"ON"	SIM own numbers (MSISDNs) list
	"EC"	SIM emergency-call-codes phonebook (read only)
	"SN"	Service dial number (read only)
<used>		Integer type, indicates the total number of used locations in selected memory
<total>		Integer type, indicates the total number of locations in selected memory

8.5. AT+CPBW   Write Phonebook Entry

AT+CPBW writes phonebook entry in location number **<index>** in the current phonebook memory storage selected with **+CPBS**. It can also delete a phonebook entry in location number **<index>.**

AT+CPBW Write Phonebook Entry	
Test Command **AT+CPBW=?**	Response **+CPBW:** (The range of supported **<index>**s)**, <nlength>**, (list of supported **<type>**s), **<tlength>** **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Write Command **AT+CPBW=[<index>][,<number>[,<type>[,<text>]]]**	Response **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms

Reference	
3GPP 27.007	

Parameter

<index>	Integer type, in the range of location numbers of phone book memory. If **<index>** is not given, the first free entry will be used. If **<index>** is given as the only parameter, the phonebook entry specified by **<location>** is deleted
<nlength>	Integer type, indicates the maximum length of field **<number>**
<tlength>	Integer type, indicates the maximum length of field **<text>**
<number>	Phone number
<type>	Type of address of octet in integer format (Refer to 3GPP TS 24.008, subclause 10.5.4.7 for details). Usually, it has three kinds of values:
	129 Unknown type
	145 International type (contains the character "+")
	161 National type
<text>	String type field of maximum length **<tlength>** in current TE character set specified by **+CSCS**

Example

```
AT+CSCS="GSM"
OK
AT+CPBW=10,"15021012496",129,"QUECTEL"
OK                              //Make a new phonebook entry at location 10
AT+CPBW=10                      //Delete entry at location 10
OK
```

9 Short Message Service Commands

9.1. AT+CSMS   Select Message Service

AT+CSMS selects message service **<service>** and returns the types of messages supported by the ME.

AT+CSMS Select Message Service	
Test Command **AT+CSMS=?**	Response **+CSMS:** (list of supported **<service>**s) **OK**
Read Command **AT+CSMS?**	Response **+CSMS: <service>,<mt>,<mo>,<bm>** **OK**
Write Command **AT+CSMS=<service>**	Response **+CSMS: <mt>,<mo>,<bm>** **OK** If error is related to ME functionality: **+CMS ERROR: <err>**
Maximum Response Time	300ms
Reference 3GPP TS 27.005	

Parameter

<service>	Type of message service	
	0	3GPP TS 23.040 and 3GPP TS 23.041 (the syntax of SMS AT commands is compatible with 3GPP TS 27.005 Phase 2 version 4.7.0; Phase 2+ features which do not require new command syntax may be supported, e.g. correct routing of messages with new Phase 2+ data coding schemes)
	1	3GPP TS 23.040 and 3GPP TS 23.041 (the syntax of SMS AT commands is compatible with 3GPP TS 27.005 Phase 2+ version; the requirement of

		<service> setting 1 is mentioned under corresponding command description-s)
<mt>	Mobile terminated messages	
	0	Type not supported
	<u>1</u>	Type supported
<mo>	Mobile originated messages	
	0	Type not supported
	<u>1</u>	Type supported
<bm>	Broadcast type messages	
	0	Type not supported
	<u>1</u>	Type supported

Example

```
AT+CSMS=?                              //Test command
+CSMS: (0,1)

OK
AT+CSMS=1                              //Set type of message service as 1
+CSMS: 1,1,1

OK
AT+CSMS?                               //Read command
+CSMS: 1,1,1,1

OK
```

9.2. AT+CMGF　Message Format

AT+CMGF specifies the input and output format of the short messages. **<mode>** indicates the format of messages used with send, list, read and write commands and unsolicited result codes resulting from received messages.

Mode can be either PDU mode (entire TP data units used) or text mode (headers and body of the messages given as separate parameters). Text mode uses the value of parameter **<chset>** specified by command **+CSCS** to inform the character set to be used in the message body in the TA-TE interface.

AT+CMGF　Message Format	
Test Command **AT+CMGF=?**	Response **+CMGF:** (list of supported **<mode>**s) **OK**

Read Command **AT+CMGF?**	Response **+CMGF: <mode>** **OK**
Write Command **AT+CMGF=<mode>**	Response TA sets parameter to denote which kind of I/O format of messages is used. **OK**
Maximum Response Time	300ms
Reference 3GPP TS 27.005	

Parameter

<mode>	<u>0</u> 1	PDU mode Text mode

9.3. AT+CSCA   Service Center Address

AT+CSCA write command updates the SMSC address when mobile originated SMS are transmitted. In text mode, the setting is used by write commands. In PDU mode, setting is used by the same commands, but only when the length of the SMSC address is coded into the **<pdu>** parameter which equals to zero.

AT+CSCA Service Center Address	
Test Command **AT+CSCA=?**	Response **OK**
Read Command **AT+CSCA?**	Response **+CSCA: <sca>,<tosca>** **OK**
Write Command **AT+CSCA=<sca>[,<tosca>]**	Response **OK** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms
Reference 3GPP TS 27.005	

Parameter

\<sca\>	Service center address. 3GPP TS 24.011 RP SC address Address-Value field in string format; BCD numbers (or GSM 7 bit default alphabet characters) are converted to characters of the currently selected TE character set (refer to command **+CSCS** in 3GPP TS 27.007); type of address is given by **\<tosca\>**
\<tosca\>	Type of service center address. 3GPP TS 24.011 RP SC address Type-of-Address octet in integer format (default refer to **\<toda\>**)

Example

AT+CSCA="+8613800210500",145	//Set SMS service center address
OK	
AT+CSCA?	//Query SMS service center address
+CSCA: "+8613800210500",145	
OK	

9.4. AT+CPMS   Preferred Message Storage

AT+CPMS selects memory storages **\<mem1\>**, **\<mem2\>** and **\<mem3\>** for reading, writing, etc..

AT+CPMS Preferred Message Storage	
Test Command **AT+CPMS=?**	Response **+CPMS:** (list of supported **\<mem1\>**s),(list of supported **\<mem2\>**s),(list of supported **\<mem3\>**s) **OK**
Read Command **AT+CPMS?**	Response **+CPMS:** **\<mem1\>,\<used1\>,\<total1\>,\<mem2\>,\<used2\>,\<total2\>,\<mem3\>,\<used3\>,\<total3\>** **OK**
Write Command **AT+CPMS=\<mem1\>[,\<mem2\>[,\<mem3\>]]**	Response TA selects memory storages **\<mem1\>**, **\<mem2\>** and **\<mem3\>** to be used for reading, writing, etc. **+CPMS:** **\<used1\>,\<total1\>,\<used2\>,\<total2\>,\<used3\>,\<total3\>** **OK**

	If error is related to ME functionality: **+CMS ERROR: <err>**
Maximum Response Time	300ms
Reference 3GPP TS 27.005	

Parameter

<mem1>	Messages to be read and deleted from this memory storage	
	"BM"	Broadcast message storage
	"SM"	SIM message storage
	"SR"	Status report storage
<mem2>	Messages will be written and sent to this memory storage	
	"SM"	SIM message storage
<mem3>	Storage to which received SMs are preferred to be stored (unless forwarded directly to TE. Refer command New Message Indications **+CNMI**). Refer **<mem1>** for defined values. Received CBMs are always stored in "BM" (or some manufacturer specific storage) unless directly forwarded to TE. Received status reports are always stored in "SR" (or some manufacturer specific storage) unless directly forwarded to TE.	
	"BM"	Broadcast message storage
	"SM"	SIM message storage
	"SR"	Status report storage
<usedx>	Integer type, number of current messages in **<memx>**	
<totalx>	Integer type, total number of messages which can be stored in **<memx>**	

Example

AT+CPMS="SM","SM","SM"	//Set SMS message storage as "SM"
+CPMS: 0,50,0,50,0,50	
OK	
AT+CPMS?	//Query the currently SMS message storage
+CPMS: "SM",0,50,"SM",0,50,"SM",0,50	
OK	

9.5. AT+CMGD   Delete Message

AT+CMGD deletes a short message from the preferred message storage **<mem1>** location **<index>**. If **<delflag>** is presented and not set to 0, then the ME shall ignore **<index>** and follow the rules of **<delflag>** shown as below.

AT+CMGD   Delete Message

Test Command **AT+CMGD=?**	Response **+CMGD:** (list of supported **<index>**s),(list of supported **<delflag>**s) **OK**
Write Command **AT+CMGD=<index>[,<delflag>]**	Response TA deletes message from preferred message storage **<mem1>** location **<index>**. **OK** If error is related to ME functionality: **+CMS ERROR:<err>**
Maximum Response Time	300ms. Note: Operation of **<delflag>** depends on the storage of deleted messages.
Reference 3GPP TS 27.005	

Parameter

<index>	Integer type, in the range of location numbers supported by the associated memory	
<delflag>	<u>0</u>	Delete message specified in **<index>**
	1	Delete all read messages from **<mem1>** storage, leaving unread messages and stored mobile originated messages (whether sent or not) untouched
	2	Delete all read messages from **<mem1>** storage and sent mobile originated messages, leaving unread messages and unsent mobile originated messages untouched
	3	Delete all read messages from **<mem1>** storage, sent and unsent mobile originated messages, leaving unread messages untouched
	4	Delete all messages from **<mem1>** storage

Example

AT+CMGD=1	//Delete message specified in **<index>=1**
OK	
AT+CMGD=1,4	//Delete all messages from **<mem1>** storage
OK	

9.6. AT+CMGL   List Messages

AT+CMGL write command returns messages with status value **<stat>** from preferred message storage **<mem1>** to the TE. If the status of the message is "REC UNREAD", the status in the storage changes to "REC READ". When executing command AT+CMGL without status value **<stat>**, it will report the list of SMS with "REC UNREAD" status.

AT+CMGL List Messages	
Test Command **AT+CMGL=?**	Response **+CMGL:** (list of supported **<stat>**s) **OK**
Write Command **AT+CMGL=<stat>**	Response If text mode (**+CMGF=1**) and command successful: For SMS-SUBMITs and/or SMS-DELIVERs: **+CMGL:** **<index>,<stat>,<oa/da>,[<alpha>],[<scts>][,<tooa/toda>,<length>]<CR><LF><data>[<CR><LF>** **+CMGL:** **<index>,<stat>,<da/oa>,[<alpha>],[<scts>][,<tooa/toda>,<length>]<CR><LF><data>[...]]** For SMS-STATUS-REPORTs: **+CMGL:** **<index>,<stat>,<fo>,<mr>,[<ra>],[<tora>],<scts>,<dt>,<st>[<CR><LF>** **+CMGL:** **<index>,<stat>,<fo>,<mr>,[<ra>],[<tora>],<scts>,<dt>,<st>[...]]** For SMS-COMMANDs: **+CMGL: <index>,<stat>,<fo>,<ct>[<CR><LF>** **+CMGL: <index>,<stat>,<fo>,<ct>[...]]** For CBM storage: **+CMGL:** **<index>,<stat>,<sn>,<mid>,<page>,<pages><CR><LF><data>[<CR><LF>** **+CMGL:** **<index>,<stat>,<sn>,<mid>,<page>,<pages><CR><LF><data>[...]]** **OK**

	Else if PDU mode (**+CMGF=0**) and Command successful: **+CMGL:** **<index>,<stat>,[<alpha>],<length><CR><LF><pdu><CR>** **<LF>** **+CMGL:** **<index>,<stat>,[alpha],<length><CR><LF><pdu>[...]]** **OK** Else if error is related to ME functionality: **+CMS ERROR: <err>**
Execution Command **AT+CMGL**	Response List all messages with "REC UNREAD" status from message storage **<mem1>**, then status in the storage changes to "REC READ".
Maximum Response Time	300ms. Note: Operation of **<stat>** depends on the storage of listed messages.
Reference 3GPP TS 27.005	

Parameter

<stat>	In text mode:	
	"REC UNREAD"	Received unread messages
	"REC READ"	Received read messages
	"STO UNSENT"	Stored unsent messages
	"STO SENT"	Stored sent messages
	"ALL"	All messages
	In PDU mode:	
	0	Received unread messages
	1	Received read messages
	2	Stored unsent messages
	3	Stored sent messages
	4	All messages
<index>	Integer type, in the range of location numbers supported by the associated memory	
<da>	Destination Address. 3GPP TS 23.040 TP-Destination-Address Address-Value field in string format; BCD numbers (or GSM 7 bit default alphabet characters) are converted to characters of the currently selected TE character set (refer to command **+CSCS** in 3GPP TS 27.007); type of address is given by **<toda>**	
<oa>	Originating address. 3GPP TS 23.040 TP-Originating-Address Address-Value field in string format; BCD numbers (or GSM 7 bit default alphabet characters) are converted to characters of the currently selected TE character set (refer to command **+CSCS** in	

	TS 27.007); type of address is given by **<tooa>**
<alpha>	String type alphanumeric representation of **<da>** or **<oa>** corresponding to the entry found in MT phonebook; implementation of this feature is manufacturer specified; the used character set should be the one selected with command Select TE Character Set +CSCS (see definition of this command in 3GPP TS 27.007)
<scts>	Service center time stamp. 3GPP TS 23.040 TP-Service-Centre-Time-Stamp in time-string format (refer to **<dt>**)
<toda>	Type of recipient address. 3GPP TS 24.011 TP-Recipient-Address Type-of-Address octet in integer format.
<tooa>	Type of originating address. 3GPP TS 24.011 TP-Originating-Address Type-of-Address octet in integer format (default refer to **<toda>**)
<length>	Message length, integer type, indicating in the text mode (**+CMGF**=1) the length of the message body **<data>** (or **<cdata>**) in characters; or in PDU mode (+CMGF=0), the length of the actual TP data unit in octets (i.e. the RP layer SMSC address octets are not counted in the length)
<data>	In the case of SMS: 3GPP TS 23.040 TP-User-Data in text mode responses; format: - If **<dcs>**, indicates that 3GPP TS 23.038 GSM 7 bit default alphabet is used and **<fo>** indicates that 3GPP TS 23.040 TP-User-Data-Header-Indication is not set - If TE character set other than "HEX" (refer to command Select TE Character Set +CSCS in 3GPP TS 27.007): ME/TA converts GSM alphabet into current TE character set according to rules of Annex A - If TE character set is "HEX": ME/TA converts each 7-bit character of GSM 7 bit default alphabet into two IRA character long hexadecimal number (e.g. character Π (GSM 7 bit default alphabet 23) is presented as 17 (IRA 49 and 55)) - If **<dcs>**, indicates that 8-bit or UCS2 data coding scheme is used, or **<fo>** indicates that 3GPP TS 23.040 TP-User-Data-Header-Indication is set: ME/TA converts each 8-bit octet into two IRA character long hexadecimal number (e.g. octet with integer value 42 is presented to TE as two characters 2A (IRA 50 and 65)) In the case of CBS: 3GPP TS 23.041 CBM Content of Message in text mode responses; format: - If **<dcs>**, indicates that 3GPP TS 23.038 GSM 7 bit default alphabet is used: - If TE character set other than "HEX" (refer to command +CSCS in 3GPP TS27.007): ME/TA converts GSM alphabet into current TE character set according to rules of Annex A - If TE character set is "HEX": ME/TA converts each 7-bit character of the GSM 7 bit default alphabet into two IRA character long hexadecimal number - If **<dcs>**, indicates that 8-bit or UCS2 data coding scheme is used: ME/TA converts each 8-bit octet into two IRA character long hexadecimal number
<pdu>	In the case of SMS: 3GPP TS 24.011 SC address followed by 3GPP TS 23.040 TPDU in hexadecimal format: ME/TA converts each octet of TP data unit into two IRA character long hexadecimal number (e.g. octet with integer value 42 is presented to TE as two characters 2A (IRA 50 and 65))3GPP TS 27.007

Example

AT+CMGF=1	//Set SMS message format as text mode
OK	
AT+CMGL="ALL"	//List all messages from message storage
+CMGL: 1,"STO UNSENT","",,	
<This is a test from Quectel>	
+CMGL: 2,"STO UNSENT","",,	
<This is a test from Quectel>	
OK	

9.7. AT+CMGR   Read Message

AT+CMGR write command returns SMS message with location value **<index>** from message storage **<mem1>** to the TE. If status of the message is "REC UNREAD", status in the storage changes to "REC READ".

AT+CMGR Read Message	
Test Command **AT+CMGR=?**	Response **OK**
Write Command **AT+CMGR=<index>**	Response TA returns SMS message with location value **<index>** from message storage **<mem1>** to the TE. If status of the message is "REC UNREAD", status in the storage changes to "REC READ". 1) If text mode (**+CMGF=1**) and command is executed successfully: For SMS-DELIVER: **+CMGR:** **<stat>,<oa>,[<alpha>],<scts>[,<tooa>,<fo>,<pid>,<dcs>,<sca>,<tosca>,<length>]<CR><LF><data>** **OK** For SMS-SUBMIT: **+CMGR:** **<stat>,<da>,[<alpha>][,<toda>,<fo>,<pid>,<dcs>,[<vp>],<sca>,<tosca>,<length>]<CR><LF><data>**

	OK
	For SMS-STATUS-REPORTs: **+CMGR:** **<stat>,<fo>,<mr>,[<ra>],[<tora>],<scts>,<dt>,<st>** **OK** For SMS-COMMANDs: **+CMGR:** **<stat>,<fo>,<ct>[,<pid>,[<mn>],[<da>],[<toda>],<length><CR><LF><cdata>]** **OK** For CBM storage: **+CMGR:** **<stat>,<sn>,<mid>,<dcs>,<page>,<pages><CR><LF><data>** **OK** 2) If PDU mode (**+CMGF=0**) and command successful: **+CMGR: <stat>,[<alpha>],<length><CR><LF><pdu>** **OK** 3) If error is related to ME functionality: **+CMS ERROR: <err>**
Maximum Response Time	Depends on the length of message content.
Reference 3GPP TS 27.005	

Parameter

<index>	Integer type, in the range of location numbers supported by the associated memory		
<stat>	PDU mode	Text mode	Explanation
	0	"REC UNREAD"	Received unread messages
	1	"REC READ"	Received read messages
	2	"STO UNSENT"	Stored unsent messages
	3	"STO SENT"	Stored sent messages
	4	"ALL"	All messages
<alpha>	String type alphanumeric representation of **<da>** or **<oa>** corresponding to the entry		

	found in MT phonebook; implementation of this feature is manufacturer specified; the used character set should be the one selected with command Select TE Character Set +CSCS (see definition of this command in 3GPP TS 27.007)
\<da\>	Destination address. 3GPP TS 23.040 TP-Destination-Address Address-Value field in string format; BCD numbers (or GSM 7 bit default alphabet characters) are converted to characters of the currently selected TE character set (refer to command **+CSCS** in 3GPP TS 27.007); type of address is given by **\<toda\>**
\<oa\>	Originating address. 3GPP TS 23.040 TP-Originating-Address Address-Value field in string format; BCD numbers (or GSM 7 bit default alphabet characters) are converted to characters of the currently selected TE character set (refer to command **+CSCS** in TS 27.007); type of address is given by **\<tooa\>**
\<scts\>	Service center time stamp. 3GPP TS 23.040 TP-Service-Centre-Time-Stamp in time-string format (refer to **\<dt\>**)
\<fo\>	First octet. Depending on the command or result code: First octet of 3GPP TS 23.040 SMS-DELIVER, SMS-SUBMIT (default 17), SMS-STATUS-REPORT, or SMS-COMMAND in integer format. If a valid value has been entered once, parameter can be omitted
\<pid\>	Protocol identifier. 3GPP TS 23.040 TP-Protocol-Identifier in integer format (default 0)
\<dcs\>	Data coding scheme. Depending on the command or result code: 3GPP TS 23.038 SMS Data Coding Scheme (default 0), or Cell Broadcast Data Coding Scheme in integer format
\<vp\>	Validity period. Depending on SMS-SUBMIT **\<fo\>** setting: 3GPP TS 23.040 TP-Validity-Period either in integer format or in time-string format (refer to **\<dt\>**)
\<mn\>	Message number. 3GPP TS 23.040 TP-Message-Number in integer format
\<mr\>	Message reference. 3GPP TS 23.040 TP-Message-Reference in integer format
\<ra\>	Recipient address. 3GPP TS 23.040 TP-Recipient-Address Address-Value field in string format; BCD numbers (or GSM default alphabet characters) are converted to characters of the currently selected TE character set (refer to command AT+CSCS); type of address given by **\<tora\>**
\<tora\>	Type of recipient address. 3GPP TS 24.011 TP-Recipient-Address Type-of-Address octet in integer format (default refer to **\<toda\>**)
\<toda\>	Type of recipient address. 3GPP TS 24.011 TP-Recipient-Address Type-of-Address octet in integer format
\<tooa\>	Type of originating address.3GPP TS 24.011 TP-Originating-Address Type-of-Address octet in integer format (default refer to **\<toda\>**)
\<sca\>	Service center address. 3GPP TS 24.011 RP SC address Address-Value field in string format; BCD numbers (or GSM 7 bit default alphabet characters) are converted to characters of the currently selected TE character set (refer to command +CSCS in 3GPP TS 27.007); type of address is given by **\<tosca\>**
\<tosca\>	Type of service center address. 3GPP TS 24.011 RP SC address Type-of-Address octet in integer format (default refer to **\<toda\>**)
\<length\>	Message length, integer type, indicating in the text mode (+CMGF=1) the length of the message body **\<data\>** (or **\<cdata\>**) in characters; or in PDU mode (+CMGF=0), the

	length of the actual TP data unit in octets (i.e. the RP layer SMSC address octets are not counted in the length)
\<data\>	In the case of SMS: 3GPP TS 23.040 TP-User-Data in text mode responses; format:
	- If **\<dcs\>**, indicates that 3GPP TS 23.038 GSM 7 bit default alphabet is used and **\<fo\>** indicates that 3GPP TS 23.040 TP-User-Data-Header-Indication is not set:
	- If TE character set other than "HEX" (refer to command Select TE Character Set +CSCS in 3GPP TS 27.007): ME/TA converts GSM alphabet into current TE character set according to rules of Annex A
	- If TE character set is "HEX": ME/TA converts each 7-bit character of GSM 7 bit default alphabet into two IRA character long hexadecimal number (e.g. character Π (GSM 7 bit default alphabet 23) is presented as 17 (IRA 49 and 55))
	- If **\<dcs\>**, indicates that 8-bit or UCS2 data coding scheme is used, or **\<fo\>** indicates that 3GPP TS 23.040 TP-User-Data-Header-Indication is set: ME/TA converts each 8-bit octet into two IRA character long hexadecimal number (e.g. octet with integer value 42 is presented to TE as two characters 2A (IRA 50 and 65)
	In the case of CBS: 3GPP TS 23.041 CBM Content of Message in text mode responses; format:
	- If **\<dcs\>**, indicates that 3GPP TS 23.038 GSM 7 bit default alphabet is used:
	- If TE character set other than "HEX" (refer to command +CSCS in 3GPP TS 27.007): ME/TA converts GSM alphabet into current TE character set according rules of Annex A
	- If TE character set is "HEX": ME/TA converts each 7-bit character of the GSM 7 bit default alphabet into two IRA character long hexadecimal number
	- If **\<dcs\>**, indicates that 8-bit or UCS2 data coding scheme is used: ME/TA converts each 8-bit octet into two IRA character long hexadecimal number
\<pdu\>	In the case of SMS: 3GPP TS 24.011 SC address followed by 3GPP TS 23.040 TPDU in hexadecimal format: ME/TA converts each octet of TP data unit into two IRA character long hexadecimal number (e.g. octet with integer value 42 is presented to TE as two characters 2A (IRA 50 and 65)) 3GPP TS 27.007

Example

```
+CMTI: "SM",3                          //Indicates that new message has been received and saved
                                         to <index>=3 of "SM"
AT+CSDH=1
OK
AT+CMGR=3                              //Read message
+CMGR: "REC UNREAD","+8615021012496",,"2014/02/13 15:06:37+32",145,4,0,0,"+8
613800210500",145,27

<This is a test from Quectel>

OK
```

9.8. AT+CMGS　Send Message

AT+CMGS write command sends a short message from TE to network (SMS-SUBMIT). After invoking the write command, wait for the prompt ">" and then start to write the message. Then enter **<CTRL-Z>** to indicate the ending of PDU and begin to send the message. Sending can be cancelled by giving **<ESC>** character. Abortion is acknowledged with "**OK**", though the message will not be sent. The message reference **<mr>** is returned to the TE on successful message delivery. The value can be used to identify message upon unsolicited delivery status report result code.

AT+CMGS　Send Message	
Test Command **AT+CMGS=?**	Response **OK**
Write Command 1) If text mode (**+CMGF=1**): **AT+CMGS=<da>[,<toda>]**<CR> **text is entered** <ctrl-Z/ESC> ESC quits without sending 2) If PDU mode (**+CMGF=0**): **AT+CMGS=<length>**<CR> **PDU is given** <ctrl-Z/ESC>	Response TA sends message from a TE to the network (SMS-SUBMIT). Message reference value **<mr>** is returned to the TE on successful message delivery. Optionally (when **+CSMS <service>** value is 1 and network supports) **<scts>** is returned. Values can be used to identify message upon unsolicited delivery status report result code. If text mode (**+CMGF=1**) and sent successfully: **+CMGS: <mr>** **OK** If PDU mode (**+CMGF=0**) and sent successfully: **+CMGS: <mr>** **OK** If error is related to ME functionality: **+CMS ERROR: <err>**
Maximum Response Time	120s, determined by network.
Reference 3GPP TS 27.005	

Parameter

<da>	Destination address. 3GPP TS 23.040 TP-Destination-Address Address-Value field in string format; BCD numbers (or GSM 7 bit default alphabet characters) are converted to characters of the currently selected TE character set (refer to command **+CSCS** in 3GPP TS 27.007); type of address is given by **<toda>**
<toda>	Type of recipient address. 3GPP TS 24.011 TP-Recipient-Address Type-of-Address

	octet in integer format
<length>	Message length. Integer type, indicating in the text mode (**+CMGF**=1) the length of the message body **<data>** (or **<cdata>**) in characters; or in PDU mode (**+CMGF**=0), the length of the actual TP data unit in octets (i.e. the RP layer SMSC address octets are not counted in the length)
<mr>	Message reference. 3GPP TS 23.040 TP-Message-Reference in integer format

Example

AT+CMGF=1	//Set SMS message format as text mode
OK	
AT+CSCS="GSM"	//Set character set as GSM which is used by the TE
OK	
AT+CMGS="15021012496"	
> <This is a test from Quectel>	//Enter in text, **<CTRL+Z>** send message
+CMGS: 247	
OK	
AT+CMGF=1	//Set SMS message format as text mode
OK	
AT+CSCS="GSM"	//Set character set as GSM which is used by the TE
OK	
AT+CMGS="15021012496"	
> <This is a test from Quectel>	//Enter in text, **<ESC>** quits without sending
OK	

9.9. AT+CMMS   More Messages to Send

AT+CMMS controls the continuity of the SMS relay protocol link. If the feature is enabled (and supported by the currently used network) multiple messages can be sent faster as the link is kept open.

AT+CMMS More Messages to Send	
Test Command **AT+CMMS=?**	Response **+CMMS:** (list of supported**<n>**s) **OK**
Read Command **AT+CMMS?**	Response **+CMMS: <n>** **OK**

Write Command **AT+CMMS=\<n>**	Response **OK** **ERROR** If error is related to ME functionality: **+CMS ERROR: \<err>**
Maximum Response Time	120s, determined by network.
Reference 3GPP TS 27.005	

Parameter

\<n>	<u>0</u>	Feature disabled
	1	Keep enabled until the time between the response of the latest message send command (**+CMGS**, **+CMSS**, etc.) and the next send command exceeds 1-5 seconds (the exact value is up to ME implementation), then ME shall close the link and TA switches **\<n>** back to 0 automatically
	2	Enable (if the time between the response of the latest message send command and the next send command exceeds 1-5 seconds (the exact value is up to ME implementation), ME shall close the link but TA will not switch **\<n>** back to 0 automatically)

9.10. AT+CMGW   Write Message to Memory

AT+CMGW write and execution commands store a short message from TE to memory storage **\<mem2>**. Memory location **\<index>** of the stored message is returned. Message status will be set to "stored unsent" by default, but parameter **\<stat>** also allows other status values to be given.

The syntax of input text is same as the one specified in the write command **+CMGS**.

AT+CMGW Write Message to Memory	
Test Command **AT+CMGW=?**	Response **OK**
Write Command 1) If text mode (**+CMGF**=1): **AT+CMGW=\<oa/da>[,\<tooa/toda>[,\<stat>]]** \<CR> **text is entered** **\<ctrl-Z/ESC>** \<ESC> quits without sending	Response TA transmits SMS message (either SMS-DELIVER or SMS-SUBMIT) from TE to memory storage **\<mem2>**. Memory location **\<index>** of the stored message is returned. By default message status will be set to 'stored unsent', but parameter **\<stat>** also allows 'stored sent' status to be given. If writing is successful:

2) If PDU mode (**+CMGF**=0): **AT+CMGW=<length>[,<stat>]**<CR> **PDU is given** <ctrl-Z/ESC>	**+CMGW: <index>** **OK** If error is related to ME functionality: **+CMS ERROR: <err>**
Maximum Response Time	300ms
Reference 3GPP TS 27.005	

Parameter

<da>	Destination address. 3GPP TS 23.040 TP-Destination-Address Address-Value field in string format; BCD numbers (or GSM 7 bit default alphabet characters) are converted to characters of the currently selected TE character set (refer to command **+CSCS** in 3GPP TS 27.007); type of address is given by **<toda>**
<oa>	Originating address. 3GPP TS 23.040 TP-Originating-Address Address-Value field in string format; BCD numbers (or GSM 7 bit default alphabet characters) are converted to characters of the currently selected TE character set (refer to command **+CSCS** in TS 27.007); type of address given by **<tooa>**
<tooa>	Type of originating address. 3GPP TS 24.011 TP-Originating-Address Type-of-Address octet in integer format (default refer to **<toda>**)

<stat>	PDU mode	Text mode	Explanation
	0	"REC UNREAD"	Received unread messages
	1	"REC READ"	Received read messages
	2	"STO UNSENT"	Stored unsent messages
	3	"STO SENT"	Stored sent messages
	4	"ALL"	All messages

<toda>	Type of recipient address. 3GPP TS 24.011 TP-Recipient-Address Type-of-Address octet in integer format
<length>	Message length. Integer type, indicating in the text mode (**+CMGF**=1) the length of the message body **<data>** (or **<cdata>**) in characters; or in PDU mode (**+CMGF**=0), the length of the actual TP data unit in octets (i.e. the RP layer SMSC address octets are not counted in the length)
<pdu>	In the case of SMS: 3GPP TS 24.011 SC address followed by 3GPP TS 23.04TPDU in hexadecimal format: ME/TA converts each octet of TP data unit into two IRA character long hexadecimal number (e.g. octet with integer value 42 is presented to TE as two characters 2A (IRA 50 and 65))
<index>	Index of message in selected storage **<mem2>**

Example

AT+CMGF=1	//Set SMS message format as text mode
OK	
AT+CSCS="GSM"	//Set character set as GSM which is used by the TE
OK	
AT+CMGW="15021012496"	
> <This is a test from Quectel>	//Enter in text, **<CTRL+Z>** write message
+CMGW: 4	
OK	
AT+CMGF=0	//Set SMS message format as PDU mode
OK	
AT+CMGW=18	
> 0051FF00000008000A0500030002016D4B8BD5	
+CMGW: 5	
OK	
AT+CMGF=1	//Set SMS message format as text mode
OK	
AT+CSCS="GSM"	//Set character set as GSM which is used by the TE
OK	
AT+CMGW="15021012496"	
> <This is a test from Quectel>	//Enter in text, **<ESC>** quits without sending
+CMGW: 6	
OK	

9.11. AT+CNMA   New Message Acknowledgement to UE/TE

AT+CNMA write and execute command confirms successful receipt of a new message (SMS-DELIVER or SMS-STATUS-REPORT) routed directly to the TE. If the UE does not receive acknowledgement within the required time (net-work timeout), then it will send a "RP-ERROR" message to the network. The UE will automatically disable rout to the TE by setting both **<mt>** and **<ds>** values of AT+CNMI to 0.

AT+CNMA New Message Acknowledgement to UE/TE	
Test Command **AT+CNMA=?**	Response **+CNMA: (list of supported <n>s)** **OK**
Execution Command	Response

AT+CNMA	OK
	ERROR
	If error is related to ME functionality:
	+CMS ERROR: <err>
Write Command **AT+CNMA=<n>**	Response
	OK
	ERROR
	If error is related to ME functionality:
	+CMS ERROR: <err>
Maximum Response Time	300ms
Reference 3GPP TS 27.005	

Parameter

<n>   Parameter required only for PDU mode
    0   Command operates similarly as in text mode
    1   Send positive (RP-ACK) acknowledgement to the network. Accepted only in PDU mode
    2   Send negative (RP-ERROR) acknowledgement to the network. Accepted only in PDU mode

---

NOTE

Execute and write command shall only be used when AT+CSMS parameter **<service>** equals to 1 (phase 2+) and an appropriate URC has been issued by the module, i.e.:
+CMT for **<mt>**=2 incoming message classes 0,1,3 and none;
+CMT for **<mt>**=3 incoming message classes 0 and 3;
+CDS for **<ds>**=1.

Example

AT+CSMS=1
OK
AT+CNMI=1,2,0,0,0
OK

+CMT: "+8615021012496",,"13/12/03,17:07:21+32",145,4,0,0,"+8613800551500",145,28
This is a test from Quectel.   //Short message is outputted directly when SMS is incoming
AT+CNMA   //Send ACK to the network
OK
AT+ CNMA

+CMS ERROR：340   //The second time returns error, it needs ACK only once

9.12. AT+CNMI   SMS Event Reporting Configuration

AT+CNMI write command selects the procedure, how the received new messages from the network are indicated to the TE when TE is active, e.g. DTR signal is ON. If TE is inactive (e.g. DTR signal is OFF), message receiving should be done as specified in 3GPP TS 23.038.

AT+CNMI SMS Event Reporting Configuration	
Test Command **AT+CNMI=?**	Response **+CNMI:** (list of supported **<mode>**s),(list of supported **<mt>**s),(list of supported **<bm>**s),(list of supported **<ds>**s),(list of supported **<bfr>**s) **OK**
Read Command **AT+CNMI?**	Response **+CNMI: <mode>,<mt>,<bm>,<ds>,<bfr>** **OK**
Write Command **AT+CNMI=<mode>[,<mt>[,<bm>[,<ds>[,<bfr>]]]]**	Response TA selects the procedure on how the received new messages from the network are indicated to the TE when TE is active, e.g. DTR signal is ON. If TE is inactive (e.g. DTR signal is OFF), receiving message should be done as specified in 3GPP TS 23.038. **OK** **ERROR** If error is related to ME functionality: **+CMS ERROR: <err>**
Maximum Response Time	300ms
Reference 3GPP TS 27.005	

Parameter

<mode>	0	Buffer unsolicited result codes in the TA. If TA result code buffer is full, indications can be buffered in some other place or the oldest indications may be discarded and replaced with the new received indications
	1	Discard indication and reject new received message unsolicited result codes

		when TA-TE link is reserved (e.g. in on-line data mode). Otherwise forward them directly to the TE
	2	Buffer unsolicited result codes in the TA when TA-TE link is reserved (e.g. in on-line data mode) and flush them to the TE after reservation. Otherwise forward them directly to the TE
\<mt\>		The rules for storing received SMs depend on its data coding scheme (refer to 3G PPTS 23.038), preferred memory storage (+CPMS) setting and the value is:
	0	No SMS-DELIVER indications are routed to the TE
	1	If SMS-DELIVER is stored into ME/TA, indication of the memory location is routed to the TE by using unsolicited result code: **+CMTI: \<mem\>,\<index\>**
	2	SMS-DELIVERs (except class 2) are routed directly to the TE using unsolicited result code: **+CMT: [\<alpha\>],\<length\>\<CR\>\<LF\>\<pdu\>** (PDU mode enabled) or **+CMT:\<oa\>,[\<alpha\>],\<scts\>[,\<tooa\>,\<fo\>,\<pid\>,\<dcs\>,\<sca\>,\<tosca\>, \<length\>]\<CR\>\<LF\>\<data\>** (Text mode enabled; about parameters in italics, refer to Command Show Text Mode Parameters **+CSDH**). Class 2 messages result in indication as defined in **\<mt\>**=1
	3	Class 3 SMS-DELIVERs are routed directly to TE by using unsolicited result codes defined in **\<mt\>**=2. Messages of other classes result in indication as defined in **\<mt\>**=1
\<bm\>		The rules for storing received CBMs depend on its data coding scheme (refer to 3 GPP TS 23.038), the setting of Select CBM Types (**+CSCB**) and the value is:
	0	No CBM indications are routed to the TE
	1	If CBM is stored into ME/TA, indication of the memory location is routed to the TE using unsolicited result code: **+CBMI: \<mem\>,\<index\>**
	2	New CBMs are routed directly to the TE using unsolicited result code: **+CBM: \<length\>\<CR\>\<LF\>\<pdu\>** (PDU mode) **+CBM: \<sn\>,\<mid\>,\<dcs\>,\<page\>,\<pages\>\<CR\>\<LF\>\<data\>** (text mode)
	3	Class 3 CBMs are routed directly to TE using unsolicited result codes defined in **\<bm\>**=2. If CBM storage is supported, messages of other classes result in indication as defined in **\<bm\>**=1.
\<ds\>	0	No SMS-STATUS-REPORTs are routed to the TE SMS-STATUS-REPORTs are routed to the TE using unsolicited result code: **+CDS: \<length\>\<CR\>\<LF\>\<pdu\>** (PDU mode) **+CDS: \<fo\>,\<mr\>,[\<ra\>],[\<tora\>],\<scts\>,,\<st\>** (text mode) If SMS-STATUS-REPORT is stored into ME/TA, indication of the memory location is routed to the TE using unsolicited result code: **+CDSI:\<mem\>,\<index\>**
\<bfr\>	0	TA buffer of unsolicited result codes defined within this command is flushed to the TE when **\<mode\>** 1...2 is entered ("**OK**" response shall be given before flushing the codes)
	1	TA buffer of unsolicited result codes defined within this command is cleared when **\<mode\>** 1...2 is entered

NOTE

Unsolicited result code:

+CMTI: <mem>,<index>	Indicates that new message has been received
+CMT: [<alpha>],<length><CR><LF><pdu>	Short message is outputted directly
+CBM: <length><CR><LF><pdu>	Cell broadcast message is outputted directly
+CBMI: <mem>,<index>	Cell broadcast message is stored and routed to the TE

Example

AT+CMGF=1	//Set SMS message format as text mode
OK	
AT+CSCS="GSM"	//Set character set as GSM which is used by the TE
OK	
AT+CNMI=1,2,0,1,0	//Set SMS-DELIVERs are routed directly to the TE
OK	
+CMT: "+8615021012496",,"2014/03/18 17:07:21+32"	
This is a test from Quectel.	//Short message is outputted directly when SMS is incoming.

9.13. AT+CSCB   Select Cell Broadcast Message Types

AT+CSCB write command selects which types of CBMs are to be received by the ME. The command writes the parameters in non-volatile memory.

AT+CSCB Select Cell Broadcast Message Types	
Test Command **AT+CSCB=?**	Response It returns supported modes as a compound value. **+CSCB:** (list of supported **<mode>**s) **OK**
Read Command **AT+CSCB?**	Response **+CSCB: <mode>,<mids>,<dcss>** **OK**
Write Command **AT+CSCB=<mode>[,mids>[,<dcss>]]**	Response TA selects which types of CBMs are to be received by the ME. **OK** If error is related to ME functionality: **+CMS ERROR: <err>**

Maximum Response Time	300ms
Reference 3GPP TS 27.005	

Parameter

\<mode\>	0	Message types specified in **\<mids\>** and **\<dcss\>** are accepted
	1	Message types specified in **\<mids\>** and **\<dcss\>** are not accepted
\<mids\>		String type, all different possible combinations of CBM message identifiers (refer to **\<mid\>**) (default is empty string), e.g. "0,1,5,320-478,922"
\<dcss\>		String type, all different possible combinations of CBM data coding schemes (refer to **\<dcs\>**) (default is empty string), e.g. "0-3,5"

9.14. AT+CSDH   Show SMS Text Mode Parameters

AT+CSDH write command controls whether or not detailed header information is shown in text mode result codes.

AT+CSDH Show SMS Text Mode Parameters	
Test Command **AT+CSDH=?**	Response **+CSDH:** (list of supported **\<show\>**s) **OK**
Read Command **AT+CSDH?**	Response **+CSDH: \<show\>** **OK**
Write Command **AT+CSDH=\<show\>**	Response **OK** **ERROR**
Maximum Response Time	300ms
Reference 3GPP TS 27.005	

Parameter

\<show\>	0	Do not show header values defined in commands **+CSCA** and **+CSMP** (**\<sca\>**, **\<tosca\>**, **\<fo\>**, **\<vp\>**, **\<pid\>** and **\<dcs\>**) nor **\<length\>**, **\<toda\>** or **\<tooa\>** in **+CM**T, **+CMGL**, **+CMGR** result codes for SMS-DELIVERs and SMS-SUBMITs in

text mode

| 1 | Show the values in result codes |

Example

```
AT+CSDH=0
OK
AT+CMGR=2
+CMGR: "STO UNSENT","",
<This is a test from Quectel>

OK
AT+CSDH=1
OK
AT+CMGR=2
+CMGR: "STO UNSENT","",,128,17,0,0,143,"+8613800551500",145,18
<This is a test from Quectel>

OK
```

9.15. AT+CSMP   Set SMS Text Mode Parameters

AT+CSMP is used to set values for additional parameters needed when a short message is sent to the network or placed in a storage in text mode.

AT+CSMP Set SMS Text Mode Parameters	
Test Command **AT+CSMP=?**	Response **OK**
Read Command **AT+CSMP?**	Response **+CSMP: <fo>,<vp>,<pid>,<dcs>** **OK**
Write Command **AT+CSMP=[<fo>[,<vp>[,<pid>[,<dcs>]]]]**	Response TA selects values for additional parameters needed when SM is sent to the network or placed in a storage when text mode is selected (**+CMGF=1**). It is possible to set the validity period starting from when the SM is received by the SMSC (**<vp>** is in range 0... 255) or define the absolute time of the validity period termination (**<vp>** is a string). **OK**

Maximum Response Time	300ms
Reference 3GPP TS 27.005	

Parameter

\<fo\>	First octet. Depending on the command or result code: First octet of 3GPP TS 23.040 SMS-DELIVER, SMS-SUBMIT (default17), SMS-STATUS-REPORT SMS-COMMAND in integer format. If a valid value has been entered once, parameter can be omitted
\<vp\>	Validity period. Depending on SMS-SUBMIT **\<fo\>** setting: 3GPP TS 23.040 TP-Validity-Period either in integer format or in time-string format (refer to **\<dt\>**)
\<pid\>	Protocol identifier. 3GPP TS 23.040 TP-Protocol-Identifier in integer format (default 0).
\<dcs\>	Data coding scheme. Depending on the command or result code: 3GPP TS 23.038 SMS Data Coding Scheme (default 0), or Cell Broadcast Data Coding Scheme in integer format

9.16. AT+QCMGS   Send Concatenated Messages

AT+QCMGS is used to send concatenated massages. When sending a concatenated message, which is different from AT+CMGS, each segment of the concatenated message must be identified by the additional parameters: **\<uid\>**, **\<msg_seg\>** and **\<msg_total\>**. When sending all segments of the message one by one, AT+QCMGS must be executed multiple times (equal to **\<msg_total\>**) for each segment. This command is only used in text mode (AT+CMGF=1).

AT+QCMGS Send Concatenated Messages	
Test Command **AT+QCMGS=?**	Response **OK**
Write Command If text mode (**+CMGF=1**): **AT+QCMGS=\<da\>[,\<toda\>][,\<uid\>,\<msg_seg\>,\<msg_total\>]**\<CR\> **text is entered** \<ctrl-Z/ESC\>	Response If text mode (**+CMGF=1**) and sent successfully: **+QCMGS: \<mr\>** **OK** **ERROR** If error is related to ME functionality: **+CMS ERROR: \<err\>**
Maximum Response Time	120s, determined by network.

Parameter

<uid>	Message identification in the user data header (UDH). Range from 0 to 255. This parameter is defined and inputted by the user. All segments of a same concatenated message must have the same **<uid>**. Different concatenated messages should have different **<uid>**.
<msg_seg>	Sequence number of a concatenated message. Range from 0 to 7. **<msg_seg>**=0 means: ignore the value and regarded it as a non-concatenated message.
<msg_total>	The total number of the segments of one concatenated message. Range from 0 to 7. **<msg_total>**=0 or 1 means: ignore the value and regard it as a non-concatenated message.
<da>,<toda>,<mr>	Please refer to AT+CMGS

NOTES

1. For concatenated messages, the maximum length will be reduced by the length of the user data header (UDH). 3GPP TS 23.040 defines two kinds of UDH length: 6 bytes and 7 bytes, so the two kinds of **<uid>** are 8 bit (6 bytes) and 16 bit (7 bytes). AT+QCMGS uses 8 bit **<uid>**.
   - In the case of GSM 7 bit default alphabet data coding scheme, the maximum length of each segment of a concatenated message is (140 octets - 6)*8/7=153 characters.
   - In the case of 16 bit UCS2 data coding scheme, the maximum length of each segment is (140-6)/2=67 characters.
   - In the case of 8-bit data coding scheme, the maximum length of each segment is 140-6=134.
2. **<mr>**, Message-Reference field gives an integer representation of a reference number of the SMS-SUBMIT or SMS-COMMAND submitted to the SC by the MS, and it is used to confirm the SMS-DELIVER received from SC duplicate or not. **<uid>**, the field of UDH, is message identification of the concatenated SMS, which is different from **<mr>**. Each segment in a concatenated message should have the same **<uid>**, but **<mr>** must be incremented for each segment of a concatenated message.
3. AT+QCMGS does not support to send message in PDU mode (AT+CMGF=0).

Example

AT+CMGF=1	//Set SMS message format as text mode
OK	
AT+CSCS="GSM"	//Set character set as GSM which is used by the TE
OK	
AT+QCMGS="15056913384",120,1,2 <CR>	//Input 120 for **<uid>**, send the first segment of the concatenated SMS
>ABCD<Ctrl-Z>	
+QCMGS: 190	
OK	

AT+QCMGS= "15056913384",120,2,2 <CR>   //Send the second segment of the concatenated SMS.
>EFGH<Ctrl-Z>
+QCMGS: 191

OK

9.17. AT+QCMGR   Read Concatenated Messages

The function of AT+QCMGR is similar to AT+CMGR, except that the message to be read is a segment of concatenated messages, parameters: **<uid>,<msg_seg>** and **<msg_total>** would be shown in the result. You should concatenate several segments to a whole concatenated message according to these three parameters. Similar to AT+QCMGS, and AT+QCMGR is only used in text mode (AT+CMGF=1).

AT+QCMGR Read Concatenated Messages	
Test Command **AT+QCMGR=?**	Response **OK**
Write Command **AT+QCMGR=<index>**	Response If text mode (**+CMGF=1**) and command is executed successfully: For SMS-DELIVER: **+QCMGR:** **<stat>,<oa>,[<alpha>],<scts>[,<tooa>,<fo>,<pid>,<dcs>,<sca>,<tosca>,<length>][,<uid>,<msg_seg>,<msg_total>]<CR><LF><data>** **OK** For SMS-SUBMIT: **+QCMGR:** **<stat>,<da>,[<alpha>][,<toda>,<fo>,<pid>,<dcs>,[<vp>],<sca>,<tosca>,<length>][,<uid>,<msg_seg>,<msg_total>]<CR><LF><data>** **OK** For SMS-STATUS-REPORTs: **+QCMGR:** **<stat>,<fo>,<mr>,[<ra>],[<tora>],<scts>,<dt>,<st>** **OK** For SMS-COMMANDs: **+QCMGR:** **<stat>,<fo>,<ct>[,<pid>,[<mn>],[<da>],[<toda>],<length><CR><LF><cdata>]**

	OK
	Else, if error is related to ME functionality: **+CMS ERROR: \<err\>**
Maximum Response Time	Depends on the length of message content.

Parameter

\<uid\>	Message identification in the user data header(UDH). Range from 0 to 65535 (see NOTES). All segments of a same concatenated message have same **\<uid\>**. Different concatenated messages should have different **\<uid\>**.
\<msg_seg\>	Sequence number of a concatenated message. Range from 1 to 7.
\<msg_total\>	The total number of the segments of one concatenated message. Range is from 2 to 7.
	Other parameters please refer to **AT+CMGR**

NOTES

1. The **\<uid\>** in **AT+QCMGR** is different from the **\<uid\>** in AT+QCMGS. It is possible that UE receives concatenated messages with 8 bits or 16 bits **\<uid\>**. So its maximal value is 255 with 8 bits and 65535 with 16 bits.
2. If the message to be read is not a concatenated message, **\<uid\>**, **\<msg_seg\>** and **\<msg_total\>** would not be showed in the result.

Example

```
+CMTI: "SM",3          //The first message of a concatenated message comes

+CMTI: "SM",4          //The second message of a concatenated message comes

AT+QCMGR= 3            //Read the first segment of the concatenated message
+QCMGR: "REC UNREAD","+8615056913384",,"13/07/30,14:44:37+32",120,1,2
ABCD

OK
AT+QCMGR= 4            //Read the second segment of the concatenated message
+QCMGR: "REC UNREAD","+8615056913384",,"13/07/30,14:44:37+32",120,2,2
EFGH

OK
```

10 Packet Domain Commands

10.1. AT+CGATT   Attachment or Detachment of PS

The AT+CGATT write command is used to attach the MT to, or detach the MT from the packet domain service. After the command has completed, the MT remains in V.25ter command state. If the MT is already in the requested state, the command is ignored and the **OK** response will be returned. If the requested state cannot be achieved, an **ERROR** or **+CME ERROR** response is returned.

AT+CGATT Attachment or Detachment of PS	
Test Command **AT+CGATT=?**	Response **+CGATT:** (list of supported **<state>**s) **OK**
Read Command **AT+CGATT?**	Response **+CGATT: <state>** **OK**
Write Command **AT+CGATT=<state>**	Response **OK** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	75s, determined by network.
Reference 3GPP TS 27.007	

Parameter

<state>	Indicates the state of PS attachment
	0 Detached
	1 Attached
	Other values are reserved and will result in an **ERROR** response to the Write Command

Example

AT+CGATT=1	//Attach to PS service
OK	
AT+CGATT=0	//Detach from PS service
OK	
AT+CGATT?	//Query the current PS service state
+CGATT: 0	
OK	

10.2. AT+CGDCONT   Define PDP Context

AT+CGDCONT specifies PDP context parameters for a specific context **<cid>**. A special form of the write command (AT+CGDCONT=**<cid>**) causes the values for context **<cid>** to become undefined. It is not allowed to change the definition of an already activated context.

The AT+CGDCONT read command returns the current settings for each defined PDP context.

AT+CGDCONT Define PDP Context	
Test Command **AT+CGDCONT=?**	Response **+CGDCONT:** (range of supported **<cid>**s), **<PDP_type>**, **<APN>**, **<PDP_addr>**, (list of supported **<data_comp>**s), (list of supported **<head_comp>**s) **OK**
Read Command **AT+CGDCONT?**	Response **[+CGDCONT:** **<cid>,<PDP_type>,<APN>,<PDP_addr>,<data_comp>,<head_comp>]** **[…]** **OK**
Write Command **AT+CGDCONT=<cid>[,<PDP_type>[,<APN>[,<PDP_addr>[,<data_comp>[,<head_comp>]]]]]**	Response **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<cid>	PDP context identifier, a numeric parameter which specifies a particular PDP context definition. The parameter is local to the TE-MT interface and is used in other PDP context-related commands. The range of permitted values (minimum value=1) is returned by the test form of the command
<PDP_type>	Packet data protocol type, a string parameter which specifies the type of packet data protocol "IP" IPV4 "IPV6" "IPV4V6"
<APN>	Access point name, a string parameter that is a logical name that is used to select the GGSN or the external packet data network. If the value is null or omitted, then the subscription value will be requested
<PDP_addr>	A string parameter identifies the MT in the address space applicable to the PDP. If the value is null of omitted, then a value may be provided by the TE during the PDP startup procedure or, failing that, a dynamic address will be requested. The allocated address may be read using the **+CGPADDR** command
<data_comp>	A numeric parameter that controls PDP data compression (applicable for SNDCP only) (refer to 3GPP TS 44.065) 0 Off (default if value is omitted) 1 On (manufacturer preferred compression) 2 V.42bis
<head_comp>	A numeric parameter that controls PDP header compression (refer to 3GPP TS 44.065 and 3GPP TS 25.323) 0 Off 1 On 2 RFC1144 3 RFC2507 4 RFC3095

10.3. AT+CGQREQ   Quality of Service Profile (Requested)

AT+CGQREQ allows the TE to specify a quality of service profile that is used when the MT activates a PDP context.

The write command specifies a profile for the context **<cid>** A special form of the write command, AT+CGQREQ=**<cid>** causes the requested profile for context number **<cid>** to become undefined. The read command returns the current settings for each defined context. Details can be found in 3GPP TS 23.107 and all of parameters save in NV automatically.

AT+CGQREQ	Quality of Service Profile (Requested)
Test Command **AT+CGQREQ=?**	Response **+CGQREQ: <PDP_type>**, (list of supported **<precedence>**s), (list of supported **<delay>**s), (list of supported **<reliability>**s), (list of supported **<peak>**s), (list of supported **<mean>**s) **OK**
Read Command **AT+CGQREQ?**	Response **[+CGQREQ:** **<cid>,<precedence>,<delay>,<reliability>,<peak>,<mean>]** **[+CGQREQ:** **<cid>,<precedence>,<delay>,<reliability>,<peak>,<mean>]** **[…]** **OK**
Write Command **AT+CGQREQ=<cid>[,<precedence>[,<delay>[,<reliability>[,<peak>[,<mean>]]]]]**	Response **OK** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<cid>	A numeric parameter which specifies a particular PDP context definition (see **+CGDCONT** command)
<precedence>	A numeric parameter which specifies the precedence class
	<u>0</u>　　　Network subscribed value
	1　　　High priority. Service commitments shall be maintained ahead of precedence classes 2 and 3
	2　　　Normal priority. Service commitments shall be maintained ahead of precedence class 3
	3　　　Low priority. Service commitments shall be maintained
<delay>	A numeric parameter which specifies the delay class. This parameter defines the end-to-end transfer delay incurred in the transmission of SDUs through the network.

	For the detail please refer to Table 5: Delay Class
	<u>0</u> Network subscribed value
<reliability>	A numeric parameter which specifies the reliability class
	<u>0</u> Network subscribed value
	1 Non real-time traffic, error-sensitive application that cannot cope with data loss
	2 Non real-time traffic, error-sensitive application that can cope with infrequent data loss
	3 Non real-time traffic, error-sensitive application that can cope with data loss, GMM/SM, and SMS
	4 Real-time traffic, error-sensitive application that can cope with data loss
	5 Real-time traffic, error non-sensitive application that can cope with data loss
<peak>	A numeric parameter which specifies the peak throughput class, in octets per second.
	<u>0</u> Network subscribed value
	1 Up to 1 000 (8 kbit/s)
	2 Up to 2 000 (16 kbit/s)
	3 Up to 4 000 (32 kbit/s)
	4 Up to 8 000 (64 kbit/s)
	5 Up to 16 000 (128 kbit/s)
	6 Up to 32 000 (256 kbit/s)
	7 Up to 64 000 (512 kbit/s)
	8 Up to 128 000 (1024 kbit/s)
	9 Up to 256 000 (2048 kbit/s)
<mean>	A numeric parameter which specifies the mean throughput class, in octets per hour
	<u>0</u> Network subscribed value
	1 100 (~0.22 bit/s)
	2 200 (~0.44 bit/s)
	3 500 (~1.11 bit/s)
	4 1 000 (~2.2 bit/s)
	5 2 000 (~4.4 bit/s)
	6 5 000 (~11.1 bit/s)
	7 10 000 (~22 bit/s)
	8 20 000 (~44 bit/s)
	9 50 000 (~111 bit/s)
	10 100 000 (~0.22 kbit/s)
	11 200 000 (~0.44 kbit/s)
	12 500 000 (~1.11 kbit/s)
	13 1000 000 (~2.2 kbit/s)
	14 2 000 000 (~4.4 kbit/s)
	15 5 000 000 (~11.1 kbit/s)
	16 10 000 000 (~22 kbit/s)
	17 20 000 000 (~44 kbit/s)
	18 50 000 000 (~111 kbit/s)
	31 Best effort

Table 4: Delay Class

SDU Size	Delay Class	Mean Transfer Delay	95 Percentile
128 Octets	1 (Predictive)	<0.5	<1.5
	2 (Predictive)	<5	<25
	3 (Predictive)	<50	<250
	4 (Best Effort)	Unspecified	-
1024 Octets	1 (Predictive)	<0.5	<1.5
	2 (Predictive)	<5	<25
	3 (Predictive)	<50	<250
	4 (Best Effort)	Unspecified	-

10.4. AT+CGQMIN   Quality of Service Profile (Minimum Acceptable)

AT+CGQMIN allows the TE to specify a minimum acceptable profile which is checked by the MT against the negotiated profile when the PDP context is activated. The write command specifies a profile for the context identified by the context identification parameter **<cid>**.

A special form of the write command, AT+CGQMIN=**<cid>** causes the minimum acceptable profile for context number **<cid>** to become undefined. In this case no check is made against the negotiated profile. The read command returns the current settings for each defined context. Details can be found in 3GPP TS 23.107 and all of parameters save in NV automatically.

AT+CGQMIN Quality of Service Profile (Minimum Acceptable)	
Test Command **AT+CGQMIN=?**	Response **+CGQMIN: <PDP_type>,** (list of supported **<precedence>**s), (list of supported **<delay>**s), (list of supported **<reliability>**s), (list of supported **<peak>**s), (list of supported **<mean>**s) **OK**
Read Command **AT+CGQMIN?**	Response **[+CGQMIN:**

	<cid>,<precedence>,<delay>,<reliability>,<peak>,<mean>] [+CGQMIN: <cid>,<precedence>,<delay>,<reliability>,<peak>,<mean>] […] OK
Write Command **AT+CGQMIN=<cid>[,<precedence>[,<delay>[,<reliability>[,<peak>[,<mean>]]]]]**	Response **OK** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<cid>	A numeric parameter which specifies a particular PDP context definition (see **+CGDCONT** command)
<precedence>	A numeric parameter which specifies the precedence class
	0 Network subscribed value
	1 High priority Service commitments shall be maintained ahead of precedence classes 2 and 3
	2 Normal priority. Service commitments shall be maintained ahead of precedence class 3
	3 Low priority. Service commitments shall be maintained
<delay>	A numeric parameter which specifies the delay class. This parameter defines the end-to-end transfer delay incurred in the transmission of SDUs through the network For the detail please refer to Table 4: Delay Class
	0 Network subscribed value
<reliability>	A numeric parameter which specifies the reliability class
	0 Network subscribed value
	1 Non real-time traffic, error-sensitive application that cannot cope with data loss
	2 Non real-time traffic, error-sensitive application that can cope with infrequent data loss
	3 Non real-time traffic, error-sensitive application that can cope with data loss, GMM/SM, and SMS
	4 Real-time traffic, error-sensitive application that can cope with data loss
	5 Real-time traffic, error non-sensitive application that can cope with data

	loss	
<peak>	A numeric parameter which specifies the peak throughput class, in octets per second	
	0	Network subscribed value
	1	Up to 1 000 (8 kbit/s)
	2	Up to 2 000 (16 kbit/s)
	3	Up to 4 000 (32 kbit/s)
	4	Up to 8 000 (64 kbit/s)
	5	Up to 16 000 (128 kbit/s)
	6	Up to 32 000 (256 kbit/s)
	7	Up to 64 000 (512 kbit/s)
	8	Up to 128 000 (1024 kbit/s)
	9	Up to 256 000 (2048 kbit/s)
<mean>	A numeric parameter which specifies the mean throughput class, in octets per hour	
	0	Network subscribed value
	1	100 (~0.22 bit/s)
	2	200 (~0.44 bit/s)
	3	500 (~1.11 bit/s)
	4	1 000 (~2.2 bit/s)
	5	2 000 (~4.4 bit/s)
	6	5 000 (~11.1 bit/s)
	7	10 000 (~22 bit/s)
	8	20 000 (~44 bit/s)
	9	50 000 (~111 bit/s)
	10	100 000 (~0.22 kbit/s)
	11	200 000 (~0.44 kbit/s)
	12	500 000 (~1.11 kbit/s)
	13	1000 000 (~2.2 kbit/s)
	14	2 000 000 (~4.4 kbit/s)
	15	5 000 000 (~11.1 kbit/s)
	16	10 000 000 (~22 kbit/s)
	17	20 000 000 (~44 kbit/s)
	18	50 000 000 (~111 kbit/s)
	31	Best effort

10.5. AT+CGEQREQ   3G Quality of Service Profile (Requested)

AT+CGEQREQ allows the TE to specify a UMTS Quality of Service Profile that is used when the MT activates a PDP context. Details can be found in 3GPP TS 23.107 and all of parameters saved in NV automatically.

AT+CGEQREQ   3G Quality of Service Profile (Requested)

Test Command	Response
AT+CGEQREQ=?	**+CGEQREQ: <PDP_type>**,
	(list of supported **<Traffic class>**s),
	(list of supported **<Maximum bitrate UL>**s),
	(list of supported **<Maximum bitrate DL>**s),
	(list of supported **<Guaranteed bitrate UL>**s),
	(list of supported **<Guaranteed bitrate DL>**s),
	(list of supported **<Delivery order>**s),
	(list of supported **<Maximum SDU size>**s),
	(list of supported **<SDU error ratio>**s),
	(list of supported **<Residual bit error ratio>**s),
	(list of supported **<Delivery of erroneous SDUs>**s),
	(list of supported **<Transfer delay>**s),
	(list of supported **<Traffic handling priority>**s),
	(list of supported **<Source statistics descriptor>**s),
	(list of supported **<Signalling indication>**s)
	OK
Read Command	Response
AT+CGEQREQ?	**[+CGEQREQ: <cid>,**
	<Traffic class>,
	<Maximum bitrate UL>,
	<Maximum bitrate DL>,

	<Guaranteed bitrate DL>,
	<Delivery order>,
	<Maximum SDU size>,
	<SDU error ratio>,
	<Residual bit error ratio>,
	<Delivery of erroneous SDUs>,
	<Transfer delay>,
	<Traffic handling priority>,
	<Source statistics descriptor>,
	<Signalling indication>]
	[...]
	OK
Write Command	Response
AT+CGEQREQ=[<cid>[,<Traffic class>[,<Maximum bitrate UL> [,<Maximum bitrate DL> [,<Guaranteed bitrate UL>	**OK**
	ERROR
	If error is related to ME functionality:

[,<Guaranteed bitrate DL>	**+CME ERROR: <err>**
[,<Delivery order>	
[,<Maximum SDU size>	
[,<SDU error ratio>	
[,<Residual bit error ratio>	
[,<Delivery of erroneous SDUs>	
[,<Transfer delay>	
[,<Traffic handling priority>	
[,<Source statistics descriptor>	
[,<Signalling indication>]]]]]]]]]]]]]]]	
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<cid>	PDP context identifier, a numeric parameter which specifies a particular PDP context definition. The parameter is local to the TE-MT interface and is used in other PDP context-related commands. The range of permitted values (minimum value=1) is returned by the test form of the command
<Traffic class>	Integer type, indicates the type of application for which the UMTS bearer service is optimized (refer to 3GPP TS 24.008 subclause 10.5.6.5). If the Traffic class is specified as conversational or streaming, then the Guaranteed and Maximum bitrate parameters should also be provided
	0 Conversational
	1 Streaming
	2 Interactive
	3 Background
	<u>4</u> Subscribed value
<Maximum bitrate UL>	Integer type, indicates the maximum number of kbits/s delivered to UMTS (up-link traffic) at a SAP. As an example a bit rate of 32kbit/s would be specified as '32' (e.g. AT+CGEQREQ=…,32, …)
	<u>0</u> Subscribed value
	1~8640
<Maximum bitrate DL>	Integer type, indicates the maximum number of kbits/s delivered by UMTS (down-link traffic) at a SAP. As an example a bitrate of 32kbit/s would be specified as '32' (e.g. AT+CGEQREQ=…,32, …)
	<u>0</u> Subscribed value
	1~16000
<Guaranteed bitrate UL>	Integer type, indicates the guaranteed number of kbits/s delivered to UMTS (up-link traffic) at a SAP (provided that there is data to deliver). As an example a bitrate of 32kbit/s would be specified as '32' (e.g. T+CGEQREQ=…,32, …)

	0	Subscribed value
	1~8640	
\<Guaranteed bitrate DL\>	Integer type, indicates the guaranteed number of kbits/s delivered by UMTS (down-link traffic) at a SAP (provided that there is data to deliver). As an example a bitrate of 32kbit/s would be specified as '32' (e.g. AT+CGEQREQ=…,32, …)	
	0	Subscribed value
	1~16000	
\<Delivery order\>	Integer type, indicates whether the UMTS bearer shall provide in-sequence SDU delivery or not (refer to 3GPP TS 24.008 subclause 10.5.6.5)	
	0	No
	1	Yes
	2	Subscribed value
\<Maximum SDU size\>	Integer type, (1,2,3,…) indicates the maximum allowed SDU size in octets. If the parameter is set to '0' the subscribed value will be requested (refer to 3GPP TS 24.008 subclause 10.5.6.5)	
	0	Subscribed value
	10~1500	(value needs to be divisible by 10 without remainder)
	1502	
	1510	
	1520	
\<SDU error ratio\>	String type, indicates the target value for the fraction of SDUs lost or detected as erroneous. SDU error ratio is defined only for conforming traffic. The value is specified as 'mEe'. As an example a target SDU error ratio of $5*10^{-3}$ would be specified as "5E3" (e.g. AT+CGEQREQ=…,"5E3",…)	
	"0E0"	Subscribed value
	"1E2"	
	"7E3"	
	"1E3"	
	"1E4"	
	"1E5"	
	"1E6"	
	"1E1"	
\<Residual bit error ratio\>	String type, indicates the target value for the undetected bit error ratio in the delivered SDUs. If no error detection is requested, Residual bit error ratio indicates the bit error ratio in the delivered SDUs. The value is specified as "mEe". As an example a target residual bit error ratio of 5•10-3 would be specified as "5E3" (e.g. AT+CGEQREQ=…,"5E3",…)	
	"0E0"	Subscribed value
	"5E2"	
	"1E2"	
	"5E3"	
	"4E3"	
	"1E3"	

	"1E4"
	"1E5"
	"1E6"
	"6E8"
\<Delivery of erroneous SDUs>	Integer type, indicates whether SDUs detected as erroneous shall be delivered or not (refer to 3GPP TS 24.008 [8] subclause 10.5.6.5)
	0 No
	1 Yes
	2 No detect
	<u>3</u> Subscribed value
\<Transfer delay>	Integer type, (0,1,2,…) indicates the targeted time between request to transfer an SDU at one SAP to its delivery at the other SAP, in milliseconds. If the parameter is set to '0' the subscribed value will be requested (refer to 3GPP TS 24.008 subclause 10.5.6.5)
	<u>0</u> Subscribed value
	10~150 (value needs to be divisible by 10 without remainder)
	200~950 (value needs to be divisible by 50 without remainder)
	1000~4000 (value needs to be divisible by 100 without remainder)
\<Traffic handling priority>	Integer type, (1,2,3,…) specifies the relative importance for handling of all SDUs belonging to the UMTS bearer compared to the SDUs of other bearers. If the parameter is set to '0' the subscribed value will be requested (refer to 3GPP TS 24.008 [8] subclause 10.5.6.5)
	<u>0</u> Subscribed

\<Source Statistics Descriptor>	Integer type, specifies characteristics of the source of the submitted SDUs for a PDP context
	<u>0</u> Characteristics of SDUs is unknown
	1 Characteristics of SDUs corresponds to a speech source
\<Signalling Indication>	Integer type, indicates signaling content of submitted SDUs for a PDP context
	<u>0</u> PDP context is not optimized for signaling
	1 PDP context is optimized for signaling **\<PDP_type>**

10.6. AT+CGEQMIN　3G Quality of Service Profile (Minimum Acceptable)

AT+CGEQMIN allows the TE to specify a minimum acceptable profile, which is checked by the MT against the negotiated profile returned in the PDP context establishment and PDP context modification procedures. Details can be found in 3GPP TS 23.107 and all of parameters save in NV automatically.

AT+CEGQMIN   3G Quality of Service Profile (Minimum Acceptable)

Test Command AT+CGEQMIN=?	Response **+CGEQMIN: <PDP_type>,** (list of supported **<Traffic class>**s), (list of supported **<Maximum bitrate UL>**s), (list of supported **<Maximum bitrate DL>**s), (list of supported **<Guaranteed bitrate UL>**s), (list of supported **<Guaranteed bitrate DL>**s), (list of supported **<Delivery order>**s), (list of supported **<Maximum SDU size>**s), (list of supported **<SDU error ratio>**s), (list of supported **<Residual bit error ratio>**s), (list of supported **<Delivery of erroneous SDUs>**s), (list of supported **<Transfer delay>**s), (list of supported **<Traffic handling priority>**s), (list of supported **<Source statistics descriptor>**s), (list of supported **<Signalling indication>**s) **OK**
Read Command AT+CGEQMIN?	Response **[+CGEQMIN: <cid>,** **<Traffic class>,** **<Maximum bitrate UL>,** **<Maximum bitrate DL>,** **<Guaranteed bitrate UL>,** **<Guaranteed bitrate DL>,** **<Delivery order>,** **<Maximum SDU size>,** **<SDU error ratio>,** **<Residual bit error ratio>,** **<Delivery of erroneous SDUs>,** **<Transfer delay>,** **<Traffic handling priority>,** **<Source statistics descriptor>,** **<Signalling indication>]** **[…]** **OK**
Write Command **AT+CGEQMIN=[<cid>[,<Traffic class>** **[,<Maximum bitrate UL>** **[,<Maximum bitrate DL>**	Response **OK** If error is related to ME functionality:

[,<Guaranteed bitrate UL>	+CME ERROR: <err>
[,<Guaranteed bitrate DL>	
[,<Delivery order>	
[,<Maximum SDU size>	
[,<SDU error ratio>	
[,<Residual bit error ratio>	
[,<Delivery of erroneous SDUs>	
[,<Transfer delay>	
[,<Traffic handling priority>	
[,<Source statistics descriptor>	
[,<Signalling indication>]]]]]]]]]]]]]]	
Maximum Response Time	300ms
Reference	
3GPP TS 27.007	

Parameter

<cid>	PDP context identifier, a numeric parameter which specifies a particular PDP context definition. The parameter is local to the TE-MT interface and is used in other PDP context-related commands. The range of permitted values (minimum value=1) is returned by the test form of the command
<Traffic class>	Integer type, indicates the type of application for which the UMTS bearer service is optimized (refer to 3GPP TS 24.008 subclause 10.5.6.5). If the Traffic class is specified as conversational or streaming, then the Guaranteed and Maximum bitrate parameters should also be provided

    <u>0</u>   Conversational
    1   Streaming
    2   Interactive
    3   Background
    4   Subscribed value

<Maximum bitrate UL>	Integer type, indicates the maximum number of kbits/s delivered to UMTS (up-link traffic) at a SAP. As an example a bitrate of 32kbit/s would be specified as '32' (e.g. AT+CGEQREQ=…,32, …)

    <u>0</u>   Subscribed value
    1~8640

<Maximum bitrate DL>	Integer type, indicates the maximum number of kbits/s delivered by UMTS (down-link traffic) at a SAP. As an example a bitrate of 32kbit/s would be specified as '32' (e.g. AT+CGEQREQ=…,32, …)

    <u>0</u>   Subscribed value
    1~16000

<Guaranteed bitrate UL>	Integer type, indicates the guaranteed number of kbits/s delivered to UMTS (up-link traffic) at a SAP (provided that there is data to deliver). As an example a bitrate of 32kbit/s would be specified as '32' (e.g.

AT+CGEQREQ=…,32, …)

<u>0</u>   Subscribed value

1~8640

\<Guaranteed bitrate DL\>	Integer type, indicates the guaranteed number of kbits/s delivered by UMTS (down-link traffic) at a SAP (provided that there is data to deliver). As an example a bitrate of 32kbit/s would be specified as '32' (e.g. AT+CGEQREQ=…,32, …)

<u>0</u>   Subscribed value

1~16000

\<Delivery order\>	Integer type, indicates whether the UMTS bearer shall provide in-sequence SDU delivery or not (refer 3GPP TS 24.008 subclause 10.5.6.5)

<u>0</u>   No

1   Yes

2   Subscribed value

\<Maximum SDU size\>	Integer type, (1,2,3,…) indicates the maximum allowed SDU size in octets. If the parameter is set to '0' the subscribed value will be requested (refer to 3GPP TS 24.008 subclause 10.5.6.5)

<u>0</u>   Subscribed value

10~1500   (value needs to be divisible by 10 without remainder)

1502

1510

1520

\<SDU error ratio\>	String type, indicates the target value for the fraction of SDUs lost or detected as erroneous. SDU error ratio is defined only for conforming traffic. The value is specified as 'mEe'. As an example a target SDU error ratio of $5*10^{-3}$ would be specified as "5E3" (e.g. AT+CGEQREQ=…,"5E3",…)

<u>"0E0"</u>   Subscribed value

"1E2"

"7E3"

"1E3"

"1E4"

"1E5"

"1E6"

"1E1"

\<Residual bit error ratio\>	String type, indicates the target value for the undetected bit error ratio in the delivered SDUs. If no error detection is requested, Residual bit error ratio indicates the bit error ratio in the delivered SDUs. The value is specified as "mEe". As an example a target residual bit error ratio of 5•10-3 would be specified as "5E3" (e.g. AT+CGEQREQ=…,"5E3",…)

<u>"0E0"</u>   Subscribed value

"5E2"

"1E2"

"5E3"

"4E3"

"1E3"
"1E4"
"1E5"
"1E6"
"6E8"

\<Delivery of erroneous SDUs\>	Integer type, indicates whether SDUs detected as erroneous shall be delivered or not (refer to 3GPP TS 24.008 [8] subclause 10.5.6.5)
	<u>0</u> No
	1 Yes
	2 No detect
	3 Subscribed value
\<Transfer delay\>	Integer type, (0,1,2,…) indicates the targeted time between request to transfer an SDU at one SAP to its delivery at the other SAP, in milliseconds. If the parameter is set to '0' the subscribed value will be requested (refer to 3GPP TS 24.008 subclause 10.5.6.5)
	<u>0</u> Subscribed value
	10~150 (value needs to be divisible by 10 without remainder)
	200~950 (value needs to be divisible by 50 without remainder)
	1000~4000 (value needs to be divisible by 100 without remainder)
\<Traffic handling priority\>	Integer type, (1,2,3,…) specifies the relative importance for handling of all SDUs belonging to the UMTS bearer compared to the SDUs of other bearers. If the parameter is set to '0' the subscribed value will be requested (refer to 3GPP TS 24.008 [8] subclause 10.5.6.5)
	<u>0</u> Subscribed
	1
	2
	3
\<Source Statistics Descriptor\>	Integer type, specifies characteristics of the source of the submitted SDUs for a PDP context
	<u>0</u> Characteristics of SDUs is unknown
	1 Characteristics of SDUs corresponds to a speech source
\<Signalling Indication\>	Integer type, indicates signaling content of submitted SDUs for a PDP context.
	<u>0</u> PDP context is not optimized for signaling
	1 PDP context is optimized for signaling **\<PDP_type\>**

10.7. AT+CGACT   Activate or Deactivate PDP Context

The AT+CGACT write command is used to activate or deactivate the specified PDP context(s). After the command has completed, the MT remains in V.250 command state. If any PDP context is already in the requested state, the state for that context remains unchanged. If the MT is not PS attached when the activation form of the command is executed, the MT first performs a PS attach and then attempts to

activate the specified contexts. If no **<cid>** specifies the activation/deactivation form of the command, it will activate or deactivate all defined contexts.

AT+CGACT Activate or Deactivate PDP Context	
Test Command **AT+CGACT=?**	Response **+CGACT:** (list of supported **<state>**s) **OK**
Read Command **AT+CGACT?**	Response **[+CGACT:<cid>,<state>[<CR><LF>** **+CGACT: <cid><state>[…]]]** **OK**
Write Command **AT+CGACT=<state>,<cid>**	Response **OK** **NO CARRIER** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	150s, determined by network.
Reference 3GPP TS 27.007	

Parameter

<state>	Indicates the state of PDP context activation
	0 Deactivated
	1 Activated
	Other values are reserved and will result in an **ERROR** response to the Write Command
<cid>	A numeric parameter which specifies a particular PDP context definition (see **+CGDCONT** command)

Example

AT+CGDCONT=1,"IP","UNINET"	//Define PDP context
OK	
AT+CGACT=1,1	//Activated PDP
OK	
AT+CGACT=0,1	//Deactivated PDP
OK	

10.8. AT+CGDATA   Enter Data State

The AT+CGDATA write command causes the MT to perform whatever actions are necessary to establish communication between the TE and the network using one or more packet domain PDP types. This may include per-forming a PS attach and one or more PDP context activations. Commands following the AT+CGDATA command in the AT command line will not be processed by the MT.

If the **<L2P>** parameter value is unacceptable to the MT, the MT shall return an ERROR or +CME ERROR response. Otherwise, the MT issues the intermediate result code CONNECT and enters V.250 online data state. After data transfer is complete, and the layer 2 protocol termination procedure has completed successfully, the command state is reentered and the MT returns the final result code OK.

AT+CGDATA Enter Data State	
Test Command **AT+CGDATA=?**	Response **+CGDATA:** (list of supported **<L2P>**s) **OK**
Write Command **AT+CGDATA=<L2P>[,<cid>[,<cid>[,…]]]**	Response **CONNECT** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<L2P>	A string parameter that indicates the layer 2 protocol to be used between the TE and MT:
	PPP Point to Point protocol for a PDP such as IP
	PAD Character stream for X.25 character (triple X PAD) mode (Obsolete)
	X25 X.25 L2 (LAPB) for X.25 packet mode (Obsolete)
	M-OPT-PPP MS supports manufacturing specific protocol
	M-HEX MS supports manufacturing specific protocol
	M-RAW_IP MS supports manufacturing specific protocol
	Other values are not supported and will result in an **ERROR** response to the execution command
<cid>	A numeric parameter which specifies a particular PDP context definition (see **+CGDCONT** command)

10.9. AT+CGPADDR Show PDP Address

The AT+CGPADDR write command returns a list of PDP addresses for the specified context identifiers. If no **<cid>** is specified, the addresses for all defined contexts are returned.

AT+CGPADDR Show PDP Address	
Test Command **AT+CGPADDR=?**	Response **+CGPADDR:[** (list of defined **<cid>**s)**]** **OK**
Write Command **AT+CGPADDR=<cid>[,<cid>[,…]]**	Response **+CGPADDR: <cid>,<PDP_addr>** **[+CGPADDR: <cid>,<PDP_addr>[…]]** **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<cid>	A numeric parameter which specifies a particular PDP context definition (see **+CGDCONT** command)
<PDP_addr>	A string that identifies the MT in the address space applicable to the PDP. The address may be static or dynamic. For a static address, it will be the one set by the **+CGDCONT** command when the context was defined. For a dynamic address it will be the one assigned during the last PDP context activation that used the context definition referred to **<cid>**. **<PDP_address>** is omitted if none is available

Example

AT+CGDCONT=1,"IP","UNINET"	//Define PDP context
OK	
AT+CGACT=1,1	//Activated PDP
OK	
AT+CGPADDR=1	//Show PDP address
+CGPADDR: 1,"10.76.51.180"	

OK

10.10. AT+CGCLASS   GPRS Mobile Station Class

AT+CGCLASS is used to set the MT to operate according to the specified mode of operation, see 3GPP TS 23.060.

AT+CGCLASS GPRS Mobile Station Class	
Test Command **AT+CGCLASS=?**	Response **+CGCLASS:** (list of supported **<class>**s) **OK**
Read Command **AT+CGCLASS?**	Response **+CGCLASS: <class>** **OK**
Write Command **AT+CGCLASS=<class>**	Response **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<class>	A string parameter which indicates the GPRS mobile class (Functionality in descending order) "A" Class A "B" Class B "CG" Class C in GPRS only mode "CC" Class C in circuit switched only mode

10.11. AT+CGREG   Network Registration Status

The AT+CGREG command queries the network registration status and controls the presentation of an unsolicited result code **+CGREG: <stat>** when **<n>**=1 and there is a change in the MT's packet domain network registration status in GERAN/UTRAN, or unsolicited result code **+CGREG: <stat>[,[<lac>],[<ci>],[<AcT>],[<rac>]]** when <n>=2 and there is a change of the network cell in GERAN/UTRAN.

AT+CGREG Network Registration Status	
Test Command **AT+CGREG=?**	Response **+CGREG:** (list of supported **<n>**s) **OK**
Read Command **AT+CGREG?**	Response **+CGREG: <n>,<stat>[,<lac>,<ci>[,<Act>]]** **OK**
Write Command **AT+CGREG=[<n>]**	Response **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<n>	<u>0</u>	Disable network registration unsolicited result code
	1	Enable network registration unsolicited result code **+CGREG:<stat>**
	2	Enable network registration and location information unsolicited result code **+CGREG: <stat>[,<lac>,<ci>[,<Act>]]**
<stat>	0	Not registered, MT is not currently searching an operator to register to .The UE is in GMM state GMM-NULL or GMM-DEREGISTERED-INITIATED. The packet domain service is disabled, the UE is allowed to attach for packet domain if requested by the user.
	1	Registered, home network .The UE is in GMM state GMM-REGISTERED or GMM-ROUTING-AREA-UPDATING-INITIATED INITIATED on the home PLMN.
	2	Not registered, but MT is currently trying to attach or searching an operator to register to. The UE is in GMM state GMM-DEREGISTERED or GMM-REGISTERED-INITIATED. The packet domain service is enabled, but an

		allowable PLMN is currently not available. The UE will start a packet domain attach as soon as an allowable PLMN is available.
	3	Registration denied. The UE is in GMM state GMM-NULL. The packet domain service is disabled, the UE is not allowed to attach for packet domain if requested by the user.
	4	Unknown
	5	Registered, roaming
<lac>		String type, two bytes location area code in hexadecimal format (e.g. "00C3" equals to 195 in decimal)
<ci>		String type, 16 bit (GSM) or 28 bit (UMTS) cell ID in hexadecimal format
<Act>		Access technology selected
	0	GSM
	2	UTRAN

10.12. AT+CGEREP   Packet Domain Event Reporting

Set command enables or disables sending of unsolicited result codes +CGEV: XXX from MT to TE in the case of certain events occurring in the Packet Domain MT or the network. **<mode>** controls the processing of unsolicited result codes specified within this command. **<bfr>** controls the effect on buffered codes when **<mode>** 1 or 2 is entered.

AT+CGEREP Packet Domain Event Reporting	
Test Command **AT+CGEREP=?**	Response **+CGEREP:** (list of supported **<mode>**s),(list of supported **<bfr>**s) **OK**
Read Command **AT+CGEREP?**	Response **+CGEREP: <mode>,<bfr>** **OK**
Write Command **AT+CGEREP=mode[,<bfr>]**	Response **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Execution Command **AT+CGEREP**	Response **OK**
Maximum Response Time	300ms

Reference
3GPP TS 27.007

Parameter

<mode>	0	Buffer unsolicited result codes in the MT; if MT result code buffer is full, the oldest ones can be discarded. No codes are forwarded to the TE.
	1	Discard unsolicited result codes when MT-TE link is reserved (e.g. in on-line data mode); otherwise forward them directly to the TE.
	2	Buffer unsolicited result codes in the MT when MT-TE link is reserved (e.g. in on-line data mode) and flush them to the TE when MT-TE link becomes available; otherwise forward them directly to the TE.
<bfr>	0	MT buffer of unsolicited result codes defined within this command is cleared when **<mode>** 1 or 2 is entered.
	1	MT buffer of unsolicited result codes defined within this command is flushed to the TE when **<mode>** 1 or 2 is entered (OK response shall be given before flushing the codes).

NOTES

The unsolicited result codes and the corresponding events are defined as follows:

1. **+CGEV: NW DEACT <PDP_type>,<PDP_addr>,[<cid>]**: The network has requested a context reactivation. The **<cid>** used to reactivate the context is provided if known to the MT.
2. **+CGEV: ME DEACT <PDP_type>,<PDP_addr>,[<cid>]**: The mobile equipment has forced a context deactivation. The **<cid>** used to activate the context is provided if known to the MT.
3. **+CGEV: NW DETACH**: The network has forced a Packet Domain detach. This implies that all active contexts have been deactivated. These are not reported separately.
4. **+CGEV: ME DETACH**: The mobile equipment has forced a Packet Domain detach. This implies that all active contexts have been deactivated. These are not reported separately.
5. **+CGEV: NW CLASS <class>**: The network has forced a change of MS class. The highest available class is reported (see AT+CGCLASS).
6. **+CGEV: ME CLASS <class>**: The mobile equipment has forced a change of MS class. The highest available class is reported (see AT+CGCLASS).

Example

AT+CGEREP=?
+CGEREP: (0-2),(0,1)

OK
AT+CGEREP?
+CGEREP: 0,0

OK

10.13. AT+CGSMS   Select Service for MO SMS Messages

AT+CGSMS specifies the service or service preference that the MT will use to send MO (mobile originated) SMS messages.

AT+CGSMS Select Service for MO SMS Messages	
Test Command **AT+CGSMS=?**	Response **+CGSMS:** (list of currently available **<service>**s) **OK**
Read Command **AT+CGSMS?**	Response **+CGSMS: <service>** **OK**
Write Command **AT+CGSMS=[<service>]**	Response **OK** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<service>	A numeric parameter which indicates the service or service preference to be used
	0 Packet domain
	1 Circuit switch
	2 Packet domain preferred (use circuit switched if packet domain service not available)
	3 Circuit switch preferred (use packet domain if circuit switched not available)

11 Supplementary Service Commands

11.1. AT+CCFC   Call Forwarding Number and Conditions Control

AT+CCFC allows control of the call forwarding supplementary service according to 3GPP TS 22.082. Registration, erasure, activation, deactivation and status query are supported.

AT+CCFC Call Forwarding Number and Conditions Control	
Test Command **AT+CCFC=?**	Response **+CCFC:** (list of supported **<reads>**s) **OK**
Write Command **AT+CCFC=<reads>,<mode>[,<number>[,<type>[,<class>[,<subaddr>[,<satype>[,time]]]]]]**	Response TA controls the call forwarding supplementary service. Registration, erasure, activation, deactivation, and status query are supported. Only ,**<reads>** and **<mode>** should be entered with mode (0-2,4) If **<mode><>**2 and command successful **OK** If **<mode>**=2 and command successful (only in connection with **<reads>** 0-3) For registered call forwarding numbers: **+CCFC: <status>, <class1>[, <number>, <type>[,<subaddr>,<satype>[,<time>]]]** **[<CR><LF><CR><LF>+CCFC: ....]** **OK** If no call forwarding numbers are registered (and therefore all classes are inactive): **+CCFC: <status>, <class>** **OK** where **<status>**=0 and **<class>**=15

	If error is related to ME functionality:
	+CME ERROR: <err>
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<reads>	0	Unconditional
	1	Mobile busy
	2	No reply
	3	Not reachable
	4	All call forwarding (0-3)
	5	All conditional call forwarding (1-3)
<mode>	0	Disable
	1	Enable
	2	Query status
	3	Registration
	4	Erasure
<number>	Phone number in string type of forwarding address in format specified by **<type>**	
<type>	Type of address in integer format; default value is 145 when dialing string includes international access code character "+", otherwise 129	
<subaddr>	String type sub-address of format specified by **<satype>**	
<satype>	Type of sub-address in integer	
<class>	1	Voice
	2	Data
	4	FAX
	7	All telephony except SMS
	8	Short message service
	16	Data circuit sync
	32	Data circuit async
<time>	1…30	When "no reply" (**<reads>**=no reply) is enabled or queried, this gives the time in seconds to wait before call is forwarded, default value is 20
<status>	0	Not active
	1	Active

Example

AT+CCFC=0,3,"15021012496"	//Register the destination number for unconditional call forwarding (CFU)
OK	
AT+CCFC=0,2	//Query the status of CFU without specifying **<class>**
+CCFC: 1,1,"+8615021012496",145,,,	

OK
AT+CCFC=0,4   //Erase the registered CFU destination number
OK
AT+CCFC=0,2   //Query the status, no destination number
+CCFC: 0,255

OK

11.2. AT+CCWA   Call Waiting Control

The AT+CCWA command allows control of the call waiting supplementary service according to 3GPP TS 22.083. Activation, deactivation and status query are supported.

AT+CCWA Call Waiting Control	
Test Command **AT+CCWA=?**	Response **+CCWA:** (list of supported **<n>**s) **OK**
Read Command **AT+CCWA?**	Response **+CCWA: <n>** **OK**
Write Command **AT+CCWA=[<n>[,<mode>[,<class>]]]**	Response TA controls the call waiting supplementary service. Activation, deactivation and status query are supported. If **<mode>**<>2 and command successful: **OK** If **<mode>**=2 and command successful: **+CCWA: <status>,<class1>[<CR><LF><CR><LF>+CCWA: <status>,<class2>[...]]** **OK** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<n>	0	Disable presentation of an unsolicited result code
	1	Enable presentation of an unsolicited result code
<mode>	When **<mode>** parameter is not given, network is not interrogated	
	0	Disable
	1	Enable
	2	Query status
<class>	A sum of integers, each integer represents a class of information	
	1	Voice (telephony)
	2	Data (bearer service)
	4	FAX (facsimile)
	16	Data circuit sync
	32	Data circuit async
<status>	0	Disable
	1	Enable
<number>	Phone number in string type of calling address in format specified by **<type>**	
<type>	Type of address octet in integer format	
	129	Unknown type (IDSN format number)
	145	International number type (ISDN format)
<alpha>	Optional string type alphanumeric representation of **<number>** corresponding to the entry found in phone book	
<CLI_validity>	Integer type	
	0	CLI valid
	1	CLI has been withheld by the originator
	2	CLI is not available due to interworking problems or limitations of originating network

NOTES

1. **<status>**=0 should be returned only if service is not active for any **<class>** i.e. +CCWA: 0, 7 will be returned in this case.
2. When **<mode>**=2, all active call waiting classes will be reported. In this mode the command is aborted by pressing any key.
3. Unsolicited result code:
   When the presentation call waiting at the TA is enabled (and call waiting is enabled) and a terminating call set up during an established call, an unsolicited result code is returned:
   +CCWA: <number>,<type>,<class>,[<alpha>],<CLI_validity>

Example

```
AT+CCWA=1,1                          //Enable presentation of an unsolicited result code
OK
ATD10086;                            //Establish a call
OK
```

+CCWA: "02154450293",129,1,,0	//Indication of a call that has been waiting

11.3. AT+CHLD   Call Related Supplementary Services

The AT+CHLD command allows the control of the following call related services:

- A call can be temporarily disconnected from the MT but the connection is retained by the network;
- Multiparty conversation (conference calls);
- The served subscriber who has two calls (one held and the other either active or alerting) can connect the other parties and release the served subscriber's own connection.

Calls can be put on hold, recovered, released and added to a conversation, and transferred similarly as defined in 3GPP TS 22.030.

This is based on the GSM/UMTS supplementary services HOLD (Call Hold; refer to 3GPP TS 22.083 clause 2), MPTY (Multi Party; refer to 3GPP TS 22.084) and ECT (Explicit Call Transfer; refer to 3GPP TS 22.091). The interaction of this command with other commands based on other GSM/UMTS supplementary services is described in the GSM/UMTS standards. Call Hold, Multi Party and Explicit Call Transfer are only applicable to teleservice 11.

AT+CHLD Call Related Supplementary Services	
Test Command **AT+CHLD=?**	Response **+CHLD:** (list of supported **<n>**s) **OK**
Write Command **AT+CHLD[=<n>]**	Response TA controls the supplementary services call hold, multiparty and explicit call transfer. Calls can be put on hold, recovered, released, added to conversation and transferred. **OK** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<n>	0	Terminate all held calls or UDUB (User Determined User Busy) for a waiting call. If a call is waiting, terminate the waiting call. Otherwise, terminate all held calls (if any)
	1	Terminate all active calls (if any) and accept the other call (waiting call or held call). It can terminate active call if there is only one call
	1X	Terminate the specific call number X
	2	Place all active calls on hold (if any) and accept the other call (waiting call or held call) as the active call
	2X	Place all active calls except call X on hold
	3	Add the held call to the active calls
	4	Connects the two calls and disconnects the subscriber from both calls (ECT)

Example

```
ATD10086;                              //Establish a call
OK

+CCWA: "02154450293",129,1             //Indication of a call that has been waiting
AT+CHLD=2                              //Place the active call on hold and accept the waiting call as
                                         the active call
OK
AT+CLCC
+CLCC: 1,0,1,0,0,"10086",129           //The first call on hold

+CLCC: 2,1,0,0,0,"02154450293",129     //The second call be active

OK
AT+CHLD=21                             //Place the active call except call X=1 on hold
OK
AT+CLCC
+CLCC: 1,0,0,0,0,"10086",129           //The first call be active

+CLCC: 2,1,1,0,1,"02154450293",129     //The second call on hold

OK
AT+CHLD=3                              //Add a held call to the active calls in order to set up a
                                         conference (multiparty) call
OK
AT+CLCC
+CLCC: 1,0,0,0,1,"10086",129

+CLCC: 2,1,0,0,1,"02154450293",129
```

OK

11.4. AT+CLIP   Calling Line Identification Presentation

AT+CLIP refers to the GSM/UMTS supplementary service CLIP (Calling Line Identification Presentation) that enables a called subscriber to get the calling line identity (CLI) of the calling party when receiving a mobile terminated call.

AT+CLIP Calling Line Identification Presentation	
Test Command **AT+CLIP=?**	Response **+CLIP:** (list of supported **\<n>**s) **OK**
Read Command **AT+CLIP?**	Response **+CLIP: \<n>,\<m>** **OK**
Write Command **AT+CLIP=\<n>**	Response TA enables or disables the presentation of the calling line identity (CLI) at the TE. It has no effect on the execution of the supplementary service CLIP in the network. **OK** If error is related to ME functionality: **+CME ERROR: \<err>**
Maximum Response Time	15s, determined by network.
Reference 3GPP TS 27.007	

Parameter

\<n>	<u>0</u>	Suppress unsolicited result codes
	1	Display unsolicited result codes
\<m>	0	CLIP not provisioned
	1	CLIP provisioned
	2	Unknown
\<number>		Phone number in string type of calling address in format specified by **\<type>**
\<subaddr>		String type subaddress of format specified by **\<satype>**
\<satype>		Type of subaddress octet in integer format (refer to 3GPP TS 24.008 [8] subclause

10.5.4.8)

\<type\>	Type of address octet in integer format;	
	129	Unknown type (IDSN format number)
	145	International number type (ISDN format)
\<alpha\>	String type alphanumeric representation of **\<number\>** corresponding to the entry found in phone book	
\<CLI validity\>	0	CLI valid
	1	CLI has been withheld by the originator
	2	CLI is not available due to interworking problems or limitations of originating network

---

NOTE

Unsolicited result code:

When the presentation of the CLIP at the TE is enabled (and calling subscriber allows), an unsolicited result code is returned after every RING (or **+CRING: \<type\>**) at a mobile terminating call:

+CLIP: \<number\>,\<type\>,[subaddr],[satype],[\<alpha\>],\<CLI validity\>

Example

AT+CLIP=1
OK

RING

+CLIP: "02151082965",129,,,,0

11.5. AT+CLIR   Calling Line Identification Restriction

AT+CLIR refers to the CLIR supplementary service (Calling Line Identification Restriction) according to 3GPP TS 22.081 and the OIR supplementary service (Originating Identification Restriction) according to 3GPP TS 24.607) that allows a calling subscriber to enable or disable the presentation of the calling line identity (CLI) to the called party when originating a call.

AT+CLIR Calling Line Identification Restriction	
Test Command **AT+CLIR=?**	Response **+CLIR:** (list of supported **\<n\>**s) **OK**
Read Command **AT+CLIR?**	Response **+CLIR: \<n\>,\<m\>**

	OK
Write Command **AT+CLIR=<n>**	Response TA restricts or enables the presentation of the calling line identity (CLI) to the called party when originating a call. The command overrides the CLIR subscription (default is restricted or allowed) when temporary mode is provisioned as a default adjustment for all following outgoing calls. This adjustment can be revoked by using the opposite Command. **OK** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	15s, determined by network.
Reference 3GPP TS 27.007	

Parameter

<n>	Parameter sets the adjustment for outgoing calls	
	<u>0</u>	Presentation indicator is used according to the subscription of the CLIR service
	1	CLIR invocation
	2	CLIR suppression
<m>	Parameter shows the subscriber CLIR service status in the network	
	0	CLIR not provisioned
	1	CLIR provisioned in permanent mode
	2	Unknown (e.g. no network, etc.)
	3	CLIR temporary mode presentation restricted
	4	CLIR temporary mode presentation allowed

11.6. AT+COLP   Connected Line Identification Presentation

AT+COLP refers to the GSM/UMTS supplementary service COLP (Connected Line Identification Presentation) that enables a calling subscriber to get the connected line identity (COL) of the called party after setting up a mobile originated call. The command enables or disables the presentation of the COL at the TE. It has no effect on the execution of the supplementary service COLR in the network.

AT+COLP Connected Line Identification Presentation	
Test Command **AT+COLP=?**	Response **+COLP:** (list of supported **<n>**s)

	OK
Read Command **AT+COLP?**	Response **+COLP: <n>,<m>** **OK**
Write Command **AT+COLP=<n>**	Response TA enables or disables the presentation of the COL (Connected Line) at the TE for a mobile originating a call. It has no effect on the execution of the supplementary service COLR in the network. Intermediate result code is returned from TA to TE before any +CR or V.25ter responses. **OK**
Maximum Response Time	15s, determined by network.
Reference 3GPP TS 27.007	

Parameter

<n>	Parameter sets/shows the result code presentation status in the TA
	0 Disable
	1 Enable
<m>	Parameter shows the subscriber COLP service status in the network
	0 COLP not provisioned
	1 COLP provisioned
	2 Unknown (e.g. no network, etc.)
<number>	Phone number in string type, format specified by **<type>**
<type>	Type of address octet in integer format
	129 Unknown type (IDSN format number)
	145 International number type (ISDN format)
<subaddr>	String type sub-address of format specified by **<satype>**
<satype>	Type of sub-address octet in integer format (refer to 3GPP TS 24.008 sub clause 10.5.4.8)
<alpha>	Optional string type alphanumeric representation of **<number>** corresponding to the entry found in phone book

NOTE

Intermediate result code:

When enabled (and called subscriber allows), an intermediate result code is returned before any +CR or V.25ter responses:

+COLP: <number>,<type>,[<subaddr>],[<satype>] ,[<alpha>]

Example

AT+COLP=1
OK
ATD02151082965;
OK

+COLP: "02151082965",129,,,

11.7. AT+CSSN   Supplementary Service Notifications

AT+CSSN refers to supplementary service related network initiated notifications. The write command enables/disables the presentation of notification result codes from TA to TE.

AT+CSSN Supplementary Service Notifications	
Test Command **AT+CSSN=?**	Response **+CSSN:** (list of supported **<n>**s),(list of supported **<m>**s) **OK**
Read Command **AT+CSSN?**	Response **+CSSN: <n>,<m>** **OK**
Write Command **AT+CSSN=<n>[,<m>]**	Response **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

\<n\>	Integer type, parameter sets/shows the +CSSI intermediate result code presentation status to the TE
	<u>0</u> Disable
	1 Enable
\<m\>	Integer type (parameter sets/shows the **+CSSU** unsolicited result code presentation status to the TE)
	<u>0</u> Disable
	1 Enable
\<code1\>	Integer type, it is manufacturer specific, which of these codes are supported
	0 Unconditional call forwarding is active
	1 Some of the conditional call forwardings are active
	2 Call has been forwarded
	3 Waiting call is pending
	5 Outgoing call is barred
\<code2\>	Integer type, it is manufacturer specific, which of these codes are supported
	0 The incoming call is a forwarded call
	2 Call has been put on hold (during a voice call)
	3 Call has been retrieved (during a voice call)
	5 Held call was terminated by other party
	10 Additional incoming call forwarded

NOTES

1. When **\<n\>**=1 and a supplementary service notification is received after a mobile originated call setup, the **+CSSI** intermediate result code is sent to TE before any other MO call setup result codes:
   +CSSI: \<code1\>
2. When **\<m\>**=1 and a supplementary service notification is received during a mobile terminated call setup or during a call, the **+CSSU** unsolicited result code is sent to TE:
   +CSSU: \<code2\>

11.8. AT+CUSD   Unstructured Supplementary Service Data

AT+CUSD allows control of the Unstructured Supplementary Service Data (USSD) according to 3GPP TS 22.090. Both network and mobile initiated operations are supported.

Parameter **\<mode\>** is used to disable/enable the presentation of an unsolicited result code. The value **\<mode\>**=2 is used to cancel an ongoing USSD session. For an USSD response from the network, or a network initiated operation, the format is: **+CUSD: \<status\>[,\<rspstr\>,[\<dcs\>]]**.

When **<reqstr>** is given, a mobile initiated USSD string or a response USSD string to a network initiated operation is sent to the network. The response USSD string from the network is returned in a subsequent **+CUSD** URC.

AT+CUSD Unstructured Supplementary Service Data	
Test Command **AT+CUSD=?**	Response **+CUSD:** (list of supported **<mode>**s) **OK**
Read Command **AT+CUSD?**	Response **+CUSD: <mode>** **OK**
Write Command **AT+CUSD=<mode>[,<reqstr>[,<dcs>]]**	Response **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	120s, determined by network.
Reference 3GPP TS 27.007	

Parameter

<mode>	Integer type, sets/shows the result code presentation status to the TE
	<u>0</u> Disable the result code presentation to the TE
	1 Enable the result code presentation to the TE
	2 Cancel session (not applicable to read command response)
<reqstr>	Unstructured Supplementary Service Data (USSD) to be sent to the network. If this parameter is not given, network is not interrogated.
<rspstr>	Unstructured Supplementary Service Data (USSD) received from the network.
<dcs>	Integer type, 3GPP TS 23.038 Cell Broadcast Data Coding Scheme (default 15)
<status>	USSD response from the network or the network initiated operation
	0 No further user action required (network initiated USSD Notify, or no further information needed after mobile initiated operation)
	1 Further user action required (network initiated USSD Request, or further information needed after mobile initiated operation)
	2 USSD terminated by network
	3 Other local client has responded
	4 Operation not supported
	5 Network time out

12 Audio Commands

12.1. AT+CLVL   Loud Speaker Volume Level

AT+CLVL is used to select the volume of the internal loudspeaker of the MT.

AT+CLVL Loud Speaker Volume Level	
Test Command **AT+CLVL=?**	Response **+CLVL:** (list of supported**<level>**s) **OK**
Read Command **AT+CLVL?**	Response **+CLVL: <level>** **OK**
Write Command **AT+CLVL=<level>**	Response **OK** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<level>   Integer type, value (0-100) with manufacturer specific range (Smallest value represents the lowest sound level), the default value of mode 0 is 80, the default value of mode 1 is 70, the default value of mode 2 is 50.

NOTE

This parameter will not be saved.

12.2. AT+CMUT   Mute Control

AT+CMUT is used to enable and disable the uplink voice muting during a voice call.

AT+CMUT Mute Control	
Test Command **AT+CMUT=?**	Response **+CMUT:** (list of supported**<n>**s) **OK**
Read Command **AT+CMUT?**	Response **+CMUT: <n>** **OK**
Write Command **AT+CMUT=<n>**	Response **OK** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<n>	<u>0</u>	Mute off
	1	Mute on

> **NOTE**
>
> This parameter will not be saved.

12.3. AT+CALM   Mute the Ring Tone

AT+CALM is used to mute the ring tone. There is no ring tone when a call is coming.

AT+CALM Mute the Ring Tone	
Test Command **AT+CALM=?**	Response **+CALM:** (list of supported **<n>**s)

	OK
Read Command **AT+CALM?**	Response **+CALM: <n>** **OK**
Write Command **AT+CALM=<on>**	Response **OK** **ERROR**
Maximum Response Time	300ms

Parameter

<n>	Numeric type
	<u>0</u> Ring tone is normal
	1 Ring tone is mute

> **NOTE**
>
> This parameter will not be saved.

12.4. AT+CRSL   Set Ring Tone Volume

AT+CRSL can be used to set the volume of ring tone.

AT+CRSL Set Ring Tone Volume	
Test Command **AT+CRSL=?**	Response **+CRSL:** (list of supported **<level>**s) **OK**
Read Command **AT+CRSL?**	Response **+CRSL: <level>** **OK**
Write Command **AT+CRSL=<level>**	Response **OK** **ERROR**

Maximum Response Time	300ms

Parameter

\<level\>	Numeric type, indicates the configured volume of ring tone .
	Range: 0-100, the default value of mode 0 is 80, the default value of mode 1 is 50, the default value of mode 2 is 80.

NOTE

This parameter will not be saved.

12.5. AT+QAUDLOOP   Enable Audio Loop Test

This command is used to enable audio loop test.

AT+QAUDLOOP Enable Audio Loop Test	
Test Command **AT+QAUDLOOP=?**	Response **+QAUDLOOP: (0,1),(0-2)** **OK**
Read Command **AT+QAUDLOOP?**	Response **+QAUDLOOP: \<enable\>,\<path\>** **OK**
Set Command **AT+QAUDLOOP=\<enable\>[,\<path\>]**	Response **OK** **ERROR**
Maximum Response Time	300ms

Parameter

\<enable\>	Numeric type; to enable or disable audio loop test
	0 Disable audio loop test
	1 Enable audio loop test
\<path\>	Compatible argument, no effect

NOTE

These parameters will not be saved.

12.6. AT+VTS   DTMF and Tone Generation

The AT+VTS command is used to send ASCII characters which causes MSC to transmit DTMF tones to a remote subscriber. This command can only be operated in voice call.

AT+VTS DTMF and Tone Generation	
Test Command **AT+VTS=?**	Response **+VTS: (0-9,A-D,*,#),(0-255)** **OK**
Write Command **AT+VTS=<dtmfstring>[,<duration>]**	Response **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	Depends on the length of **<dtmfstring>** and **<duration>**.
Reference 3GPP TS 27.007	

Parameter

<dtmfstring>	ASCII characters in the set 0...9,#,*, A, B, C, D. The string should enclose in quotation marks ("...") When sending multiple tones at a time, the time interval of two tones **<interval>** specified by **+VTD**. The maximal length of the string is 31
<duration>	The duration of each tone in 1/10 seconds with tolerance Value ranges from 0 to 255 and default is 0 If the duration is less than the minimum value depend on the network, the actual duration is depend on the network If this parameter is omitted, **<duration>** is specified by **+VTD**

Example

ATD12345678900;   //Dial
OK

<Call connect>

AT+VTS="1"   //The remote can listen to DTMF tone
OK
AT+VTS="1234567890A"   //Send multiple tones at a time
OK

12.7. AT+VTD   Set Tone Duration

AT+VTD sets the duration of DTMF tones. This command can also set time interval of two tones when sending multiple tones at a time.

AT+VTD Set Tone Duration	
Test Command **AT+VTD=?**	Response **+VTD: (0-255),(0-255)** **OK**
Read Command **AT+VTD?**	Response **+VTD: <duration>,<interval>** **OK**
Write Command **AT+VTD=<duration>[,<interval>]**	Response **OK** **ERROR** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<duration>	The duration tone in 1/10 seconds with tolerance. Value ranges from 0 to 255 and default is 1. If the duration is less than the minimum time specified by the network, the actual duration will be network specified time.
<interval>	The time interval of two tones when sending multiple tones at a time by **+VTS**. Value ranges from 0 to 255 and default is 0.

This parameter will not be saved.

12.8. AT+QDAC   Digital Audio Configure

AT+QDAC is used to configure the digital audio interface. While **<io>**=1, you can define the PCM interface by themselves; while **<io>**=2, and the external codec chip linked with PCM interface is the NUA8814 model through the I2C, while **<io>**=3, and the external codec chip linked with PCM interface is the ALC5616 model through the I2C, the module can be used directly and set by the default configurations.

AT+QDAC Digital Audio Configure	
Test Command **AT+QDAC=?**	Response **+QDAC:(1-3),(0),(0-8),(0-2),(0,1),(0,1)** **OK**
Read Command **AT+QDAC?**	Response **+QDAC:<io>[,<mode>,<sample_rate>,<data_length>,<channel_mode>,<data_format>]** **OK**
Write Command **AT+QDAC=<io>[,<mode>,<sample_rate>,<data_length>,<channel_mode>,<data_format>]**	Response **OK** **ERROR**
Maximum Response Time	300ms

Parameter

<io>	<u>1</u>	Digital PCM output (Customer defined)
	2	Analog output (For our default audio codec NAU8814)
	3	Analog output (For our default audio codec ALC5616)
<mode>	<u>0</u>	Master mode
<sample_rate>	<u>0</u>	8K
	1	11K
	2	12K
	3	16k
	4	22K

	5	24K
	6	32K
	7	44K
	8	48K
<data_length>	0	16-bit
	1	24-bit
	2	32-bit
<channel_mode>	0	Mono
	1	Stereo
<data_format>	0	PCM
	1	I2S

NOTES

1. Configuration of **<io>** will be saved to NV immediately by default.
2. The module provides clock, and the clock depends on **<sample_rate>** and **<data_length>**.
3. When you select ALC5616 or NUA8814, please do not input other parameters and the PCM interface is set by the default configurations.

12.9. AT+QLTONE   Play a Local Customized Tone

AT+QLTONE is used to play a customized tone, use **<period_on>** to indicate play time, **<period_off>** to indicate mute time, and **<duration>** to indicate total time.

AT+QLTONE Play a Local Customized Tone	
Test Command **AT+QLTONE=?**	Response **+QLTONE: (0,1),(100-3900),(0-1000),(0-1000),(0-15300000)** **OK**
Write Command **AT+QLTONE=<mode>[,<frequency>,<period_on>,<period_off>,<duration>]**	Response **OK** **+CME ERROR: <err>** After playing completed, report: **+QLTONE: 0**
Maximum Response Time	300ms

Parameter

<mode>	0	Stop play
	1	Start play
<frequency>	Tone's frequency, unit: Hz, range: 100-3900	
<period_on>	Tone's on time, unit: ms, range: 0-1000	
<period_off>	Tone's mute time, unit: ms, range: 0-1000	
<duration>	Tone's total time, unit: ms, range: 0-15300000	

NOTE

This parameter will not be saved.

Example

AT+QLTONE=?   //Query the range.
+QLTONE: (0,1),(100-3900),(0-1000),(0-1000),(0-15300000)

OK
AT+QLTONE=1,1000,200,300,3000   //Play a 1000Hz tone, on time is 200ms, mute time is 300ms, total time is 3000ms.

OK

+QLTONE:0
AT+QLTONE=0   //Stop playing.
OK

12.10. AT+QLDTMF   Play Local DTMF

AT+QLDTMF is used to play a DTMF string, maximum length is 20 characters. You can use AT+QLDTMF to stop it.

AT+QLDTMF Play Local DTMF	
Test Command **AT+QLDTMF=?**	Response **+QLDTMF: (1-1000),(0-9,A-G,*,#)** **OK**
Write Command **AT+QLDTMF=<n>,<DTMF_string>[,<y>]**	Response **OK** **+CME ERROR: <err>**

	After playing completed, report: **+QLDTMF: 5**
Execute Command **AT+QLDTMF**	Response **OK**
Maximum Response Time	300ms

Parameter

<n>	Numeric type, indicates every DTMF's on time and mute time. Ranges: 1-1000, the unit is 1/100 second when **<y>** is set to 1; or 1/10 second when **<y>** is not set.
<DTMF_string>	String type, max 20 DTMFs, separated by comma. DTMFs: 0-9, A-G, #, *

NOTE

This parameter will not be saved.

Example

```
AT+QLDTMF=?              //Query the range.
+QLDTMF: (1-1000),(0-9,A-G,*,#)

OK
AT+QLDTMF=2,"1,2,#"      //Play 1, 2, # on time & mute time is 200ms.
OK

+QLDTMF: 5
AT+QLDTMF                //Stop playing.
OK
```

12.11. AT+QWDTMF   Play/Send DTMF Tone(s)

This command is used to play or send DTMF tone(s).

AT+QWDTMF Play/Send DTMF Tone(s)	
Test Command **AT+QWDTMF=?**	Response **+QWDTMF:** **(0,1),(0,1),("<DTMF_code>,<continuance_time>,<mute_time>[,...]")**

	OK
Set Command **AT+QWDTMF=<ul_mute>,<dl_mute>,** **("DTMF_code>,<continuance_time>,<** **mute_time>[,...]")**	Response **OK** **+CME ERROR: <err>** After playing completed, report: **+QWDTMF: 5**
Maximum Response Time	300ms

Parameter

<ul_mute>	Numeric type, mute uplink or not
	0 Mute
	1 Not mute
<dl_mute>	Numeric type, mute downlink or not
	0 Mute
	1 Not mute
<DTMF_code>	String type, max 20 DTMFs
	0 DTMF 0
	1 DTMF 1
	2 DTMF 2
	3 DTMF 3
	4 DTMF 4
	5 DTMF 5
	6 DTMF 6
	7 DTMF 7
	8 DTMF 8
	9 DTMF 9
	A DTMF A
	B DTMF B
	C DTMF C
	D DTMF D
	E DTMF E
	F DTMF F
	G DTMF G
	* DTMF *
	# DTMF #
<continuance_time>	Numeric type, indicates duration of each DTMF tone. Unit: ms, range: 0-10000.
<mute_time>	Numeric type, indicates mute time. Unit: ms, ranges: 0-10000.

> **NOTE**
>
> This parameter will not be saved.

Example

```
AT+QWDTMF=?                            //Query the range.
+QWDTMF: (0,1),(0,1),("<DTMF_code>,<continuance_time>,<mute_time>[,...]")

OK
AT+QWDTMF=1,1,"1,1000,10,2,1000,2"     //Play 1, 2 both uplink and downlink
OK

+QWDTMF: 5
AT+QWDTMF=0,1,"1,1000,10"              //Only Play 1 on downlink
OK

+QWDTMF: 5
```

13 Hardware Related Commands

13.1. AT+QPOWD Power Off

The command AT+QPOWD is used to shut down the module. The UE will return OK immediately when the command is executed. Then the UE deactivates the network. After it is completed, the UE outputs the message "POWERED DOWN" and sets the STATE pin as low to enter into the shutdown state. The maximum time for network log-off is 60 seconds. In order to avoid data loss, it is only allowed to turn off the UE power after the module's STATE pin is set as low and the URC "POWERED DOWN" is outputted. If "POWERED DOWN" has not been received after 65s, you should force to switch off the VBAT.

AT+QPOWD Power Off	
Test Command AT+QPOWD=?	Response +QPOWD: (0,1) OK
Execute Command AT+QPOWD[=<n>]	Response OK POWERED DOWN
Maximum Response Time	300ms

Parameter

<n>	0	Immediately power down
	<u>1</u>	Normal power down

13.2. AT+CCLK Clock

AT+CCLK sets and queries the real time clock (RTC) of the module. The current setting is retained until the module is totally disconnected from power.

AT+CCLK Clock	
Test Command **AT+CCLK=?**	Response **OK**
Read Command **AT+CCLK?**	Response **+CCLK: <time>** **OK**
Write Command **AT+CCLK=<time>**	Response **OK** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<time>	String type value, format is "yy/MM/dd,hh:mm:ss±zz", indicate year (two last digits), month, day, hour, minutes, seconds and time zone (indicates the difference, expressed in quarters of an hour, between the local time and GMT; range -48...+56). E.g. May 6th, 1994, 22:10:00 GMT+2 hours equals to "94/05/06,22:10:00+08"

Example

AT+CCLK?   //Query the local time
+CCLK: "08/01/04, 00:19:43+00"

OK

13.3. AT+CBC   Battery Charge

AT+CBC returns battery connection status **<bcs>** and battery charge level **<bcl>** of the MT.

AT+CBC Battery Charge	
Test Command **AT+CBC=?**	Response **+CBC:** (list of supported **<bcs>**s),(list of supported **<bcl>**s),(**voltage**)

	OK
Execution Command **AT+CBC**	Response **+CBC: <bcs>,<bcl>,<voltage>** **OK** If error is related to ME functionality: **+CME ERROR: <err>**
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<bcs>	Charge status	
	0	ME is not charging
	1	ME is charging
	2	Charging has finished
	3	Recognized power fault, calls inhibited
<bcl>	Battery connection level	
	0...100	Battery has 0-100 percent of capacity remaining vent
<voltage>	Battery voltage (mV)	

13.4. AT+QSCLK Configure Whether or not to Enter into Sleep Mode

AT command AT+QSCLK is used to control the module whether or not to enter into sleep mode.

AT+QSCLK Configure Whether or not to Enter into Sleep Mode	
Test Command **AT+QSCLK=?**	Response **+QSCLK:** (list of supported **<n>**s) **OK**
Read Command **AT+QSCLK?**	Response **+QSCLK: <n>** **OK**
Write Command **AT+QSCLK=<n>**	Response **OK**
Maximum Response Time	300ms

Parameter

\<n\>	0	Disable slow clock
	1	Enable slow clock, it is controlled by DTR

14.5. Summary of CME ERROR Codes

Final result code **+CME ERROR: <err>** indicates an error related to mobile equipment or network. The operation is similar to **ERROR** result code. None of the following commands in the same command line is executed. Neither **ERROR** nor **OK** result code shall be returned.

<err> values are mostly used by common message commands. The following table lists most of general and GRPS related **ERROR** Codes. For some GSM protocol failure cause described in GSM specifications, the corresponding **ERROR** codes are not included.

Table 10: Different Coding Schemes of +CME ERROR: <err>

Code of <err>	Meaning
0	Phone failure
1	No connection to phone
2	Phone-adaptor link reserved
3	Operation not allowed
4	Operation not supported
5	PH-SIM PIN required
6	PH-FSIM PIN required
7	PH-FSIM PUK required
10	SIM not inserted
11	SIM PIN required
12	SIM PUK required
13	SIM failure
14	SIM busy
15	SIM wrong
16	Incorrect password
17	SIM PIN2 required
18	SIM PUK2 required
20	Memory full
21	Invalid index
22	Not found
23	Memory failure
24	Text string too long
25	Invalid characters in text string

26	Dial string too long
27	Invalid characters in dial string
30	No network service
31	Network timeout
32	Network not allowed - emergency calls only
40	Network personalization PIN required
41	Network personalization PUK required
42	Network subset personalization PIN required
43	Network subset personalization PUK required
44	Service provider personalization PIN required
45	Service provider personalization PUK required
46	Corporate personalization PIN required
47	Corporate personalization PUK required
48	Hidden key required
49	EAP method not supported
50	Incorrect parameters
100	Unknown
103	Illegal MS
106	Illegal ME
107	GPRS service not allowed
111	PLMN not allowed
112	Location area not allowed
113	Roaming not allowed in this location area
132	Service not supported
133	Service not subscribed

134	Service option temporarily out of order
148	Unspecified GPRS error
149	PDP authentication error
150	Invalid mobile class
201	Alternate SIM conflict
500	CTS Handover on Progress
501	Cellular Protocol Stack Out of service state
502	CTS Unspecified Error
800	SIM Security unspecified error

14.6. Summary of CMS ERROR Codes

Final result code **+CMS ERROR: <err>** indicates an error related to mobile equipment or network. The operation is similar to ERROR result code. None of the following commands in the same command line is executed. Neither **ERROR** nor **OK** result code shall be returned.

<err> values are mostly used by common message commands:

Table 11: Different Coding Schemes of +CMS ERROR: <err>

Code of <err>	Meaning
1	Unassigned (unallocated) number
8	Operator determined barring
10	Call barred
17	Network failure
21	Short message transfer rejected
22	Memory capacity exceeded
27	Destination out of order (service)

28	Unidentified subscriber
29	Facility rejected
30	Unknown subscriber
38	Network out of order (service)
41	Temporary failure
42	Congestion
47	Resource unavailable unspecified
50	Requested facility not subscribed
69	Requested facility not implemented
81	Invalid short message transfer reference value
95	Semantically incorrect message
96	Invalid Mandatory Information
97	Message-type non-existent or not implemented
98	Message not compatible with short message protocol state
99	Information element non-existent or not implemented
111	Protocol error unspecified
127	Interworking unspecified
128	Telematic interworking not supported (MO)
129	Short message type 0 not supported (MO/MT)
130	Cannot replace short message (MO/MT)
143	Unspecified TP-PID error (MO/MT)
144	Data coding scheme (alphabet) not supported (MO)
145	Message class not supported (MT)
159	Unspecified TP-DCS error (MO/MT)
160	Command cannot be actioned (MO)

161	Command unsupported (MO)
175	Unspecified TP-Command error (MO)
176	TPDU not supported (MO/MT)
192	Service centre (SC) busy (MO)
193	No SC subscription (MO)
194	SC system failure (MO)
195	Invalid short message entity (SME) address (MO)
196	Destination SME barred (MO)
197	SM rejected duplicated SM (MO)
198	TP-VPF (validity period format) not supported (MO)
199	TP-VP (validity period) not supported (MO)
208	(U)SIM SMS storage full (MT)
209	No SMS storage capability in (U)SIM (MT)
210	Error in MS (MT)
211	Memory capacity exceeded (MT)
212	(U)SIM application toolkit busy (MT)
213	(U)SIM data download error (MT)
255	Unspecified error cause (MO/MT)
287	Network failure unspecified
290	Network no resource
300	ME failure
301	SMS ME reserved
302	Operation not allowed
303	Operation not supported
304	Invalid PDU mode

305	Invalid text mode
310	SIM not inserted
311	SIM pin necessary
312	PH SIM pin necessary
313	SIM failure
314	SIM busy
315	SIM wrong
320	Memory failure
321	Invalid memory index
322	Memory full
330	SMSC address unknown
331	No network
332	Network timeout
340	NO CNMA acknowledgement expected
500	Unknown
512	This and the following codes are manufacturer specific. Relay path Acknowledgement
513	SMS timer expired
514	SMS forwarding availability failed
515	SMS forwarding availability aborted
516	Invalid TP-MESSAGE-Type indicator
517	No TP-Status report in phase 1
518	No TP-Reject-Duplicate in phase 1
519	No TP-Reply-Path in phase 1
520	No TP-User-Data-Header in phase 1
521	Missing TP-Validity-Period

522	Invalid TP-Service-Centre-Time-Stamp
523	Missing TP-Destination-Address
524	Invalid TP-Destination-Address
525	Missing Service-Centre-Address
526	Invalid Service-Centre-Address
527	Invalid alphabet
528	Invalid TP-User-Data-Length
529	Missing TP-User-Data
530	TP-User-Data too long (large)
531	No command request in phase 1
532	Command request invalid TP-Destination address
533	Command request invalid TP-User-Data length
534	Command request invalid TP-User-Data
535	Command request invalid TP-Command-Type
536	MN MNR creation failed
538	MS Network connection lost
539	Pending MO SM transfer
540	MO SMS rejected by SIM MO SMS control
541	RP ERROR OK
542	RP ERROR OK no icon display
543	FDN check failed
544	Service centre address (SCA) FDN failed
545	Destination address (DA) FDN failed
546	BDN check failed
547	Unspecified SMS PP error

548	No route to destination
549	Channel unacceptable
555	No circuit/channel available
556	Access information discarded
557	Requested circuit/channel not available by other side
558	Quality of service unavailable
560	Bearer capability not authorized
561	Bearer capability not presently available
562	Service or option not available, unspecified
563	Bearer service not implemented
564	ACM equal to or greater than ACM max
565	Only restricted digital information bearer capability is available
566	Service or option not implemented, unspecified
567	User not member of CUG
568	Incompatible by destination
569	Invalid transit network selection
571	Message not compatible with protocol state
572	Recovery on timer expiry
576	Data call active
577	Speech call active
579	MOC setup rejected due to missing ACM info
580	Temporary forbidden call attempt
581	Called party is blacklisted
583	Temporary forbidden call attempt no service
584	Temporary forbidden call attempt limited service

585	Client temporary barred
586	Dual service call active
587	Atc Fclass not speech
590	Client not registered
591	Active client gone
595	Rejected by call control
601	Invalid ALS line
604	MM no service (out of coverage)
605	MM access class barred (RR_REL_IND During RR Conn. Establishment
606	ME busy -CM service request already pending
608	Rejected due to SUP timer expiry
609	Rejected due to USSD busy
610	Rejected due to SS busy
612	SIM toolkit request is rejected, because another SIM toolkit request is pending
614	Rejected because SIM toolkit request Is not yet answered by the user
615	MN setup SS error
616	Call controller blocked (Other Call Command Pending
618	Environment parameter not set correctly (Fclass/Cmod)
619	Other blocking call present
620	Lower Layer Failure
621	The authentication procedure failed
622	The packet-switched registration procedure failed
623	CM service reject from the network
624	The ABORT message was received from the network

625	Timer expiry
626	IMSI detach was initiated
627	Normal RR connection release (2G)
628	Registration failed
630	Failure due to handover
631	Link establishment failure
632	Random access failure
633	Radio link aborted
634	Lower layer failure in layer 1
635	Immediate assignment reject
636	Failure due to paging
637	Abnormal release unspecified
638	Abnormal release channel unacceptable
639	Abnormal release timer expired
640	Abnormal release no act on radio path
641	Preemptive release
642	UTRAN configuration unknown
643	Handover impossible
644	Channel mode unacceptable
647	Lower layer failure from NW
649	Conditional IE error
650	No cell allocation available
653	Re-establishment reject
654	Directed Sigconn Re-establishment
656	Release of RRC connection without network activity (3G) lower layer failure downlink

657	Lower layer failure uplink
658	Cell barred due to authentication failure
659	Signaling connection release
660	CS connection release triggered by MM
661	RRC connection establishment failure
662	RRC connection establishment reject with redirection
663	Resource conflict
664	Layer failure in layer 2
665	L2 cause T200 expiry N200 plus 1 Times
669	RR connection release due to BAND change (2G)
670	Release of the RRC connection due to out of service in Cell_Fach (3G)
671	Release of the RRC connection due to not matching PLMN in shared networks (3G)
672	Error Happens while call Is already disconnected/late error
674	SIM toolkit cannot initiate a call, because MMI is not registered
675	SIM toolkit call setup request is rejected due user did not accept
676	Proactive SIM appl terminated by user
677	SIM toolkit originated SIM reset (Refresh Request)
680	Dial string/number incorrect

14.7. Summary of URC

Table 12: Summary of URC

Index	URC Display	Meaning	Condition
1	RDY	ME initialization is successful	N/A
2	+CFUN: 1	All function of the ME is available	N/A

3	+CPIN: \<state\>	SIM card pin state	N/A
4	+QUSIM: 0	Use SIM card	N/A
5	+QUSIM: 1	Use USIM card	N/A
6	+QIND: SMS DONE	SMS initialization finished	N/A
7	+QIND: PB DONE	Phonebook initialization finished	N/A
8	POWERED DOWN	Module power down	AT+QPOWD
10	+CREG: \<stat\>	Indicate registration status of the ME	AT+CREG=1
11	+CREG: \<stat\>[,\<lac\>,\<ci\>[,\<Act\>]]	After cell neighborhood changing shows whether the network has currently indicated the registration of the ME, with location area code	AT+CREG=2
12	+CGREG: \<stat\>	Indicate network registration status of the ME	AT+CGREG=1
13	+CTZV: \<tz\>	Time zone reporting	AT+CTZR=1
14	+CTZE: \<tz\>,\<dst\>,\<time\>	Extended time zone reporting	AT+CTZR=2
15	+CMTI: \<mem\>,\<index\>	New message is received, and saved to memory	See AT+CNMI
16	+CMT: [\<alpha\>],\<length\>\<CR\>\<LF\>\<pdu\>	New short message is received and output directly to TE (PDU mode)	See AT+CNMI
17	+CMT: \<oa\>,[\<alpha\>],\<scts\>[,\<tooa\>,\<fo\>,\<pid\>,\<dcs\>,\<sca\>,\<tosca\>,\<length\>]\<CR\>\<LF\>\<data\>	New short message is received and output directly to TE (Text mode)	See AT+CNMI
18	+CBM: \<length\>\<CR\>	New CBM is received and output directly (PDU mode)	See AT+CNMI
19	+CBM: \<sn\>,\<mid\>,\<dcs\>,\<page\>,\<pages\>,\<CR\>,\<LF\>\<data\>	New CBM is received and output directly to TE (Text mode)	See AT+CNMI
20	+CDS:\<length\>\<CR\>\<LF\>\<pdu\>	New CDS is received and output directly (PDU mode)	See AT+CNMI
21	+CDS:\<fo\>,\<mr\>,[\<ra\>],[\<tora\>],\<scts\>,\<dt\>,\<st\>	New CDS is received and output directly to TE (Text mode)	See AT+CNMI
22	+COLP: \<number\>,\<type\>,[\<subaddr\>],[\<satype\>],[\<alpha\>]	The presentation of the COL(connected line) at the TE for a mobile originated call	AT+COLP=1

23	+CLIP: <number>,<type>,[subaddr],[satype],[<alpha>],<CLI validity>	Mobile terminating call indication	AT+CLIP=1
24	+CRING: <type>	An incoming call is indicated to the TE with unsolicited result code instead of the normal RING	AT+CRC=1
25	+CCWA: <number>,<type>,<class>[,<alpha>]	Call waiting indication	AT+CCWA=1,1
26	+CSSI: <code1>	Shows the +CSSI intermediate result code presentation status to the TE	AT+CSSN=1
27	+CSSU: <code2>	Shows the +CSSU unsolicited result code presentation status to the TE	AT+CSSN=<n>,1
28	+CUSD: <status>[,<rspstr>,[<dcs>]]	USSD response from the network, or a network initiated operation	AT+CUSD=1
29	+QSIMSTAT: 1,<inserted_status>	Indicate SIM card inserted or removed	AT+QSIMSTAT=1
30	+CGEV: NW DEACT <PDP_type>, <PDP_addr>, [<cid>]	The network has forced a context deactivation	AT+CGEREP=2,1
31	+CGEV: ME DEACT <PDP_type>, <PDP_addr>, [<cid>]	The ME has forced a context deactivation.	AT+CGEREP=2,1
32	+CGEV: NW DETACH	The network has forced a Packet Domain detach	AT+CGEREP=2,1
33	+CGEV: ME DETACH	The mobile equipment has forced a Packet Domain detach	AT+CGEREP=2,1
34	+CGEV: NW CLASS <class>	The network has forced a change of MS class	AT+CGEREP=2,1
35	+CGEV: ME CLASS <class>	The mobile equipment has forced a change of MS class	AT+CGEREP=2,1

14.8. Parameter List of AT+CEER

Table 13: Cause and Description List of AT+CEER

Cause	Description
0	No cause information available
1	Unassigned (unallocated) number
3	No route destination
6	Channel unacceptable
8	Operator determined barring
16	Normal call clearing
17	User busy
18	No user responding
19	User alerting, no answer
21	Call rejected
22	Number changed
26	Non selected user clearing
27	Destination out of order
28	Invalid number format (incomplete number)
29	Facility rejected
30	Response to STATUS ENQUIIRY
31	Normal, unspecified
34	No circuit /channel available
38	Network out of order
41	Temporary failure
42	Switching equipment congestion
43	Access information discarded

44	Requested circuit/channel not available
47	Resources unavailable, unspecified
49	Quality of service unavailable
50	Requested facility not subscribed
55	Incoming calls barred within the CUG
57	Bearer capability not authorized
58	Bearer capability not presently available
63	Service or option not available, unspecified
65	Bearer service not implemented
68	ACM equal to or greater than ACM max
69	Requested facility not implemented
70	Only restricted digital information bearer capability is available
79	Service or option not implemented, unspecified
81	Invalid transaction identifier value
87	user not member of CUG
88	Incompatible destination
91	Invalid transit network selection
95	Semantically incorrect message
96	Invalid mandatory information
97	Message type non-existent or not implemented
98	Message type not compatible with protocol state
99	Information element non-existent or not implemented
100	Conditional IE error
101	Message not compatible with protocol state
102	Recovery on timer expiry
103	Illegal MS

106	Illegal ME
107	GPRS service not allowed
111	protocol error, unspecified
112	Location area not allowed
113	Roaming not allowed in this location area
124	MBMS bearer capabilities insufficient for the service
125	LLC or SNDCP failure
126	Insufficient resources
127	Missing or unknown APN
128	Unknown PDP address or PDP type
129	User authentication failed
130	Activation rejected by GGSN
131	Activation reject, unspecified
132	Service not supported
133	Requested service option not subscribed
134	Service option temporarily out of order
135	NSAPI already used
136	Regular PDP context deactivation
137	QoS not accepted
138	Network failure
139	Reactivation requested
140	Feature not supported
141	Semantic error in the TFT operation
142	Syntactical error in the TFT operation
143	Unknown PDP context
144	Semantic errors in packet filter(s)

145	Syntactical errors in packet filter(s)
146	PDP context without TFT already activated
148	Unspecified GPRS error
149	PDP authentication error
212	APN restriction
256	Internal unspecified
257	Out of memory
258	Invalid parameters
259	Data call active
260	Speech call active
262	Missing ACM information
263	Temporary forbidden
264	Called party is blacklisted
265	Blacklist is full
266	No Service
267	Limited service
268	Client conflict
269	Dual Service call active
271	Unknown SIM error
274	Active Client is Gone
277	SIM status failure
278	Rejected by call control
279	FDN failed
280	BDN failed
283	CCBS possible
284	Invalid alternate service line

285	LND overview
287	MM network failure unspecified
288	MM no service
289	MM access class barred
290	MM RR no resource
291	MM ME busy
292	MM unspecified
301	MMI not registered
303	Rejected by user
304	Rejected due to time out
306	Disconnected due to SIM TK call setup
307	Pending SIM TK call setup
310	SIM reset
340	MM sapi3 release
341	MM lower layer failure
342	MM authentication failure
343	MM PS reject
344	MM service rejected
345	MM abort by network
346	MM timeout
347	MM detach
348	MM RR connection release
349	MM not registered
350	MM reestablishment failure
351	Failure due to handover
352	Link establishment failure

353	Random access failure
354	Radio link aborted
355	Lower layer failure in Layer 1
